As practically all breeds made an excellent average production during this contest as well as in the previous contests, this indicates that most any breed of poultry can be kept at a profit when the proper feed and care are given them. The mash used during the contest consisted of the following: 25 pounds bran, 25 pounds shorts, 30 pounds corn meal, 10 pounds ground oats, 12 pounds beef scraps, and 1½ pounds fine salt. A moistened mash was fed each morning throughout the year, while a dry mash was kept in hoppers before them all the time. The grain feed consisted of 50 pounds cracked corn and 50 pounds whole wheat. The principal grain feed was given them in the evening, allowing the birds to consume all the grain they wanted. The average mash consumed per hen for the year was 41.6 pounds, at an average cost of $1.82 per 100 pounds for the year. Each hen consumed an average of 40.9 pounds of grain at an average price of $1.64 per 100 pounds for the year. All feeds were bought on the local retail market.

The total feed consumed per hen for the year was 82.5 pounds at an average cost of $1.43 per hen. Straw for litter, oyster shell, and cases for shipping eggs averaged approximately 32 cents per hen, or a total expense of $1.75 per hen for the year. The average production for the year was 193.6 eggs per hen. These eggs were sold to commission merchants at an average price of 30 cents per dozen for the year. The sale of eggs from each hen averaged $4.80, leaving a profit of $2.05 per hen for the year above the cost of feed, oyster shell, etc.

The feed ration used constitutes as nearly as possible a balanced ration, supplying the needs of the laying hen. Impractical methods, which sometimes force egg production, that cannot be followed by farmers and poultrymen in general are not used in the contest. The substantial gain in the egg yield this year is another demonstration showing the value of better breeding, practical methods of feeding and housing, and general management.

# Poultry Queries

(Conducted by Jean A. Koethen)

### Marketing Turkeys

Can you give me information as to marketing turkeys so as to get the highest price for them? Should I ship to commission houses or sell to local buyers? Should I dress or sell them alive? When is the price higher, at Thanksgiving or Christmas?—Subscriber, Orland.

The best way to market turkeys is direct to the consumer. This may be done by judicious advertising some time ahead and is easy if the producer happens to be on or near a highway When cost of shipping is considered there is very little difference between selling to local buyers and shipping to larger markets. Unless you can sell to your neighbors or to private consumers within a short distance you will have to sell your birds alive. Five cents a pound is usually added to the live weight price if birds are dressed. Thanksgiving and Christmas prices are usually about the same. The nearer home you can sell your birds the better, for shipping is expensive.

### Selecting Turkey Hens

Please tell me how to select turkey hens for their laying qualities.—Subscriber, Wasco.

As turkeys are bred for meat rather than for eggs fecundity is not so important as in chicken hens, but vigor is its foundation as it is with chickens. Use no turkey hen as a breeder that is not vigorous and healthy. She should also be of fair size and weight. Keep scrubs and undersized birds out of the breeding pen. Other things being equal, the hen that lays earliest is the one that will lay most eggs. The hen that begins to lay in November should be a more valuable breeder than one that does not begin till January, but remember, vigor is the first and vital test.

### Brooder for Turks

I have a 500 chick Reliable brooder. Do you know whether baby turkeys can be successfully hovered under it? —Subscriber, Wasco.

I am not acquainted with this make of brooder, but turkeys can be hovered under anything that will keep them warm enough. They seem to require more heat and longer than chicks.

### Mating Turkeys

Would you advise mating a two year old 34 pound tom turkey with 13 of his own daughters? The hens will be a year old at mating time. What constitutes inbreeding?—Subscriber, San Diego.

A successful breeder told me not long ago that she would not again use a tom that weighed over 25 pounds. This is because the hens are so often injured by heavy toms. Aside from the weight of the tom, I doubt if such a mating is desirable. The relationship is too close. Inbreeding is the mating of birds that are closely related. Theoretically tom and hens should be absolutely unrelated stock in order to produce vigorous offspring. In practice there is a good deal of inbreeding, but it is the mating of birds of different lines of the same stock rather than those closely related. That is to say, suppose this year you buy a tom of entirely unrelated blood and mate him to those 13 hens. Next year you might mate a son of one of the hens to the daughters of the others and vice versa. In this way you start two lines which gradually get farther and farther away from the parent stock and less and less related.

### Rhode Island Whites

I should like to know more about R. I. Whites. Do you think they are really superior to R. I. Reds? Where can I get hatching eggs at a reasonable price?—Lenore Hartman, Puente.

Will some one who has R. I.White eggs for hatching kindly communicate with Miss Hartman. As I am quite partial to R. I. Reds I cannot give an unbiased opinion, but I presume the Whites are just as good.

### Brooder House

We wish to build a brooder house for at least 250 chicks. Can roofing paper be used?—Subscriber, Wasco.

Tarred roofing paper makes a very good brooder house if it is of good quality and has a solid foundation of lumber. The house should face south and have large openings to admit the sun during the day and shutters or screens to use at night.

### Laying Mash

Will you kindly let me know if this is a good balanced mash for laying hens?— 18 sacks Terripe bran; 7 sacks ground barley, 4 sacks ground milo, 2 sacks cottonseed meal, 2 sacks ground bone, 5 sacks fish meal, 100

# MORE EGGS NOW AT 65c A DOZEN

**Poultry Raisers Doubling Daily Egg Production Without Extra Expense**

Eggs are scarce and prices steadily going higher. Every poultry raiser can greatly increase and maintain the daily egg production of the entire flock all winter by using Imperial Egg Tonic.

All that is necessary is to occasionally drop a few of these highly concentrated tablets in the fowls' drinking water. This standard, time-tested remedy acts as a splendid tonic and blood purifier, stimulating the egg production qualities. Starts hens and pullets laying faster than ever. Every day you put off using Imperial Egg Tonic you are delaying big egg production. Start now to get your share of these high prices all winter.

## YOU CAN GET YOURS FREE

Send no money. Just your name and address to Imperial Laboratories, Dept. 5101, Kansas City, Mo., and they will send you by return mail, two regular $1.00 size packages of Imperial Egg Tonic (double strength). Pay the postman only $1.00 and a few cents' postage when they arrive. Enough for yourself and neighbor. Your $1.00 refunded on request, if not pleased, any time within 30 days.

## 100,000 Chicks Died Last Night — Roup Killed Them

That's probably true, for that means only one death to every 64 farms in America—a ridiculously small average during Roup time. Millions of chickens killed yearly by this terrible disease. Don't let Roup get a start. Stop it quickly with

# Poultrymen's Guide

The value of chickens and eggs produced in California (1919 census) was $34,727,935.00. There is poultry on 92,409 farms in the state—78.5 of all farms. January 1, 1920, poultry of all kinds on farms in California numbered 10,811,183, a gain of 4,723,916 since 1910, indicating the rapid and important development of the industry. At the present prices of eggs, hens and baby chicks and the big demand upon hatcheries for more stock it is wise to order early. The representative advertisers whose announcements appear below are recommended to prospective purchasers.

### LIVESTOCK

Weekly summary, Saturday, November 25, 1922, furnished by Federal-State Livestock Market News Service, 1028 Pacific Finance Building, Los Angeles.

Cattle: Liberal receipts resulted in lower price scale. Beef steers declined 25 and cows as much as 50 to 75 cents during the period. Feeder steers did not suffer, due to buying orders.

The 8.00 mark was reached Thursday on a load of good 1141 pound Colorado steers. A string of good 1062 pound Orange County steers brought 8.00, weighed off cars at a local packing house, late last week. Good 1117 pound Inyo County steers Thursday scored 7.75 at the yards, a price duplicated on Wyoming bullocks. Other shipments of medium and good steers during the week ranged from 6.80 to 7.50. Common steers cleared as low as 5.75 to 6.10, with Mexicans on the cutter order at 4.35.

Strictly good 1171 pound Utah cows brought 5.60 Tuesday but 5.50 was the top Friday, this price being paid for 56 good 1026 pound Wyoming cows. Bulk of beef cows cleared from 4.25 to 5.00, with common kinds at 3.50 and canners 2.00 to 2.50. Bologna bulls cleared largely from 3.25 to 4.00.

Calves: Practically no good or choice calves arrived, bulk coming from Texas and Arizona and selling from 6.00 to 7.25. Weights ran mostly from 240 to over 300 pounds. Common culls sold as low as 5.00.

Hogs: Hog prices broke sharply, due partly to lower Eastern prices but largely to a plentiful supply in the city, the result of the easing up of the railroad car situation. Good 162 pound Utah hogs brought 10.00 Monday but 9.00 to 9.25 took bulk of good grain fed hogs Thursday. Heavy packing cows cleared from 7 00 to 8.00.

Sheep and Lambs: Active demand prevailed for the few lambs offered. Two loads of choice 86 pound Inyo County lambs sold straight for 13.75 Thursday, and 778 Utah lambs, averaging 77 pounds, brought 13.50, with 27 wethers, averaging 116 pounds, at 7.50. Two doubles of medium quality Utah lambs sold straight at 12.50.—Nelson R. Crow, local representative.

At L. A. stockyards on Monday only:

Cattle: With moderate receipts Monday, the cattle market held about steady, with some sales showing strength. No strictly good cattle arrived. A string of 100 medium quality Wyoming cattle, averaging 1077 pounds sold at 7.00 with ten out at 6.00. Two loads of medium to good quality Utah cows averaging 1022 pounds brought 5.00, with a load of 790 pound Utah heifers at 5.50. Most of the cows were sold from 4½ to 5 cents with canners as low as 1.50. A few plain Arizona stocker steers averaging around 650 pounds sold at 4.25.

Calves: Calf market showed no change.

Hogs: Hog market was very slow. Killers attempted to regain part of last week's losses, but had little success up to a late hour. A string of 278 Texas hogs averaging 177 pounds sold at 9.00, a price duplicated on 336 Utah hogs averaging 253 pounds. Several other loads of hogs had not sold up to a late hour. A few 133 pound feeder pigs sold at 9.50.

Sheep and Lambs: No fresh arrivals, the market was nominally steady

Quotations, based upon actual sales at Los Angeles Union Stockyards, follow:

Cattle: Beef steers, good grade, 7.50@8.00; medium grade, 6.75@7.50; common grade, 5.75@6.75. Beef cows, good grade, 5.25@5.75; medium grade, 4.25@4.75; common grade, 3.75@ 4.25; canners and cutters, 1.50@3.25. Bologna and butcher bulls, 3.00@4.50.

Calves: 150 to 200 pounds, good and choice, 7.50@8.50; 200 to 250 pounds, good and choice, 7.25@8.00; 250 to 300 pounds, good and choice, 6.50@7.25; over 300 pounds, 5.00@6.50.

Hogs: Good and choice grain fed Californias, 150 to 200 pounds, 9.00@9.25; 200 to 250 pounds, 8.75@9.25; 250 to 300 pounds, 8.00@8.75; over 300 pounds, 7.50@8.00; smooth sows, 250 to 300 pounds, 7.50 @8.00; rough sows, 250 to 300 pounds, 7.00 @7.50; over 300 pounds, 6.00@7.00.

Sheep and Lambs: (Full wooled). Lambs, good and choice grade, 13.25@13.75; medium grade, 12.00@13.25; ewes, medium and good, 5.75@6.50; yearling wethers, medium and good 8.50@9.50; aged wethers, 7.00@7.50.

### POTATOES AND ONIONS

### POULTRY

Sales to Retailers: Below are listed averages of actual prices obtained between 7:30 and 9 o'clock the morning of November 25, by San Francisco jobbers from their sales to retailer, hotels, restaurants, cafeterias, etc. Slight fluctuations may be noted during the day's trading.

Broilers: 1 to 1¼ lbs., 33@36 per lb. 1½ to 1¾ lbs., 30@32 per lb. Colored, 28@ 30 per lb.

Fryers: Leghorn, 2 lbs., 28@30 per lb. Colored 2 to 3¼ lbs., 28@30 per lb.

Young Roosters: Colored, 3½ lbs. and up, 28@30 per lb. Staggy, showing spurs, 21@23 per lb.

Colored Old Roosters: 17@18 per lb. Leghorn old roosters: 14@15 per lb. Leghorn hens, 2½ to 3 lbs., 18@20 per lb. 3 lbs. and over, 24@27 per lb. Large colored hens, 29@31 per lb. Off stock, 27@28 per lb.

Ducks: Young, 23@25 per lb. Off stock, 15@20 per lb.

Geese: Young, 28@30 per lb. according to quality.

Live Turkeys: Old, 32@35 per lb. Spring, 38@40 per lb. Dressed turkeys, spring, 44@48; old hen, 43@47; gobblers, 40@45.

Belgian Hare: Live, 15@18 per lb. Dressed, 18@23 lb.

Jack Rabbits: 2@2.50 per doz.

Squabs: Live, fancy, 55@60 per lb. Common, 3.00@3.50 per doz. Old pigeons, 2.50 @3.50 per doz.

Guinea Fowls: Young, 8.00@10.00 per doz.

### LIVESTOCK

In reviewing conditions governing the local livestock market during the past week the Federal-State Livestock Market News Service says:

There has been practically no change in steer values this week. The arrival of several shipments of good Colorado steers showing a cost of 8 off cars here, reflects steady prices with last week's sales. Medium qualified steers from Utah, Colorado and Nevada sold steady with last week around 7.50, and some common qualified kinds turned at 6, with a few on the rough, oxenish order as low as 5.50. Very few California bullocks have arrived this week, but a few loads have been bought for early December delivery from 6.50 to 7 at the shipping point.

Fat cows are cashing from 5.75 to 6 off cars. One shipment of Colorado cows weighing around 1000 pounds went over the 6 mark, reflecting a stronger market than a week ago today. Bulls are selling from 25 to 50 cents higher than last week. Several loads this week showed a cost of from 4.25 to 4.50 delivered in San Francisco.

Feeder steers are changing hands at steady prices, mostly around 6, with an occasional sale reaching 6.25.

There has been an active demand for vealers throughout the week, with values strong to 25 cents higher than a week ago today. Two loads of good and choice lightweights cleared 8.25 off cars here and calves weighing up to 250 pounds are finding active outlet at 8.

The bulk of arrivals of lambs this week were from Nevada and Utah points and cashed at steady prices from 13.75 to 14 off cars here for good and choice wooled lambs weighing from 70 to 80 pounds. One string of choice Nevada lambs ran considerably over the 14 mark delivered here, but this was ont of line sale due to immediate needs of the local packer.

A string of Utah lambs in fair flesh weighing around 80 pounds at the shipping point cost 13.75 off cars here, and arrivals of California lambs weighing around 85-90 pounds turned from 13 to 13.50. Practically no ewes or wethers are arriving.

Cattle prices, per cwt. (delivered off cars from San Francisco)—Beef steers, good grade, 7.75@8; medium grade, 7@ 7.50; common grade, 5@6.75; beef cows, good grade, 5.75@6; medium grade, 5.25@ 5.50; common grade, 4@5; canners and cutters, 2@3.50; bologna bulls, 2.50@4.

Calves—150 to 200 pounds, good and choice, 7.75@8.25; 200 to 250 pounds, 7.50@ 7.75; 250 to 300 pounds, good and choice, 7@7.50; over 300 pounds, 5.50@6.50.

Hogs—Good and choice, grain fed, Californias, 150 to 200 pounds, 10.75@11.25; 200 to 250 pounds, 10.25@10.75; 250 to 300 pounds, 9@9.50; 300 pounds up, 8.50@9; smooth sows, 250 to 300 pounds, 7@7.50; rough sows, 250 to 300 pounds, 6@6.50; rough sows, over 300 pounds, 5@6.

Sheep and Lambs—Lambs, good and choice grades, 13.50@14; medium grades, 13@13.50; ewes, medium and good, 5.50@ 6.50; wethers, medium and good, 8.50@ 10.

## Snappy Notes on Livestock

**By A. L. Spellmeyer**

The reported prices of fat steers are up to 8.00 and down to 5.75, and fat cows from 5.50 down to canner cows at 2 cents, top lambs around the 13.75 mark.

Things happen like they used to happen. Those Kingman men who made range f. o. b. cars beef contract at 6.50 about two months ago had their troubles with gathering, and the butcher took 185, I am told, from the first drag, said the others were not what he expected and contracted and let the man rustle for a sale as best he could. One can't help wondering what would have happened if general markets had advanced a cent instead of declined.

I hear most of the Springerville stuff went south towards the Phoenix district and one party sold 1000 head elsewhere but left out some lots whose owners had been figuring on turning with them. One of these lots owned by Alex J. McKay and Love put them on the cars and shipped to the Globe yards Los Angeles where Mr. McKay states they will either feed or sell to grass men later when he shapes them up.

Word comes from Flagstaff that snow has tied things up and no more cattle there can be sold than already contracted.

Mr. Johnson of Wilcox states it is rather cold down in southern Arizona for this time of year but range conditions are good generally, and he expects better prices soon.

Prices on some northern cows and steers will probably discourage part of that volume for a while. If so and California has another rain soon these light grass cattle may be in better demand here in California.

In 20 years I have never seen the condition that seems to exist around California now. In 20 years I have never seen certain light cows and steers sell so low, although beef prices have been lower.

## VEGETABLE GARDEN IN NORTH

(Continued from Page 579)

Dutch in rows two feet apart on rich soil.

### Carrots

For succession sow French Forcing Chantenay and Half Long in rows 18 inches to two feet apart. They like a deep sandy loam in which a good supply of manure has been added.

### Cabbage

If strong plants of these were put out last month they should be well cultivated between the rows. There is still time to plant Early Winningstadt, Danish Ball Head or Jersey Wakefield.

### Spinach

Sow seeds of Dark Green Prickly and Bloomsdale Savoy in rows about two feet apart in well prepared soil. The New Zealand variety is also excellent as it spreads rapidly and can be cut very often.

### Asparagus

Roots of these may be secured and planted in beds which must be heavily manured. They should be planted three feet apart. The best varieties are Palmetto and Conover's Colossal.

### Berries

Still time to plant strawberries, raspberries and loganberries. The former are the most extensively grown and should be planted so they can be conveniently irrigated in rows 2½ feet apart at least 12 inches apart in the row. Banner, Brandywine and New Ettersburg, are excellent varieties. Among the raspberries are the Ranaree, Cuthbert and Superlative. They should be planted two feet apart in rows which should be at least three feet apart. Established plots should now be well dressed with manure.

### Parsley

Sow the Moss Curled very thinly in rows or broadcast on a well prepared bed.

### Radish

Sow Icicle, Chinese Winter and Giant Forcing in rows in fairly rich soil.

## POULTRY QUERIES

(Continued from Page 597)

pounds oil cake meal, 100 pounds charcoal, 25 pounds salt.—Subscriber, Glendale, Arizona.

I should omit the ground bone and half the cottonseed meal. Ground bone is not necessary for laying hens and is not contained in the mash used in the egg laying contests in this state. Cottonseed meal is not the best vegetable protein. Make it 100 pounds oil cake and 100 pounds cottonseed. Instead of 500 pounds fish meal I would use 200 pounds fish meal and 200 pounds beef scrap. This lessens the protein content somewhat but it is still high enough. It is difficult to keep hens healthy with a mash so rich in protein. With this mash you should use a scratch mixture that is at least one-third cracked corn. Make the other two-thirds wheat and barley and sprout some of the barley.

# What Hercules Will Do

Blasting between the rows in your orchard loosens up the hardpan, and allows the water to get to the roots.

Planting trees in blasted holes gives the tender roots a chance to grow rapidly.

For making new ditches or cleaning out old ones, there is nothing like

## *HERCULES FARM DYNAMITE*

It makes clean, V-shaped ditches, free from spoil-banks and saves you time and labor.

Hercules Dynamite removes stumps in a thorough and economical way, breaking them up into pieces convenient for handling.

*Send for this book— It is free.*

There are other uses for dynamite on the farm. Send for "Land Development"—a 75-page book which tells you all about it.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertisers.

## EDITORIALETTES

Photograph of some of the more recently introduced avocados which have come into bearing in this state is given on the cover. These fruits are: 1, Benik; 2, Cabnal; 3, Cantel; 4, Lamat; 5, Mayapan; 6, Nimlioh; 7, Pankay. These fruits are supposed to be the best, selected from 20 of the original lots secured by Wilson Popenoe of the foreign seed and plant introduction, U. S. D. A. Of these seven it is probable that No. 6, the Nimlioh, makes promise of greatest value in California. That particular fruit has grown to three pounds in weight though it is probable an average weight would be around two pounds.

* * *

F. W. Read, for the past three years chief of the bureau of standardization of the state department of agriculture, has resigned to take up on January 15 position with the California Fruit Exchange. He will be in charge of the newly created department of the exchange concerned with grading, standardization and inspection. Mr. Read is amply qualified for such an assignment since, in addition to his three years service along the same lines in California, he was for five years with the federal department in Eastern markets.

* * *

Wire comes from Chicago announcing honors to California because of the work of the livestock judging team of the Ontario Junior College. Owing to sickness of one member of the team the score for the entire team was materially lessened and eleventh place only was secured but highest honors were won by Wm. Armstrong, one member of the team, who secured first place in individual livestock judging. The International has brought judging teams from many sections of North America. Competition was fierce, and the boys deserve high honors because of their winnings.

## $6000 PER ACRE

A publication issued by one of the state's representative commercial bodies states that "some land was sold in California within the past few months at $6,000 per acre." Later it states: "It was not oil land; it was land carrying a bearing orchard." It is suggested that "that property was worth the $6,000 an acre paid for it." The article continues with many valuable tables favorable to California's high valuation and to the fact that California's climate, water and soil have a worth given to no other section of the world. The article closes with: "Therefore, when it appears that the laws of supply and demand have tagged California lands with what appear to be high prices it is a fairly good sign that the lands are paying their way even at the high prices."

We do not doubt the correctness of the statements as given in the publication but we must call attention to the abuse sometimes made of such statements. While it is true that favorably located land in the hands of a farmer of the highest intelligence, with favorable marketing conditions, may be made, and at times has been made, to pay as high as $6,000, there is an old time saying that "What has been done may be done again," and on that basis sales of real estate have been made which have led to heartaches and failures. Speculative prices which have been forced upon California lands and which result in the final burden coming upon agriculture are the cause of much unfavorable comment heard in the East.

As we said above, the figures which may be given as to productive values may be absolutely correct and yet they may be used to convey the impression that the impossible is still possible under the magic of California conditions. Let us encourage continued development by giving a living chance to the real farmer. A $6,000 an acre orchard is not everlasting. Many a real dirt orchardist has found that its profitable bearing life is all too short. It must ultimately be replaced and that must take years of time.

California has too often had its land dreams when reason was thrown aside and a wild rush made to secure at any cost a small parcel of its rich lands. We began our experience in California in the old 1886 boom, and we hope we may never see another. California's orchards are the wonder of the world in output, both as to quality and quantity. Reasonable use of this quality of ours will result in more permanent development than will overenthusiasm.

## SHOP EARLY

With Christmas coming on we are again reminded of the rush that usually occurs during the last few days preceding that date and are implored to "Shop early and avoid the rush."

The heavy demand for most all kinds of nursery stock, coupled with the very limited supply, make it imperative that those expecting to plant orchards next spring get busy and engage their stock before it is all sold or before the best grades are gone. It always pays to plant the best, and naturally that grade in all varieties is more or less limited, so that the planter who defers placing his order until planting time may be compelled to take second or third choice, and in a season like this may even have to put off planting until another year. There is nothing so disappointing as to get ready to plant an orchard, feeling sure that all you have to do is to go to your nurseryman and get what you want, and then find that he has been sold out of the variety you want for weeks and does not even know where it can be secured. You must then take some other variety, which may not be at all satisfactory or wait another year. In the meantime it is probably too late to put in any other crop and your land lies idle for the year. Besides you lose a year on your orchard.

If you expect to plant an orchard next spring, by all means secure your trees at once, then you can rest content in that respect, until planting time.

### CONVENTION BEGINS TUESDAY MORNING

Calling attention to a misprint in last week's issue George W. Ashley writes regarding the date of opening of the 55th state fruit growers convention. As noted on cover page of the same issue the convention opens Tuesday morning, December 12. Speaking of the importance of that day's program Mr. Ashley calls attention to the fact that the work of the first day of the convention has to do with transportation. The first number on the program is by Charles E. Virden, chairman of the transportation committee. Practically all of the remainder of Tuesday will be used in consideration of the transportation question. Amongst other speakers is President Sproul of the Southern Pacific.

### CALIFORNIA A LONG WINNER AT INTERNATIONAL

Wire from Chicago:

California has won on Poland China barrows under 350 pounds first, second and third; also first, second and reserve championship on pens; senior yearling Angus steer; third junior yearling Angus steer; second Hereford calf; second crossbred calf; first, also second, get of sire; champion steer herd of show; four firsts on pen of lambs, Shropshire, Hampshire, Southdown and crossbred; also champion college wether on Southdown lamb competing against reserve champion of show.—True.

## AT THE CONVENTION

It is possible the fireworks and fun which many think will attend the transportation discussion at the state convention at Sacramento next weeek will have largest place on the program. In any case it will be interesting. But we believe that effective plant and seed quarantine is the most important matter which will be presented at the convention. The only important fruit growing section of the world yet free from the most destructive of fruit flies is the North American continent. The most deadly pests affecting horticulture are the fruit flies. The worst of these is the so-called Mediterranean fruit fly, or Ceratitis capitata. This pest has spread over a large portion of the world within the last two years. Increasing commerce gives opportunity for its entrance into new fields. It is now in the Hawaiians to the west of us and the Bermudas to the east. Another fruit fly, the parent of the Mexican orange maggot, has been established for many years in southern Mexico.

California's agitation of the question and insistence on the more effective quarantine has resulted in protection to the entire country. Quarantine measures have, however, been expensive to carry out, and at the present moment there is fear that the expense factor may be given a consideration which will outweigh and the efficiency of quarantine forces be lowered. Washington is agitating an absolute fruit quarantine at all ports, and a meeting to discuss the question will be held at Washington almost immediately after the close of the state fruit growers convention. Heretofore eastern ports of this country have been open to all kinds of fruits from Mediterranean countries, the original home of the fruit fly. It has been thought that the fruit fly will not exist in a section which has the climate of New York. This may or may not be true, but it is also true that Mediterranean oranges received at New York are used in provisioning steamers that come in through the Panama Canal and dock at Los Angeles and San Francisco harbors. Only a few weeks ago one of the largest steamers entering Pacific ports showed several boxes of Mediterranean oranges in her ice box. Quarantine officers consigned them to the steamer's furnaces and no harm was done, but the question remains how long will it be until from some of these many infested sections there will be brought to us an infestation of this dreaded pest. It must be kept out at all hazards.

### PROHIBIT IMPORTATION OF FRUITS AND VEGETABLES

The secretary of agriculture has information that dangerous insects, including the Mediterranrean fruit fly (Ceratitis capitata) and other fruit flies new to and not heretofore distributed within the United States, occur in Europe, Asia, Africa, Australia, South America, Central America, and other countries, and that there is danger of bringing these pests into the United States with shipments of fruits and vegetables in the raw or unmanufactured state.

It appears necessary, therefore, to consider the restrictions or prohibitions which should be enforced to prevent the entry of such fruit flies with fruit and vegetables in the raw or unmanufactured state imported from all foreign countries and localities.

Notice is therefore given that a public hearing will be held at the department of agriculture, Washington, D. C., at 10 a. m., December 19, 1922, in order that any person interested in the proposed quarantine may appear and be heard either in person or by attorney.

# The Colorado River Compact

AFTER many days of executive sessions and much of contention on the part of "Upper States" and "Lower States" the compact has been signed. The date of signing should mark a milestone in the development of the Southwest. The compact has been so variously commented on and caused such diversity of action that the best commentary as to its real meaning is the compact itself. So we give it below entire.

Selfish interests are already organizing, and the strangest part of this is that George Maxwell seems to be leading this opposition. Maxwell has spent nearly a lifetime in working for reclamation and in the interests of the National Irrigation Congress. Why he has become so active against the people's interests is a question to which there is no immediate answer.

The compact has been signed by the delegates regularly appointed to the Santa Fe meeting. It is now necessary for the legislatures of the contracting states to approve, when the governor shall notify other governors and the president. Approval is also necessary by the congress of the United States. The fight is not over but it is to be hoped that the wisdom which brought the warring factions together at Santa Fe may yet succeed in securing approval of the contract. The text of the compact is:

* * *

**Commission Pact**

**Article 1.**—The major purposes of this compact are to provide for the equitable division and apportionment of the use of the waters of the Colorado River system, to establish the relative importance of different beneficial uses of water; to promote interstate comity; to remove causes of present and future controversies, and to secure the expeditious agricultural and industrial development of the Colorado River basin, the storage of its waters and the protection of life and property from floods.

To these ends the Colorado River basin is divided into two basins, and

(Continued on Page 611)

# Greater Quarantine Efficiency or Reduction in Fruit Quality and Quantity

By C. B. Messenger

FRUIT growers of the North American continent have been all too slow in awakening. For years they slept peacefully in the belief that the pests which are devastating orchards in other states "will never come to America," and "if they do come will not exist in our climate." "If they do exist they will be readily controlled by the efficiency of American sprays and gasses." The alarm clock has gone off so many times in the past third of a century that the awakening is fairly complete, that is, so far as the fruit growers are concerned.

There are a vast number of people, including a few importers, who have not yet begun to rub their eyes, nor will they make the least effort to see the great danger confronting them. Even some of the real "back to dirt" producers have been content with the practices "followed by dad."

The jolt which Californians got because of the introduction of San Jose scale, cottony cushion scale and innumerable other pests proved sufficiently alarming that under the leadership of Alexander Craw this state started its fight on the invaders more than 30 years ago. Appeal was made to the federal department of agriculture for assistance and so far as possible it was given. The powers of the federal government, however, were limited and agitation was started which resulted in the plant quarantine act of 1912. That did not become law until 14 years of vigorous fighting gave to the people of the East sufficient realization to overcome the opposition of the importers. This fight was aided by the ravages of the brown tail and gypsy moths, and more recently, the havoc made by the Japanese beetle in New Jersey and Pennsylvania. This pest seems to be supplied with a stomach which digests the strongest of poisons, and it grows fat and multiplies. The only control so far devised is gathering the pests in buckets or washtubs of oil. Even under that treatment it has persisted in increasing, especially along roadways where it boards passing automobiles and moves to new pastures, and the spread has been with the rapidity of a prairie fire. So far as can be learned the introduction of this pest was because of the introduction into New Jersey of a large shipment of Japanese plants consigned to a nursery. The work of this pest was graphically shown in the photographs on the cover of the California Cultivator of October 7. The leaf used to make that illustration was given to me by Mr. Shaw, in charge of quarantine work in New York harbor.

The greatest danger comes from the lack of understanding of the real menace by the mass of the people and the pressure brought by the importing interests. These importers secure a measure of support from large manufacturing interests and others because of "reciprocity" in foreign trade relations. It is of vital interest to the American exporter that the European trade balance be maintained and that this be done through large receipts of foreign fruits is as agreeable to him as any other method. Take, for instance, the Mediterranean orange and lemon directly from the home of the Mediterranean fruit fly. The fruit comes to the ports of the frozen northland where it is supposed the fruit fly will not exist. The steamer in port, taking on cargo for California points, necessarily takes on ship's supplies, a large portion of which consist of fruit. These fruits come through the canal and all the way under conditions which make for preservation of the life of any pests infesting that fruit. The steamer comes into San Francisco and Los Angeles harbors and conditions are ripe for establishment of these pests in California orchards.

What is to be done about it? Educate! Agitate!

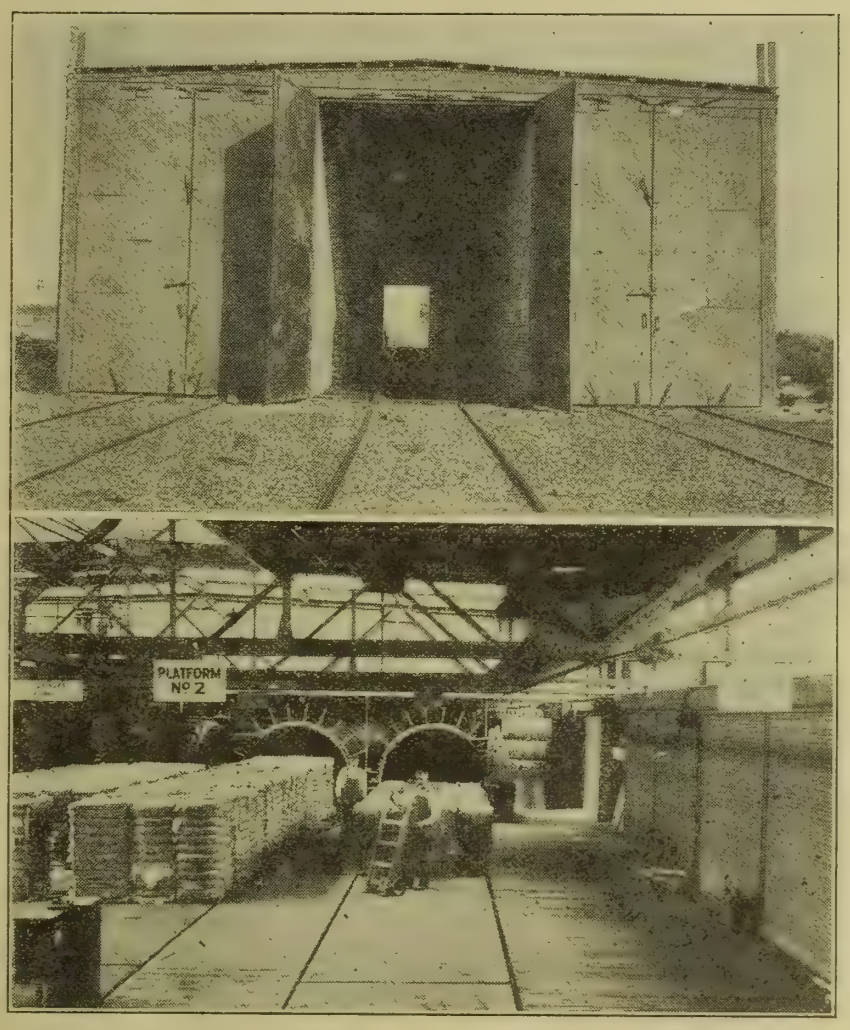
It is probable that even Californians are slow to appreciate the magnitude of the loss from these pests which should have been kept from our shores. Take, for instance, the San Jose scale which has infested orchards of this state for the past 40 or more years. It is estimated that the total loss from this pest, and largely in California, has aggregated between 200 and 300 million dollars. Citrus canker in its 13 years infestation of Florida's orchards has caused in cash appropriated by federal department of agriculture and the state of Florida and in cash value of trees burned nearly 20 millions of dollars loss. This does not take into account the loss of annual income because of orchards burned nor the disheartening effect on the industry. Then there is the Hessian fly, Argentine ant, corn borer, pine blister, chestnut bark disease, and pests almost innumerable which have cost other millions or even billions of loss. The department of agriculture at Washington has made a list of some of these and this list has already passed the total number in excess of 3,000.

So far as known none of these major pests have been introduced since the federal horticultural board has been functioning, but the efficiency of the past is not sufficient for the future for increasing commerce means increasing menace, and a greater control force, and more efficient must be employed.

It has been my privilege to observe methods of inspection and quarantine enforcement at both San Francisco and Los Angeles harbors. With an average of 10 to 20 ships a day in each of these harbors it seems to me that excellent work is being done. Greater safety, however, would be secured by the increase in number of men employed.

Knowing methods of work on this

(Continued on Page 631)



**Each the Largest in the World: The Upper at El Paso; the Lower at Boston**

Watch is kept on the boundary between the United States and Mexico at Calexico, Del Rio, Nogales, El Paso, Dorado, Eagle Pass and Brownsville. This is to prevent crossing the line by any pests which may affect American agriculture, but principally those of the cotton plant. Any car which has been used in transporting cotton or cottonseed which crosses the Rio Grande must be thoroughly fumigated before it is used for transportation in the United States. The disinfection is accomplished through the use of monster fumigation houses as shown above. There are three tracks running through the house in the upper photo, each of which are capable of carrying five cars. When the cars are set the doors at both ends are closed and clamped, as may be seen, by use of the levers at bottom and top and up and down the center. The center chamber and the one at the right may be used for five cars each while the one at the left has two movable gas tight doors so arranged that one, two, three, four or five cars may be set and fumigated in that compartment. When the doors are closed and clamped the great generators are started and the chambers are charged at the rate of two ounces to every hundred cubic feet. The cost of the fumigation is $4 per car and is paid by the shipper. This fumigator is built and kept by the F. H. B. The gentleman standing at the far end of the "tunnel" is H. H. Willis, in charge of the El Paso installation.

The lower picture gives a view showing the open end of two of the great vacuum tubes at Boston. The swung back doors, also the clamps upstanding around the circumference of the opening are plainly shown. As the big steel doors are closed after a load of cotton has been moved in on the cars on a movable platform which as may be seen is on a level with the remainder of the floor of the warehouse, the clamps are set, the big pumps started and in 15 minutes a 26-inch vacuum is obtained. Then the hydrocyanic acid gas generators are started. Six ounces of cyanide are used for each 100 cubic feet of space. The controller which operates the electric motor for the "train" is shown at the lower left corner of the photograph.

Both these photos were taken by the Cultivator camera, the lower one being especially gratifying because in order to take it it was necessary to climb up amongst the roof girders where dust and cobwebs prevailed.

# Agricultural News Notes of the Pacific Coast

## Northern California

Farmers of Lassen County are discussing formation of a milk testing association.

The Latona farm center of Shasta County will hold a dairy cow contest for three months.

The Chico board of education has decided to add a course in agriculture to the local schools.

California Certified Seed Potato Growers holds next annual meeting in Sacramento, December 13.

The olive crop in Shasta County is very light this year. Picking has been going on for a couple of weeks.

An irrigation system has been installed at Tudor, Sutter County. It will supply water to several hundred acres.

Shasta County proposes to have a land colony, or two of them, in spite of the failure of the state aid bond proposition.

Two poultry club contests will be held in Napa County the coming year. One will be an egg laying contest, the other pullet raising.

Fourteen carloads of cattle were shipped from Lincoln, Placer County, last week to Dos Palos, Merced County, for winter feeding.

Grizzly Flat, El Dorado County, reports the heaviest crop of acorns and other mountain nuts in many years, good fattening ration for sheep, hogs and goats.

F. W. Read, for three years chief of the bureau of standardization, California department of agriculture, has tendered his resignation to take effect January 15.

Schedule of Pacific Mail liners from San Francisco to the Orient has been shortened one day Necessity of quick delivery of costly silk shipments is credited with the speeding up.

[illegible]rmers of the Coloma district of El [illegible]do County shipped almost their entire crop of Lady apples to Honolulu for the Thanksgiving trade. Growers received four dollars a pear box.

Orange growers of the Fairoaks section of Sacramento County began picking Navels the middle of November, many growers planning to get their entire crop in the first pool closing the end of November.

It is announced that 5,000 standard refrigerator cars have been ordered. The total cost will be about $15,000,000. It is hoped that these cars will be in commission before the beginning of the 1923 shipping season.

There were more than a thousand forest fires in the state of California during the last summer. The total acreage burned over was 290,800, nearly all of which was government land. The damage to timber was estimated at $134,000.

Fertilizer dealers met in Sacramento recently and discussed with Chief Gray of the division of chemistry, state department of agriculture, the matter of lime, marl, gypsum and sulphur. Many dealers in these materials have hoped Chief Gray would consent to classify them with fertilizers. For the present, however, the dealers have endorsed Mr. Gray's attitude and the term fertilizer applies only to materials containing nitrogen, phosphorus or potassium.

## Central California

Effort is being made to reopen sorghum factory at Modesto.

The Tulare board of trade is backing campaign to organize a cow testing association.

Installation of equipment in the Don Pedro power plant has been recorded in picture films.

Watsonville is planning a community Christmas tree on Christmas night at the Auditorium.

The annual grape institute to be held at Fresno early in the year will last two or three days.

An organized band of chicken and turkey thieves was reported to be operating in the Turlock section.

It is expected that the Don Pedro dam on the Tuolumne River will be completed about the middle of December.

The poultry department of the Stanislaus County farm bureau plans to put on a culling and egg laying contest.

The annual grape institute held by the Sun-Maid Raisin Growers at Fresno will be announced soon after the new year.

The ninth annual poultry show of the Stanislaus County Poultry Association was held at Modesto Winter Garden, December 5-8.

The Tulare County branch of the California Cattlemen's Association will hold annual meeting and election at Porterville on January 14.

The cockerel sale at Tulare under auspices of the county farm bureau auctioned off 65 purebreds from Oregon, Washington and California.

County Horticultural Commissioner Hickman says that production of gladiolus bulbs in Monterey County the past season brought in over $7,000,000.

Manager Young of the Terra Bella-Richgrove and Grand View packing houses says this promises to be one of the most successful orange seasons.

The California Canning Peach Growers held its first annual meeting at San Francisco, December 5. Directors were elected for the ensuing year.

An expert gang of cattle rustlers at Salinas has been jailed. They have been operating for months, selling cattle to the Union Sugar Company at Betteravia.

The two units of the cow testing association in the Merced County farm bureau have under test 2475 cows. It is probable that a third unit will be formed in the spring.

A committee has been named by the Tulare County branch of the California Cattlemen's Association to work out cooperative arrangements with the Tulare farm bureau.

The Keyes farm bureau reports almost universal demand for electric power from the Turlock irrigation district. The power is generated at Don Pedro dam and will be distributed by the district.

The annual meeting of the California Raisin Festival Association will be held at Fresno, January 18. Representatives of civic organizations and chambers of commerce throughout the valley have been invited to attend.

## Southern California

The cement plant at Victorville is to be enlarged to capacity of 5000 barrels per day.

The Escondido grape board reports all bills paid and $200 on hand for next year's celebration.

San Bernardino County has plant quarantine inspector at Barstow to check up on incoming automobiles.

Seven carloads of winter produce were shipped from San Diego into the Imperial Valley for Thanksgiving trade.

Six additional plant quarantine inspectors will be stationed in Riverside County through cooperation of state and county.

The San Juan Capistrano Walnut Growers Association was burglarized, over $1000 worth of No. 1 softshells being stolen.

A sow and litter contest was started in the Ventura County Pig Club on December 2. Scoring will be made on April 15.

Manager Fatjo of the California Cattlemen's Association, zone five, announces that the office at Los Angeles was discontinued on December 1.

Water users in the Imperial irrigation district are notified that water will be cut off during repairs at Hanlon's heading from December 11-16.

A quarantine inspection station has been located at Daggett to inspect baggage of auto tourists coming in over the National Old Trails and Arrowhead highways.

Chairman Hoover and Reclamation Chief Arthur P. Davis were in Imperial Valley last week to meet irrigation district directors and go over plans for flood protection.

Negotiations are now under way between San Bernardino County officials and the Santa Fe railway company for the construction of walls for storm protection in Cajon Pass.

The Associated Chambers of Commerce of the Imperial Valley are asking the state highway commission to complete the paved road through Westmoreland to El Centro.

Vista, San Marcos, Carlsbad and other communities in that section of San Diego County are forming committees to discuss plans for securing water from the Hénshaw dam.

Randall T. Chew has been named manager of the Duarte-Monrovia Fruit Exchange. He has been superintendent of the field department of the Charter Oak Citrus Association.

Farm center meetings in Imperial County at Seeley, December 11; Westmoreland, 13; Jasper, 15; McCabe, 20; Imperial, 21; Acacia, 22; Eastside-Sunset, 26; Alamo-Verde, 27; Niland, 28; Directors, 29.

The annual duck dinner of the National Orange show management at San Bernardino last week was attended by 160. The toast of the evening was "To the Success of the Thirteenth National Orange Show."

The home department of the Imperial County farm bureau will hold meetings at Jasper, December 12; Magnolia-Mulberry, 13; Alamitos, 14; Calipatria, 15; Westmoreland, 19; Seeley-Lantana, 29; Meloland, 21; Spruce-Trifolium, 22.

## The Coast and General

Oregon potato growers are considering necessity of grading their stock before sending to market.

A new national bird reservation has been established on a 40 acre tract adjoining the elk refuge near Jackson, Wyoming.

The annual meeting of the National Association of State Marketing Officials will be held in Chicago the early part of December.

Squash raising has been unusually successful in Skagit County and squash canning is a feature of the packing industry there.

Bids for construction of highway between Morgan and Peterson in Morgan County, Nevada, will be received by the state road commission.

The world's production of all kinds of commercial cotton this year will be about 16,750,000 bales. America's production is figured at 10,135,000.

A farm bureau publicity conference will be held in Chicago, December 8 and 9 in conjunction with the fourth annual meeting of the American Farm Bureau Federation.

The second pig survey of the United States was begun by the department of agriculture on November 1. It will gather information on swine raising in all states in the Union.

An organization of purebred livestock breeders is being pushed by interested stockmen in Arizona. The first get together meeting was held at Phoenix during state fair week.

The apple crop of the state of Washington is estimated at 25,678,000 bushels. 1921 crop was over 29,000,000 bushels. The quality is estimated at 85 per cent this year against 91 last year.

Shippers at Salen, Oregon, announce that 75 per cent of the prune crop has been sold and about 50 per cent of it shipped. A larger percentage would have been shipped had it not been for car shortage.

The Coconino Sun is calling for a road connecting southern and northern Arizona before appropriating millions for a paved road from Phoenix into California which it calls "a down hill shoot out of Arizona."

The Minnesota farm bureau is pooling orders for fuel wood. Farm bureau township units in the southern prairie counties are grouping orders so that farmers in the northern wooded sections can ship carloads direct.

At a recent meeting at Flagstaff, called by the Coconino Cattle Growers Association it was decided to ask a larger appropriation for the state livestock sanitary board in order to maintain an inspector on the range a greater part of the time.

In New York City unloads of Texas onions during April and May amounted to 832 cars, and in the same period the following equivalent carloads arrived from foreign countries: Egypt 300, Bermuda 72, Chile 56, Australia 20, Argentina 16, and Mexico 8.

It is estimated that the sugar beet crop of the Yakima Valley grown on 3200 acres this year will yield as large a tonnage as was harvested from 6000 acres last year. One farmer on the reservation, A. B. Bartlett, reports harvesting 294 tons from 15 acres, an average of 19½ tons to an acre.

# New Varieties of Avocado

HE September issue of "Plant Immigrants" gives notice of the release for dissemination and propagation of a number of Pope- . Guatemalan introductions.

ny of these have been tested out in California but the United s department of agriculture states these tests have not been suffi- to prove their real worth and they planters against planting them ommercial quantities until they been more thoroughly tried out. also ask that these varieties be agated and disseminated under names given them by the depart-

ose interested may get further in- ation regarding these varieties by ng United States Department of culture, Bulletin No. 743, "The ado in Guatemala."

e attached list gives the names numbers of those varieties re- d:

ny of the avocados introduced Guatemala in 1916-17 have come bearing in California and Florida. ral of the varieties are already in rade and are being planted com- ially.

e office of foreign seed and plant duction has received numerous ries concerning the meaning of names given to these varieties. In ed States Department of Agricul- Bulletin No. 743, "The Avocado Guatemala," the statement was "In order to distinguish these ados from varieties originated in United States, names taken from of the Maya dialects have been them. Inasmuch as they come the Maya territory, this may not appropriate."

e Maya race occupied Guatemala Yucatan in prehistoric times, and developed the most remarkable enous civilization of the western sphere.

e Mayas particularly excelled in tecture and art, and they were the only race in the new world to develop a written language. Of their numerous deities, Itzamna, the creator of mankind, was held to be the chief, and Yum Kaaz, the Maize god, who is portrayed as having for his headdress a sprouting ear of corn surrounded by leaves, symbolic of growth, may well be called the god of agriculture.

From the ancient Maya stock have sprung the twenty or more tribes which today occupy Guatemala. They are agricultural peoples, intelligent and industrious. The avocado is one of their favorite foods, and is called, in various dialects, oh, okh, un, on, and so forth.

In selecting the names for the varieties introduced into the United States from Guatemala, an effort was made to choose words which would not be unreasonably difficult of pronunciation, and which would, in as many cases as possible, have appropriate meanings. Several were named for Maya deities; one for an Indian who assisted in the work of introducing them; and in half a dozen instances, appropriate names were chosen from the Kekchi dialect of the Alta Vera Paz, an important avocado growing region of northern Guatemala. Below is the list, with a word of explanation concerning the derivation of each name:

Itzamna (No. 2), S. P. I. No. 55736. Named for the chief diety of the Maya Pantheon. Itzamna was considered the father of all other gods, and the creator of mankind. He was the founder of the Maya civilization, the inventor of writing and books, and the great healer.

Lamat (No. 3), S. P. I. No. 43476. This name is that of one of the twenty days of the Maya calendar. The hieroglyph which represents it shows, presumably, the setting sun. It is also connected with the planet Venus in some way.

Kanola (No. 6), S. P. I. No. 43560. This word is used in the Kekchi language of northern Guatemala to mean "sweetheart." It may not be of Maya origin.

Ishkal (No. 7), S. P. I. No. 43602. Kekchi word, meaning "little girl." The avocado was so named because it was obtained through the aid of an Indian girl; it might be termed "the little girl's avocado."

Coban (No. 8), S. P. I. No. 43932. Named for the town of Coban, capital of the department of Alta Vera Paz in northern Guatemala, where the parent tree is growing. Coban is one of the most important Indian towns of Guatemala.

Kashlan (No. 10), S. P. I. No. 43934. A Kekchi word meaning "foreign." The parent tree stood in the yard of one Diego Muus, an Indian of San Cristobal Verapaz. It was selected for propagation, and several visits were made to secure budwood. Because of this fact, the Muus family termed the tree the kashlan oh or "foreigner's avocado," and the name was adopted for the variety when it was introduced into the United States.

Chisoy (No. 11), S. P. I. No. 43935. The river Chisoy, an affluent of the great Usumacinta, flows close by the town of San Cristobal Verapaz, where this variety was secured.

Pankay (No. 12), S. P. I. No. 44785. A coined word, from the locative prefix pan and the Kekchi word keh or kay, meaning "cold"—literally "place where it is cold." The name was applied to this variety because it came from an extremely cold region, that of Totonicapan, elevation 8,500 feet.

Nabal (No. 15), S. P. I. No. 44439. A Kekchi word (the dialect spoken in the Alta Vera Paz region), meaning "plenty, abundance." The variety was so named because the parent tree produced unusually large crops.

Nimlioh (No. 17), S. P. I. No. 44440. A Kekchi phrase, meaning "large avocado." This variety is one of the largest secured in Guatemala.

Panchoy (No. 18), S. P. I. No. 44625. A phrase from the Cakchikel dialect (spoken in the vicinity of Antigua), meaning "place where there is a lake." It is the name of the valley in which Antigua lies, and where the parent tree of the variety was found.

Hunapuh (No. 19), S. P. I. No. 44628. One of the twenty Maya day names. In the Kiche dialect it means "the one Lord of Power."

Tumin (No. 20), S. P. I. No. 44627. A Kekchi word, meaning "money." The variety was so named because it appeared to be a particularly valuable one.

Benik (No. 21), S. P. I. No. 44626. One of the glyph signs from the Maya inscription. It is taken by Brinton, the well known archaeologist, to mean "strength and deific power."

Kekchi (No. 22), S. P. I. No. 44679. Name of one of the principal Maya tribes of the highlands of Guatemala. The variety was obtained in the territory occupied by this tribe.

Mayapan (No. 23), S. P. I. No. 44680. This was the name of an important Maya city. It means "place where there are Mayas."

Kayab (No. 25), S. P. I. No. 44681. A Maya word, meaning "tortoise." It was the name given to one of the 19 months in the Maya calendar.

Manik (No. 26), S. P. I. No. 45560. One of the twenty Maya day names. The hieroglyph which represents it shows a hand in the act of grasping.

Cabnal (No. 27), S. P. I. No. 447 2. Named for Jose Cabnal, a Kekchi Indian of Coban, who assisted in the work of securing these varieties in Guatemala.

Cantel (No. 28), S. P. I. No. 44783.

# Does Environment Lessen Pear Blight?

## By George C. Roeding, President California Nursery Co.

HERE is possibly no single disease of fruit trees that has of late years caused wider disaster to the coun try than pear blight; nor is one which has been more diffi- o control. For fully two decades s commanded the attention of in- gators and research workers ever pear growing has attained nercial rank. In some of the s east of the Rocky Mountains its ges have been so pronounced as to out the pear orchards over wide ; in others the cost of combating ctically rendered pear culture un- table; in still others it is only ble to keep it below the danger with heavy expense. Owing to its nce pear culture, according to the federal census, shows an appreci- decline east of the Mississippi y, while in the Rocky Mountain n and in the Pacific Coast states not without menace to the in- y. There is no state in the Union is immune; often it is more viru- in one section than another, but ere has a specific remedy been , though measures that afford relief in checking its spread more or less in evidence and if fully observed do much to main- pear culture on a profitable basis. view of these facts it is not at all surprising that pear blight was a subject of intense interest at the late State Fruit Growers' Conference held at Berkeley under the auspices of the University of California. Interesting as the discussions were, there was one important point that many failed to grasp, and that is the influence of en vironment and climate. For over 20 years it has been my observation that pear blight is almost entirely absent in the coastal regions of California, Oregon and Washington, that is, directly along the coast and inland, say, for a score of miles. The region immediately surrounding San Francisco Bay is practically free. I know of orchards in that region 40 years old that never have been affected. At Niles, in my test orchard, where I have growing and in full bearing 120 varieties of pears, including a number of trees nearly half a century old, pear blight is unknown. Similar testimony comes from other orchard owners in the same region. Prof. F. C. Reimer, in answer to my question why the disease never found lodgment along the Coast, replied he did not know, but it was a fact known to research workers that the disease was practically unknown along the Coast from Washington to California, that the area exempt to its attacks extended inland for some miles, that in this area, under certain climatic conditions, it might appear in a modified form one season, only to disappear in the next, and that the salt air seemed inimical to the disease.

### Conditions and Environments

Professor Reimer's observations coincide with my own. Pear orchards of large production are no uncommon feature in the central coastal regions of this state, and, what is of vastly more importance, they are invariably free from blight. While fruit growers' conventions are full of talks on dis eases and insect pests, one hears little of conditions and environment for the production of commercial fruits. It is a demonstrated fact that more highly colored pears are grown along the Coast than farther inland. The best colored fruit at the University Fruit Exhibit came from Monterey and Santa Cruz Counties. The Buerre Clairgeau, Buerre Bosc, Buerre d' Anjou, Doyenne du Comice, Bartlett and Forelle (Trout) were indeed beautiful to behold by reason of their high color, rendering them especially desirable for eastern shipment. In my visits to the leading pear orchards in Santa Clara, San Benito, Alameda, Sonoma, Contra Costa, Santa Cruz, San Mateo, Mendocino and Humboldt Counties, I found much the same conditions prevailing, with little or no blight in evidence. In some respects this is quite remarkable and merits consideration in relation to pear culture.

### Climate a Factor in Pear Culture

In California the four points of the compass have but little significance in defining climatic conditions. To say "northern" or "southern" California does not mean that the former is "cold" nor that the latter is "warm." Citrus fruits flourish in both regions, likewise do apples and pears. If we will consult a climatic map of the state we soon learn that there is a belt or region with an average temperature of about 52 to 56 degrees where there are few very hot or very cold days. This belt traverses the length of the coast line of the state. If Professor Reimers, after ten years of research work in trying to combat the disease, is correct in his statement as to the absence of pear blight along the Pacific Coast, our pear blight problem is at least in a measure solved.

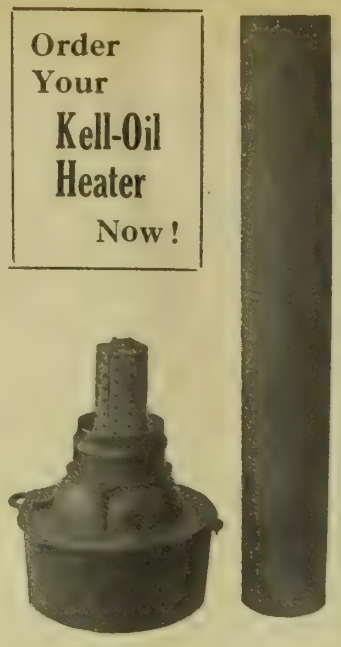
## *Severe Frosts Are Predicted for Southland*

Heavy to killing frosts were forecast for Southern California early today in a telegram from the district United States weather observer at San Francisco received yesterday at the local weather office. The weather for today will be fair, according to the Weather Bureau data.

It is considered likely that the frosts will be confined to the valleys of the Southland. Precautionary measures by fruit and vegetable growers are suggested by the Weather Bureau, especially if the weather in the particular locality is clear. If the skies are clouded a frost is considered unlikely.

The above appeared in a Los Angeles paper December 1st.

**Order Your Kell-Oil Heater Now!**



# The Kell-Oil Heater
## Will Protect Your Crop

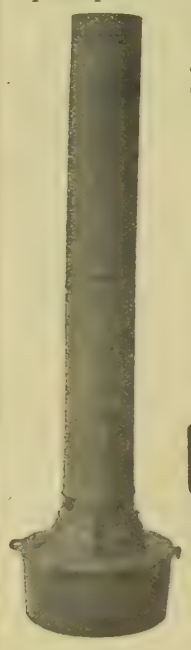
The California Fruit Growers Exchange on November 1st estimates the citrus crop for 1922-23 at 54,686 car loads—this is about 5,461 car loads less than the actual shipments of 1920-21—the loss being attributed to the frost damage of last January.

What are you going to do about it? Can you afford to be without Kell-Oil Heaters and take chances on further reduction in shipments and loss of profit on your crop?

By special arrangement with the factory we will be able to take a limited number of additional orders for Kell-Oil Heaters for delivery this season.

We are ready to demonstrate to your entire satisfaction the superior qualities of construction, operation and performance of the Kell-Oil Heater, both for citrus and deciduous fruits.

Study the illustration—note the burner construction—consider the advantages of the larger stack which gives 40% more radiation than that of other makes. Think of the long life and durability of the "Strokel" cast iron bowl. Let us show you these and other scientific principles of the Kell-Oil Heater. Let us demonstrate the heater and prove its efficiency and economy to you—DO IT NOW!



*Just fill out the coupon below and mail it in. We will arrange a demonstration for you at an early date in your own grove.*

**Mail This Coupon To-Day**

L. M. Railsback Company,
115 South Los Angeles Street,
Los Angeles, California.

I am interested in the Kell-Oil Heater and would appreciate a demonstration in my grove at an early date. Also circulars and information about the Kell-Oil Heater.

### NEW VARIETIES OF AVOCADO

(Continued from Page 605)

Named for the Finca Candelaria, a coffee plantation in Antigua where the parent tree was growing. "Cantel" is a corruption of this Spanish name, used by the Kekchi Indians of the Alta Vera Paz.

Tertoh (No. 30), S. P. I. No. 44856. A Kekchi word, meaning "expensive" or "costly." The variety was so named because its fruit sold in the market at a much higher price than that of any other grown in the same region. It is one of the largest fruited of the Guatemalan avocados.

Nimah (No. 31), S. P. I. No. 45078. A somewhat corrupted form of the Kekchi phrase nim-li-ha, meaning "large stream." The variety was so named because the parent tree stood close to the edge of a stream at Mazatenango.

Akbal (No. 32), S. P. I. No. 45505. One of the twenty Maya day signs, meaning "night" or "darkness."

Kaguah (No. 33), S. P. I. No. 45561. A word used by the Kekchi Indians, meaning "chief" or "master."

Ishim (No. 34), S. P. I. No. 45562. This word means "corn" (Zea mays) in most of the Maya dialects. We have thought it appropriate to use it as a varietal name for one of the Guatemalan avocados, because the Guatemalan Indians consider this fruit as useful and valuable as corn, their great staple food crop.

Kanan (No. 35), S. P. I. No. 45563. A Maya word, meaning "yellow when ripe." The flesh of this variety is of a rich yellow color.

Chabil (No. 36), S. P. I. No. 45564. A Kekchi word, meaning "pretty" or "beautiful." The fruit, though small, is unusually attractive in appearance.

### AVOCADO ABUSES

**By Ernest Braunton**

Every fruit industry has had its enemies, within and without. Even the citrus, greatest of all, has been at times sorely beset, and not always by natural enemies alone, such as insect pests and plant diseases. Man, supposedly a natural friend, has often proven an unnatural enemy, and to such an extent that he has had to be restrained by law from attempts to seriously injure the industry and therefore the interests of himself and fellow growers. One of the most drastic yet most necessary of these laws is the one that says he shall not sell or ship his oranges until they have attained a certain degree of ripeness as attested by their color and per cent of sugar.

At several conventions of the California Avocado Association various members have sought to have adopted resolutions recommending a somewhat similar law to be applied to marketing avocados. At the 1922 spring convention the present president, F. O. Popenoe, for the third time introduced such a resolution, which passed for the first time the approval of the delegates but was so amended as to render it impotent for certain benefit. Yet it was urged from necessity. For several years at varying times of the year half-grown and entirely unripe avocados have appeared on the local markets. This year has been no exception. About the first of November the writer received a letter asking him to visit a public market and inspect a lot of 60 lug boxes of "windfalls" of many varieties, some of which were stated to be but one-fourth grown, others half-grown and all in varying stages of unripeness. The visit was made, some of the fruit secured, and it still lies on the writer's desk, awaiting the day of ripening, which, alas, will never come, for the wait has now been a month. In the writer's estimation the 60 boxes of avocados were not worth 60 cents.

This is a matter that should be taken up by the directors of the avocado association as early as possible, and such action taken as lies in their power to combat and remedy this evil. If if can be ascertained who marketed these valueless fruits, he or they should be called upon for an explanation, for even a child of 15 years who knows avocados could not market such fruit with a clear conscience. If the seller or sellers hold membership in the association a promise should be exacted that such offence would not be repeated or the offender or offenders should be expelled from membership. If the directors have no such powers the matter should be acted upon, as herein outlined, at the next convention. The association cannot afford to have its members pursue such evil practices and should do all in its power to restrain outsiders from striking what are certainly deadly blows at their cherished infant industry. The injurious effects of unprincipled marketing, as evidenced by the fruits seen by the writer, call for no discussion; they are known to all growers and consumers of avocados. If such practices continue some legal restraint must be had or the rapid extension of the number of avocado consumers will receive a severe and lasting check. All interested are aware that the greatest, and nearly the only deterrent to the widespread popularity of the avocado is the sale of unripe fruit.

### ARIZONA COTTON NOTES

A meeting of the cotton growers was held in Phoenix, Saturday, November 25, to discuss the various phases of cotton culture. Director J. J. Thornber from the university of Tucson read a very interesting report on the recent cotton survey mad this section. Dr. O. F. Cook, c expert from Washington, D. C., r an interesting talk on the cotto periments being carried on at th S. experiment farm at Sacaton. C. Mote stated at the meeting tha ton seed could be imported from fornia under proper inspectio planting purposes here in the va Being able to secure this good will be a great aid to the cotton g ers. It developed in the meeting the leading varieties for planting season will be, Pima, Acala, Me Durango and Hartsville. All thes rieties have been tried out this se and farmers stated that yields ing from one-half to one bale per are being secured this year. Clo $5,000,000 worth of cotton will be duced in the Salt River Valley season.

An eminent authority on c growing in southern Arizona rec made the statement that he beli it would be but a few years unti southern part of Arizona and Ca nia would be producing 1,000,000 of cotton annually. This produ will be made possible by the ope up of the vast acreage that will e ually be put under irrigation by development of the storage pro on the Colorado River. Owi climatic conditions and the assu of production each season a fine staple is produced in the sectio the Southwest. Planting the rig riety and the best seed obtainab sures not only a greater yield bu ter profits per acre.

Hartsville, one of the long s upland varieties of cotton, so Phoenix, Saturday for 31¾ cent pound. The staple of this variety full 1¼ inches. The price of short staple varieties sold the date was 26 to 28 cents, while tions for Pima were 33 to 35 cen No. 2. More than one-half of the ton crop has been harvested an doubt with the continuance o present good weather for 30 days bulk of the cotton will be picked.

# Persimmon Growers Gather

By Ernest Braunton

SIXTEEN named varieties of persimmons in considerable numbers and as many plates of unnamed or unknown varieties would of themselves of sufficient attraction to permon growers. Such an exhibit staged at Fullerton, Orange nty, November 24, at the first itute of persimmon growers ever in California. The 16 names the exhibits were: Dai Dai u, Fuyu (Fuyugaki), Godby's lless, Hachiya, Hyakume, Miyotan, mi, Saburosa, Shakumi, Tamopan, anashi, Tsuru, Tsurunoko, Yeddo , Yemon, Yotsuwari.

ut the attendance of 200 was much e than anticipated, as first meet- of this character are usually at- ed by a faithful dozen or so. Both ors and fruit exhibits came from ts as far away as San Diego and amento, also from Chico, Butte nty. From the latter point came . Thomas, the United States plant au's persimmon specialist, with s of all the varieties grown at the ral government's plant introduc- garden located near that city. ng these were some new seedlings romise not yet given names.

### Program

. J. R. Schofield, president of the ge County farm bureau, presided, Knowles A. Ryerson of Los An- was the first speaker. His sub- was "Commercial Experience with mmon Varieties in California." He that as yet we have no recognized ority on Japanese persimmons in country. In order to learn we have lternative but to visit bearing ards, observe closely and discuss ubject with the grower. The first ed trees to reach California came the department of agriculture at hington in 1870. There are sev hundred varieties in Japan, and confusion exists as to names, of course the names we have may ll be right. The three most com- here, in the order of their desir- y, are the Hachiya, Tananashi, Hyakume. In Placer County the is meeting with some favor. county in 1921 shipped 137 tons this year may exceed that quan- All of Southern California will roduce more than 125 tons but it all be consumed at home. Fruits in cold storage at Berkeley re- ed in good condition for periods ing from 140 to 250 days. In r County, when grafted on Amer- wild stock, the fruit sets 30 days than that on Chinese or Japanese , thus avoiding injury in case y late frosts prevail.

C. Thomas of Chico next spoke on avior of Persimmons at the Gov- ent Gardens." The first Japanese mmons to come to the United s were brought here by Commo Perry in 1856. There is a wide e in color of flesh and degree of ngency, also in number of seeds. toughest skin is that of the Tamo- and this quality makes it ideal ip. Its shape is also ideal for shipping and eating. As it is flat ed it may be turned upside down plate, a disk cut out and it is to eat with a spoon. The Fuyu yellow fleshed non astringent va- of ideal form that may be eaten, an apple, at any degree of hard- or ripeness. When hard it is of flavor but becomes sweeter as it s. In the opinion of Mr. Thomas Fuyu is the best of all for com- ial planting. The general public at eating hard persimmons, for have been used only to those that ot be eaten except when soft. But them one that may be eaten at degree of ripeness and it will ly become a favorite.

me Pertinent Persimmon Prob- was to have been treated by R. odgson, detained at home by ill- so a talk on the subject was by Mr. Ryerson. There are three tocks used for grafting upon: ese, American, Chinese. The lat- most commonly used, is also n as Manchurian, or Lotus. The Japanese is hard to grow and handle, but with a long tap root and general root system, it will grow a good tree but is the poorest of the three. There are orchards in China more than a century old budded on Lotus stock, that still are in good condition. The seeds of Lotus will keep much better if allowed to remain in the pulp until needed for planting. It is the best stock we have. In Florida it has been found to be very poor on low wet lands. But even there it is better than Japanese, and the native American is best for such soils. The latter is fairly good general stock and is not believed to be as short lived as has been reported. It is, however, slower in growth than Lotus. While root stocks are supposed to have an influence on scions nothing of the kind has been noticed in persimmons. Tamopan is always tall and slender and Hachiya always well balanced, as broad as high, no matter on what stock they are grafted. The eastern or American stock will sucker at every break of the roots. In some common varieties Hume of Florida has found trees that never bear pollen, but this is not believed to occur in California. We are not much troubled by lack of pollination, but as we have "off" years in bearing it is a matter that should be studied. The Gayley, so much used as a pollenizer, does not cover the full blooming season in California.

### Business

There was considerable discussion regarding organization, and Farm Adviser Wahlberg was made temporary chairman of a committee of five, and W. S. Rosecrans of Los Angeles, secretary. One member is to be appointed from each of the five most prominent persimmon districts: Santa Barbara, San Fernando, San Gabriel, Fullerton, Orange. This committee will meet in the near future and effect an organization of the persimmon growers in the south end of the state.

## STRAWBERRIES FOR IMPERIAL VALLEY

By J. C. Archias

The demand for early strawberries in the last few seasons has exceeded the supply and many a fortunate grower's returns from an acre of strawberries has been far more than the value of the land. Improved Klondikes are always in demand and as our season in the Imperial Valley is earlier than in practically any other part of the United States we have a very broad market with practically no competition.

Strawberries, as is commonly known, will stand many years in the original beds without replanting, and while there is some expense in thinning and cultivating it is not a crop commonly known as expensive to produce. It requires about 5000 plants to the acre.

Strawberries do well in medium to light soil and require but little fertilizing and a comparatively small expense for shook. One Japanese grower reported that he picked over 600 crates of Improved Klondike strawberries he grew the past spring, netting him an average price of $2.10 a crate, giving him $1,300 an acre returns.

A reasonable acreage up to five or ten acres should be a very safe investment for any grower. A conservative estimate would be about $75 an acre for preparing the soil, planting and the purchase price of the plants.

---

Latest estimates show that the numbers of horses, sheep and swine in England and Wales have declined slightly in the last year while cattle have increased in numbers.

---

# OilPulls Outwear several "cheap" tractors

YOU have seen farmers whose tractors always keep going. When favorable weather comes, they take full advantage of it. When plowing or belt work is difficult, their tractors "go through." Other farmers suffer endless loss because their tractors fail at critical times. The OilPull established itself as the leading high-grade tractor of the world because it is built, NOT just for "fair weather" going, but for *all* conditions. It has the stamina and reserve to do its work without strain. Therefore, it seldom requires mechanical attention and outlasts several "cheap" tractors.

## OILPULL

***"The Cheapest Farm Power"***

In speaking of their OilPulls, owners tell you of its heavy duty, valve-in-head motor and mighty power; of dual lubrication; of oil cooling and why radiator never overheats; and of Triple Heat Control, which permits burning kerosene, stove tops and distillate successfully, and saves 30% to 50% of the fuel bill. For *real* economy, no tractor can equal the OilPull. Write for Triple Heat Control Booklet, and full details.

## ADVANCE-RUMELY

**Thresher Co., Inc., 17-19 Main St., San Francisco**

The Advance-Rumely Line includes kerosene tractors, steam engines, grain and rice threshers, alfalfa and clover hullers, husker-shredders and farm trucks.

*Serviced from 33 Branches and Warehouses*

# Peach Prices for Twenty Years

A STRIKING example of the benefits conferred upon California growers through cooperative marketing organization is shown in a recent report of the California Peach and Fig Growers. The report concerns itself with prices paid for dried fruit over a period of 20 years and shows conclusively that dried peach growers were greatly benefited by a stabilized market during the period of readjustment after the war.

Going back over the past 20 years, which covers a period having direct bearing on a large percentage of peach orchards figuring in California production, 1919 is the year in which growers received the maximum price for dried peaches. The price paid averaged 14⅞ cents per pound. That was the year when the war closed, when stocks were depleted and readjustment had not started.

From the year 1902 until the year 1915, inclusive, the average price paid to dried peach growers in California was 4¾ cents per pound. In 1915 the California Peach Growers was organized and functioned in 1916, controlling over 75 per cent of the crop. From 1916 to 1922, with the cooperative organization in command, under the same management and personnel as now features the California Peach and Fig Growers, the average price to the members has been .1011, a fraction over ten cents per pound, or an increase in average price paid of over 100 per cent. This high percentage of increase includes 1920, 21, 22, these three years featuring the most violent economic readjustments in the history of the country.

The only years in the 14 tabulated preceding the launching of the organization, when prices paid exceeded any year of the organization period, were 1906, 1907, 1911, when the shortest crops of dried peaches were harvested in the history of the past 20 years, with one exception, that of 1904.

The accompanying table shows that in only two years, the first of the organization, and the year 1921, when the violent price readjustment took place, did the price fall below the highest price paid in the 14 years preceding the establishment of the California Peach Growers. The year 1916 brought the growers a price of 6 cents per pound, as contrasted with the wholesale price quoted the trade by independent packers of that year of 5¾ cents per pound.

The showing is more remarkable when it is taken into consideration that the 1921 crop was larger than that of the two years, bringing the highest prices in pre-association days by 100 and 33 1/3 per cent respectively. Yet the price paid was only lower by approximately 12 and 18 per cent.

In addition to the strength accorded cooperative marketing by these comparative figures, the fact that each year the entire crop was sold, and often sold at a time when many other crops were allowed to spoil or went unharvested, is a big factor to be considered in favor of the cooperative organization.

In analyzing the prices paid in past years it may be pointed out that certain comparisons on tonnage and price can be made that are illuminating.

The year the association returned to the growers the highest price in the past 20 years was 1919, although it had the third largest crop harvested in that period and amounted to 35,000 tons. The only other year closely comparable was 1914 when 35,100 tons were harvested and only 4 cents per pound paid the growers by independents.

In 1917, the second year of the association, 39,000 tons were harvested and the growers paid 8¼ cents per pound. This was the largest crop in the history of the state, and the nearest approach in pre-association days to this crop was in 1913, when 37,500 tons were harvested and the growers received but 4 cents per pound.

In 1921, when business in this country was at its lowest ebb, the association marketed 21,000 tons for its members and paid them 7½ cents per pound. The only 20,000 ton year in pre-association days was in 1909 w the average price paid was 4 cents

| | Tons | Price P |
|---|---|---|
| 1902 | 22,000 | .042 |
| 1903 | 18,000 | .047 |

## FLORIDA CITRUS FARMS SH GOOD PROFIT

A net return of 12 per cent on average capital of $25,000 is shown a preliminary report of a survey incomes and profits of 100 fruit fa in Polk County, Florida, made by United States department of agri ture. Of the five years, 1917-21, first year was the poorest, return 4 per cent, and 1919 was the best, turning 20 per cent on the capital vested.

The average capital per farm bled during the five year period, partly to the general increase in p levels and partly to the fact that groves are comparatively young. average value of bearing gro ranged from $1,000 to about $3,000 acre, depending on age, location condition.

The farms averaged 41 acres in with 18 acres of fruit of bearing and 6 acres of non-bearing age. Of bearing acreage 10 acres were oran 7 were grapefruit, and 1 was tangeri About three-fourths of the fruit a age on these farms has been set since 1902 and most trees have yet reached maximum yield. Gr fruit was not set out extensively u 1907 and its popularity continued about 10 years. During the last years new plantings on these fa have been largely oranges and tan ines.

The average receipts per farm the five years amounted to al $6,400, of which 95 per cent was f the sale of citrus fruits. Very other crops were raised on t farms. The average cash expe and depreciation of buildings equipment amounted to about $2. Fertilizer constituted nearly one- of the total operating expense. soil and climate of Polk Cunty are adapted to the growing of citrus fr leading all other counties of the s in citrus fruit production. Numer lakes afford protection from f The groves studied are typical of cared for groves, and in the opi of department specialists making studies the returns represent what sonably could be expected from managed groves under the condit prevailing during the years cove The five year average yield per acr boxes was 148 for oranges, 165 grapefruit, and 172 for tangeri The yield in 1917 was one-third than the five year average, owin the damage caused by a high wind companied by cold weather.

The average price received per during the period studied was $2.62 oranges, $1.67 for grapefruit, and $ for tangerines. The highest price received in 1919 and the lowest 1917. The higher prices received oranges over those received for gr fruit has been an important facto the orange being favored in re plantings of new groves.

### SCALE PEST GAINS HEADWAY

The most serious outbreak of cot-ıy cushion or fluted scale (Icerya rchasi) reported in many years has en found in the Highgrove district ar Riverside. Many trees were lo-ted in which the bark on the young ·es is already splitting and bad cases gumming have started. Immedi-ely upon receiving this report Hor-ultural Commissioner A. E. Bottel Riverside County took the matter with Professor H. J. Quayle of the rus experiment station, Harry S. nith, chief of the bureau of pest ntrol, state department of agricul-re, and H. M. Armitage of the state ectary at Whittier, and an investi-tion was immediately made and en sent into the field for the pur-se of gathering natural enemies.

It is the opinion of the investigators at this dangerous outbreak is direct-traceable to the use of arsenical d other internal poison sprays. hen interviewed at the citrus ex-riment station Professor Quayle ated that the only serious outbreaks cottony cushion scale during the st several years were undoubtedly used by poison sprays killing off the mmon vedalia (Novius cardinalis) d other natural enemies of the cot-ny cushion scale, leaving the scale to ltiply without check.

The fully matured females are eas-distinguished by the large, white, ted, cottony egg masses at the pos-rior end of the red, yellow or dark own bodies, which together are from to ½ an inch long and three-fourths wide. The eggs are deposited with-the cottony mass, are oblong and of rich cardinal red. From 400 to 1000 y be laid by a single female. The ung are bright red with dusky legs d antennae and several long tail-e hairs at the posterior end. The les are small two winged red died insects with long antennae d white anal appendages.

This scale reproduces so rapidly that less checked the branches and foli-e often become so thickly infested at the plant may be greatly weak-ed or killed.

In the case reported from High-ove the trees are already showing s effect. In many instances the rk on the small twigs is badly cked and gumming already shows. Artificial control is not usually prac-ed because of the efficiency of nat-al enemies. However, in this case ere the natural enemies have been royed by the use of poison sprays, l while the cottony cushion scale is the younger stages, a fair control y be obtained by fumigation, leav-the older scale to be controlled by tural enemies.

### HEAVY YIELD OF THOMPSONS

We are having many calls asking at kind of land produces the best apes or the heaviest yield, and the ter will give the yield of an eight e vineyard grown by Walter Hout-near Fowler.

His crop of Thompsons this year on ht acres was 11,465 trays, that is ittle over 1433 trays per acre, and vines are nine years old this ing. It yielded three tons of rais-per acre the third year.

The land is very sandy, and was alfalfa before planted to vines. ere are other vineyards near this that have been manured very avily but they do not yield like the alfa land.

The vines should be planted to the ting as early in the spring as pos-le after the danger of frost is over, ich is generally in the latter part of bruary or early in March. They uld be set six feet apart in the w, the rows 12 feet apart. Rows uld run east and west so the sun n shine on the trays all day in dry-time, which it will if trays are t nearer the grape row on the north. Fowler Nursery.

### CALIFORNIA CHERIMOYAS

From reports of travels in tropical nerica it seems that cherimoyas rive as well in the warmer parts of lifornia as they do in the tropics. ilson Popenoe writes: "I found the ld forms of the fruits similar to those in cultivation in California. * * * one which I saw weighed over a pound, and specimens between three and four pounds in weight are said to have been found, though I do not have this on very good authority." A most excellent fruit of 3½ pounds weight grew in Hollywood, in the western part of Los Angeles, in 1921, on a tree receiving no care except summer irrigation.

### INTERNAL BROWNING OF YELLOW NEWTOWN APPLES

Internal browning of Yellow Newtown apples is not caused by a parasite, but seems to result from conditions within the fruit itself, according to a new bulletin issued by the United States department of agriculture and which sums up the result of four years work. The trouble is particularly serious in the Yellow Newtown apples grown in the Pajaro Valley.

This variety and some others develop a brown discoloration in the flesh of the fruit when kept in cold storage for a long season. The trouble is more prevalent following seasons of light production, and fruit from trees that produce small crops is more subject to it than fruit from heavy yielding trees. Heavy fertiliza-

# Efficient Tractor Power Calls for Efficient Implements

*A new Oliver tillage implement supplies a need in the modern way of farming with tractor power.*

FARMERS and fruit growers have been eager to recognize the opportunity to speed up work and do it better by availing themselves of the efficiency of tractor power coupled with modern implements designed for tractor requirements.

Fordson farming is practical farming. Better tillage methods because more time is available insure larger yields.

Of no little importance in successful Fordson farming are the proper implements to permit the tractor to give greatest results.

A new Oliver implement in the line of standard equipment for the Fordson is the No. 31 cultivator for summer fallowing and for cultivating orchards.

Built to work in perfect harmony with the tractor and to meet in every way its requirements, the Oliver No. 31 cultivator is a most useful addition to the tractor equipment in the fields and orchards of California.

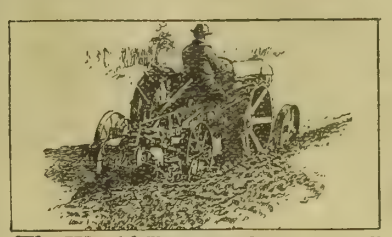
In orchards, the No. 31 is built low so that nothing will interfere with low hanging branches. It is possible to cultivate close up to the trees without damaging them.

For killing weeds and summer fallowing the additional work that can be accomplished with the five and six foot range of the No. 31 adds still further to the work that can be accomplished with the tractor.

The Oliver No.31 cultivator has a simple power lift. The power

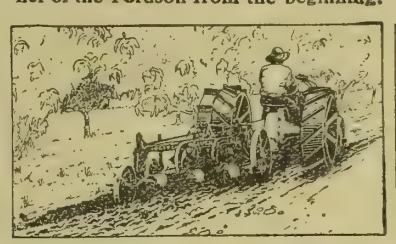
lift as well as the screw device by which depth changes are made, are controlled entirely from the seat of the tractor. The shovels are adjustable for different width cuts. They are so spaced as to give thorough pulverization. Special irrigation shovels can be supplied for irrigation fields.

The No. 31 cultivator is another link in the line of power farming tillage equipment made by Oliver for the greater service of agriculture. Greatest protection for your tractor investment lies in securing the proper Oliver power farming equipment for your particular needs.



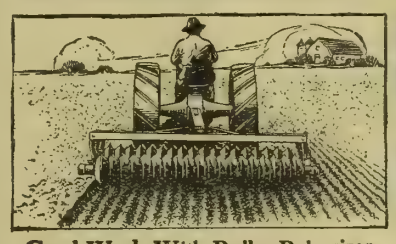
**The World Famous Oliver No. 7**
On thousands of farms, the world famous Oliver No. 7 has been the plowing partner of the Fordson from the beginning.

**Fordson Disc Plowing**
Oliver Fordson special disc plows have set a new standard. They penetrate the toughest soils, yet are light running.



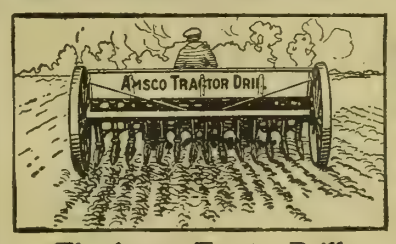
**Special Oliver Orchard Plow**
Fordson orchard plowing is done thoroughly with the Oliver special orchard gang. Branches and trunks are not injured.

**Roderick Lean Automatic Harrow**
Fitting the seed bed the Fordson way with the Roderick Lean Automatic Tractor Disc—a special Fordson Harrow.

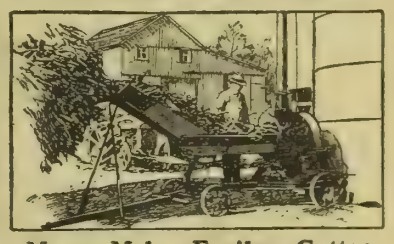


**Good Work With Roller Pulverizer**
Final Fitting of the seed bed with Fordson power and the roller pulverizer has meant more bushels for many farmers.

**Roderick Lean Orchard Harrow**
Orchard discing with Fordson speed with gangs set in or extended with the Roderick Lean Automatic Orchard Disc.



**The Amsco Tractor Drill**
Tractor speed and accuracy utilized by the Fordson owner with the Amsco special drill. Force feed makes positive planting



**Money-Maker Ensilage Cutter**
Fordson silo filling with the Money-Maker done quickly and cheaply. Strength and scientific design give perfect work.

**Wood Bros. Individual Thresher**
The Wood Individual Humming Bird Thresher and Fordson make short work of threshing. All grain is saved.

**The Money-Maker Hay Press**
Baling hay with the Fordson and Money Maker baler is an important operation to the farmer with large hay acreage.

## Ford Dealers Everywhere Sell Standard Fordson Equipment

## Farming—like other industries —requires dependable motors

*G-E 10-h.p. motor used by A. W. Haley, of Newark, Cal. to cut alfalfa for ensilage.*

THE value of the electric power now available to California farmers is largely determined by the type of equipment used. G-E electric drive is proving as successful in the agricultural field as in every other industry.

In addition to pumping water, G-E motors are cutting ensilage, grinding feed, fanning grain, running grindstones, mixing cement, and doing many other farm operations *economically* and *well*. In fact, there is a G-E Motor and control for every farm use.

Our specialists on the Pacific Coast will tell you of these many uses for electrical equipment in modern farming, and there is a G-E Motor dealer in every farming community.

**General Electric Company**

General Office Schenectady, N.Y. Sales Offices in all large cities 45-134

Pacific Coast Sales Offices: San Francisco, Los Angeles, Portland, Seattle, Spokane, Tacoma.
Rocky Mountain Sales Offices: Denver, Colorado; Salt Lake City, Utah

## *"If its a Hardie its right"*

### You Can Spray Faster With a HARDIE SPRAYER

The Hardie is built for it—a time saver and a fruit saver. Its big pump capacity provides a volume of spray liquid that enables you to quickly cover every leaf and limb. Its powerful engines gives the high pressure necessary for effective spraying.

**Simplicity of Construction is Always a Hardie Feature**

Our 1923 Catalogue gives a description of the complete line of Hardie Sprayers, including the Hardie Mogul Outfit. This Outfit is used for large orchards where the greatest capacity and the very highest pressure is required. Write today for this Catalogue.

**The Hardie Mfg. Co.**

222-224 North Los Angeles Street
Los Angeles, California

When Writing Advertisers Please Mention the Cultivator.

tion with manure increases the percentage of browning, and heavy use of nitrogen fertilizer produces a marked increase in the fruit from all trees except those bearing a very heavy crop. The trouble, however, does not develop seriously if the storage temperatures are held at 36 degrees or above. It usually develops more rapidly just after the fruit is taken out of storage.

When there is a light crop of large apples serious losses may be prevented by holding at a temperature of 36 degrees or above. The danger is sl when the crop is large. In general trouble may be looked for in Ye Newtown orchards of high fertilit the California coastal fog belt wi the humidity is high and there is l sunshine.

Copies of Department Bulletin 1 entitled Internal Browning of the low Newtown Apple, may be without cost from the United St Department of Agriculture, Wash ton, D. C.

# Potato Growers Confer

By Ernest Braunton

POTATO growers from various parts of California met at the Pasadena city farm, in the San Gabriel Valley, November 28, to swap experiences and plan for the future. One paradoxical thing happened on that farm: fertilizers did not fertilize. Assistant Farm Adviser Holmes had more than 90 plots under trial in Los Angeles County and all of them gave affirmative results except those on this farm. As against the check plot where none was applied all fertilizers showed a marked decrease in yield of potatoes.

Experts from eastern points have of late been employed by Pasadena to plan for the $1,500,000 sewer plant that city is to build. These men are authorities whose word generally passes unquestioned. They stated that exhaustive studies and analyses have shown that sewage leaves but little additional food for plants in the soil. But E. D. McSweeny, who rented the sewer farm for several years, called attention to the fact that through the aid of sewage he had taken off two crops of potatoes in one year that totalled 700 sacks to the acre. Another year he obtained 40 tons of corn silage per acre. He contends, and with some reason, that so much plant food is now resident in the soil that the best fertilizers will show negative results so long as the use of sewage is continued. But one soil amendment is needed and that is a cover crop. And those who came and saw agree with Mr. McSweeny.

**Fertilizers Highly Profitable**

L. C. Holmes gave a report on the results obtained through use of commercial fertilizers on the other 90 plots, where every fertilized plot showed a marked increase in yield over the unfertilized check plots. His report had to do with such fertilizers and did not touch on the use of cover crops, straws, etc. All used carried to the soil 40 to 42 pounds of nitrogen to the acre. Those plots carrying the largest tops also yielded the heaviest crops. The average yield of the unfertilized plots was 6,381 pounds or 58 sacks of 110 pounds each to the acre. The average of all the fertilized plots was 9,699 pounds or 88 sacks to the acre, a difference of 30 sacks. It is not necessary to give the various fertilizing elements used or the results obtained. We are primarily interested in what produced the best yield. The biggest gain was had where 80 pounds of ammonia sulphate and 320 pounds of fish meal were applied. The increase over the check plots was 66 per cent. The second best results were obtained where the same amount of sulphate was used with 500 pounds of cottonseed meal. Potash and phosphoric acid were not very effective, especially on the heavier soils, though they are in eastern states. The cost of the fertilizers was from $15 to $17 an acre, for an increase of 30 sacks of potatoes. Always use deep rooted cover crops in connection with commercial fertilizers. On one local ranch there was a five acre plot of five year alfalfa to be turned under, so advantage was taken of this to show its comparative value. On the plot with no cover crop the yield was 70 sacks to the acre; on melilotus, 121 sacks; and on the alfalfa, 150 sacks.

Bert C. Bougher, superintendent of the "Crown City Farm," said he had found Melilotus Indica the best cover crop. He has arranged, for the benefit of his guests, a fine display showing the cost, in detail, of growing an acre of potatoes. On the big Bo potato grader was a placard readi "Grading, Sorting and Hauling, $7. Then came a range of 11 farm im ments, each with a big placard sh ing the cost of operating it per a for one crop. From these we re Furrowing for irrigations, four ti at 50 cents, $2; plowing under co crops, tractors, $5, teams, $3.50; d ing, two times, at $1, $2; harrowi 75 cents; smoothing, 70 cents; 1 pounds of seed at 3½ cents, $35; ping and poisoning, 60 cents; draggi 50 cents; cultivating five times, at $5; furrowing out twice, at 60 ce $1; walking cultivator, once, $1; ging, $2.75. All these operations, e cost $109.95. Then came: 100 sa at 12 cents, $12; irrigating, se times, at $1.50, $10.50; depreciati $10; picking, $10; certification, roguing, $3; interest, $42; taxes, This makes a grand total as the c of growing an acre of potatoes $182.

**The Barbecue**

Then came the barbecued steaks a all the good things that go with the washed down with hot coffee. The was damp and chilly and the "eats" generously provided by the fa manager were deeply appreciated all. The gastronomic feats acc plished, an audience gathered in commodious and well ventilated barn for a resumption of the progra

E. D. McSweeny, chairman of potato growers department, report on the last year's work and progre He said that eight varieties had be tried but that only two could be reco mended; White Rose and Great vide, and they are about equal as crop in all ways. One other w recommended, especially for the w ter crop, the British Queen. The p season was a poor one, general though there were some marked ceptions. Travis Mings, a novice potato growing, living one mile so of El Monte, had, with the aid of go culture and barnyard manure, gro over 300 sacks to the acre.

One man at Shafter, Kern County, J. Peters, grew 250 sacks to the ac over a tract of 40 acres. Use certifi seed only; it is a mark of quality. T spring crop was left too long in t soil by many growers. It should dug quickly, as soon as ripe, especia if the weather is hot. It is not alwa necessary to spray the spring crop, b the fall crop should always be spraye Bugs, worms and other pests injur the last fall crop considerably and was not sprayed soon enough. present, marketing troubles are t most serious problem, but comple organization, taking in all the gro ers, is the only solution.

### MORE CROP, MORE FOOD

Dr. Cyril G. Hopkins, one of t world's greatest recognized authoriti on soils, said: "Any method by whi larger crops are produced without t addition of plant food must result a larger removal of plant food a consequently in a more rapid depletio of the fertility of the soil, wheth it be accomplished by crop rotatio by better cultivation, or by the use better seed. While the adoption good crop rotations, and of improve methods of cultivation and of seed s lection is always to be encourage it should not be forgotten that large crops grown by these better metho remove larger amounts of plant foo and whenever any plant food elemen becomes so depleted as to limit th crop yields, even under these bett methods of farming, then that elemen should be returned if it can be don with profit."

## COLORADO RIVER COMPACT

(Continued from Page 603)

pportionment of the use of part ie water of the Colorado River m is made to each of them with provision that further equitable rtionment may be made.

ticle 2.—As used in this com- (a) the term "Colorado River m" means that portion of the rado River and its tributaries in the United States of America. ). The term "Colorado River r" means all of the drainage area ie Colorado River system and all erritory within the United States merica to which the waters of Colorado River system shall be ficially applied.

). The term "States of the upper ion" means the states of Colo- New Mexico, Utah and Wyo-.

). The term "States of the lower ion" means the states of Arizona, ornia and Nevada.

). The term "Lee Ferry" means oint in the main stream of the rado River one mile below the h of the Paria River.

). The term "upper basin" is those parts of the states of ona, Colorado, New Mexico, Utah Wyoming within and from which rs naturally drain into the Colo- River system above Lee Ferry also parts of said states located out the drainage area of the rado River system which are now shall hereafter be beneficially ed by waters diverted from the m above Lee Ferry.

). The term "lower basin" is those parts of the states of ona, California, Nevada, New ico and Utah within and from h waters naturally drain into Colorado river system below Lee y and also all parts of said states ed without the drainage area of Colorado River system below Lee and shall hereafter be beneficially ed by waters diverted from the m below Lee Ferry.

). The term "domestic use" include the use of the water household, stock, municipal, min- milling, industrial and other like oses, but shall exclude the gen- on of electrical power.

ticle 3.—(a). There is hereby rtioned from the Colorado River em in perpetuity to the upper i and to the lower basin, respec- y, the exclusive beneficial con- otive use of 7,500,000 acre-feet of r per annum, which shall include vater necessary for the supply of rights which may now exist.

). In addition to the apportion- t in paragraph (a), the lower n is hereby given the right to in- se its beneficial consumptive use uch waters by 1,000,000 acre-feet annum.

). If, as a matter of interna- al comity, the United States of rica shall hereafter recognize in United Sstates of Mexico any t to the use of any waters of the rado River system, such waters l be supplied, first from the waters h are surplus over and above the egate of the quantities specified aragraphs (a) and (b); and if surplus shall prove unsufficient this purpose, then the burden of deficiency shall be equally borne the upper basin and the lower n, and wherever necessary the es of the upper division shall de- at Lee Ferry water to supply half of the deficiency so recog- d in addition to that provided in graph (d).

). The states of the upper di- on will not cause the flow of the r at Lee Ferry to be depleted w an aggregate of 75,000,000 acre- for any period of ten consecu- years reckoned in continuing pro- sive series beginning with the first of October next, succeeding the ication of this compact.

). The states of the upper di- on shall not withhold water and states of the lower division shall require the delivery of water ch cannot reasonably be applied omestic and agricultural uses.

). Further equitable apportion- t of the beneficial uses of the ers of the Colorado River system pportioned by paragraphs (a), (b) and (c) may be made in the manner provided in paragraph (g) at any time after October 1, 1963, if and when either basin shall have reached its total beneficial consumptive use as set out in paragraphs (a) and (b).

(g). In the event of a desire for further apportionment as provided in paragraph (f), any two signatory states, acting through their governors, may give joint notice of such desire to the governors of the other signatory states and to the president of the United States of America, and it shall be the duty of the governors of the signatory states and the president of the United States of America forthwith to appoint representatives whose duty it shall be to divide and apportion equitably between the upper basin and the lower basin the beneficial use of the unapportioned water of the Colorado River system as mentioned in paragraph (f), subject to the legislative ratification of the signatory states and the congress of the United States of America.

**Article 4.**—(a). Inasmuch as the Colorado River has ceased to be navigable for commerce and the reservation of its waters for navigation seriously limit the developments of its basin, the use of its waters for purposes of navigation shall be subservient to the uses of such waters for domestic, agricultural and power purposes. If the congress shall not consent to this paragraph, the other provisions of this compact shall nevertheless remain binding.

(b). Subject to the provisions of this compact, water of the Colorado River system may be impounded and used for the generation of electrical power, but such impounding and use shall be subservient to the use and consumption for such water for agricultural and domestic purposes and shall not interfere with or prevent use for such dominant purposes.

(c). The provisions of this article shall not apply to or interfere with the regulation and control by any state within its boundaries of the appropriation, use and distribution of water.

**Article 5.**—The chief official of each signatory state charged with the administration of water rights, together with the director of the United States reclamation service and the director of the United States geological survey, shall cooperate ex-officio:

(a). To promote the systematic determination and coordination of the facts as to flow, appropriation, consumption and use of the water in the Colorado River basin and the interchange of available information in such matters.

(b). To secure the ascertainment and publication of the annual flow of the Colorado River at Lee Ferry.

(c). To perform such other duties as may be assigned by mutual consent of the signatories from time to time.

**Article 6.**—Should any claim or controversy arise between any two or more of the signatory states (a), with respcet to the waters of the Colorado River system not covered by the items of this compact;

(b). Over the meaning or performance of any of the terms of this compact;

(c). As to the allocation of the burdens incident to the performance of any article of this compact or the delivery of the waters as herein provided.

(d). As to the construction or operation of works within the Colorado River basin, to be situated in two or more states, or to be constructed in one state for the benefit of another state; or (e) as to the diversion of water in one state for the benefit of another state; the govern-

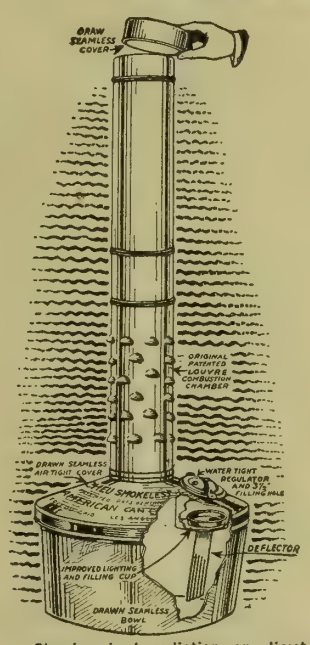
*The Standard of all Orchard Heaters Delivered this year in the United States*

# The SCHEU SMOKELESS ORCHARD HEATER



Showing heat radiation on direct line from the metal of Scheu Smokeless Orchard Heater. Note greatest heat is close to ground.

The heater recommended by the Citrus Growers' Committee, being chosen after competition with all other makes of heaters. Approved by the Fruit Growers' Supply Company, Los Angeles, representing 10,000 growers of Sunkist Oranges and Lemons. 100% of their orchard heater purchases this year were Scheu Smokeless Orchard Heaters.

Not only have we sold and delivered more Orchard Heaters in the United States than any other manufacturer, but in years past hundreds of thousands of Scheu and Canco Heaters have been purchased by progressive growers all over the United States.

## *They Furnish Real Frost Insurance*

Grape growers, vegetable raisers, nurserymen, agricultural experiment stations, deciduous and citrus growers in widely separated locations, from Texas to Oregon, Maine to California, have used Scheu Smokeless Orchard Heaters with uniformly successful results.

### THE ORIGINAL LOUVRE STACK

Scheu Heaters embody the original patented louvre combustion chamber. Give the greatest radiation of heat where you want it—close to the ground. Special filling cup, automatically fills lighter and permits rapid lighting of many heaters by one man. Maximuum heat capacity obtained in shortest time. Actual tests show Scheu Heaters consume the minimum of fuel. They burn 20 hours without refilling. Equipped with regulator, so you can increase or decrease amount of heat at will.

### BUILT TO GIVE LONG SERVICE

Have drawn seamless bowl and cover. Proved by experience to be the best type of construction.

PEAR ORCHARD IN FULL BLOOM AT PLACERVILLE, CALIF.—Protected by Scheu Smokeless Orchard Heaters.

### *GET THIS PROTECTION FOR YOUR ORCHARD*

Can you afford to take chances of frost injury? One night's frost will destroy a season's labor. Follow the lead of other progressive growers. Protect your crops from their greatest foe.

Write for 48 page booklet on Frost Insurance.

We also manufacture Canco Smudge Pots from 40c up. Ask us about these and other heaters.

### *READ WHAT GROWERS SAY*

**Squaw Butte Orchards, Emmett, Idaho:**
"Saved Italian prune crop with temperature of 23 degrees."

**Cashmere, Wash.:**
"Gave us an even temperature of 34 degrees. Outside it was 26 degrees."

**Hamilton City, Cal.:**
"Outside temperature 26 —raised it to 32 and held it there."

Saved citrus crop in California when temperature fell to 18° above zero, winter of 1921-22.

**AGENTS WANTED** Write us for our money making plan for agents. Desirable territories now open.

## Profit By Better Power

TO insure fruit of the size and quality that will bring the highest market prices there must be no unnecessary loss of moisture from the soil during the long dry season. This means frequent, thorough cultivation, for which dependable power is required, in compact, easily handled form. For this important work

# CASE FARM TRACTORS

**are being used more and more in well managed, profitable orchards.**

Case tractors are popular among fruit growers because:

They are compact, remarkably easy to handle, and can be used effectively even in crowded orchards.

Dependable power is furnished by Case-built engines of most efficient type—four cylinder vertical, with well balanced parts designed for continuous operation under heavy loads, and with ample reserve power.

Fuel economy is secured by special manifolds with variable heat control, and by a simple carburetor—an arrangement that results in extreme efficiency in the use of low grade fuels.

Durability—important to fruit growers—is assured by the use of special steels, high grade roller and ball bearings, by careful attention to lubrication and by enclosing all working parts so that dust and dirt cannot enter. All bearings are replaceable and all working parts easily accessible for adjustment.

Because of these advantages, Case tractors are both practical and profitable in orchard work. Complete information is contained in our new book, "Better Farming With Better Tractors", just off the press. Write for a copy today.

# This Month in the Ornamental Gard

## Southern California

By Ernest Braunton

WHILE we may continue planting all kinds of bulbs, December may properly be called the rose month. In cold climates roses are planted in the spring, but here they grow throughout the winter and if planted now will bloom just as the "eastern" gardener is planting his. It is better now to plant bare root dormant bushes.

In all cultivated areas stable manures should be applied to keep the plants in the greatest possible vigor. With lawns the case is different. While the grass still grows its development is not so great as during warmer weather and much food is not needed, for grass will always grow and look well at this season of the year. When weather begins to warm up in the spring, any time after January, the grass will commence to grow and needs food. If fertilizer is applied now the winter's rains will carry it below the root zone if soil is light or wash it off if soil is hard and the whole nutrient value is gone from your lawn. Growing crops need food so put fertilizer in the garden proper now.

### Prune and Plant

December is the time nearly all Californians make an annual clean up and prune. Trees and plants with thick heavy tops become water laden in rainy weather and often are broken down. A judicious pruning of some shortening and much thinning will avoid breakage and improve the plants or trees. However, do not prune annual blooming roses such as Cherokee, Beauty of Glazenwood, Banksia, etc., or you will have no spring flowers. For same reason do not prune shrubs such as deutzia, lilac, philadelphus, etc. The time to prune these is just after they blossom.

Set out pansies, snapdragons, stocks, and all sorts of perennials. Sow out in beds seeds of acrolinium, alyssum, bartonia, calendula, candytuft, centaurea, clarkia, collinsia, coreopsis, eschscholtzia, godetia, larkspur, leptosyne, linum, lupine, mignonette, nemophila, poppies and sweetpeas. Examine closely all plants from time to time for aphis or green fly. Usually these may be kept in check by a fierce hosing once or more each day. But if they become too burdensome it will be better to dust tobacco powder on or spray with soap suds with some nicotine (tobacco) content. During cold weather all evergreen plants and trees are in somewhat dormant condition and sprays for killing insects may be applied in greater strength than during the growing season.

## Northern California

By A. R. Gould

HERE will be much to do in the ornamental department and considerable planting will be necessary as well as cleaning up the beds and borders. The shrubs will need digging around and manuring, and this may also apply to the roses. The dahlias should have ere this been dug up and carefully labled and stored for the winter. The violet beds will need cultivating and dressing with manure as this will encourage a long flowering season.

Many subjects to which we look for our winter and spring flowers must be planted and the successional sweet peas may be sown. The lawn should be weeded and rolled. The perennial borders will also require re-planting, and the liberal use of a good fertilizer will give good results.

### Early Flowering Gladiolus

Early display of gladiolus may be secured by planting soon about four inches apart in rows or groups. For the cut flower beds they are more convenient to handle if planted in rows 18 inches or more apart. The soil should be well prepared with manure.

### Violas and Myosotis

These make a perfect carpet bed of tulips and should be pla after the bulbs are in. No mor fective sight can be imagined th bed of blue violas with a bed of low Darwin tulips or a bed of myo and scarlet tulips. Plant these ou soon as possible in the beds 12 inches apart in well prepared so

### Bulbs

There is yet time to plant some jects such as the tulips and late ering daffodils, also hyacinths. sonias and Montbretias are useful especially for grouping in the bo and for the cut flower garden. Watsonias are white, lavender pink while the Montbretias are ora and yellow. When planting bulb ways manure the ground and p an inch or two deeper rather than the bulb too near the surface of ground as deep planting encour a vigorous rooting system and means good quality flowers.

### Sweet Peas—Early Flowering

Those who were anxious to choice blooms for Christmas of co sowed the seed very early in Au and September, and these should be showing bloom but will need a application of liquid manure from on twice a week, and if they are gr ing on wire supports should be in. If you failed to plant any of th popular flowers there is still time, if sown now they will bloom by Ma or April. They must be sown in well prepared. If the aphis are t blesome, which they usually are to young tender shoots, spray with bl leaf 40, an effective nicotine solut for these pests.

### Liliums

These comprise a very large gr of wonderful flowers and they sho be much more widely planted t they are as they flower for some t and come in some charming colors orange, yellow, pink and white a grouped in the border, are very ef tive indeed. They are of fairly e culture and if left undisturbed fr year to year will become much m numerous as they increase rapidly offsets. They should be planted ab 12 inches apart in groups of five six of each variety. Plant so bulbs at least six inches deep. So of the very best varieties are the lowing. Lilium longiflorum gigante L. candidum, L. Harrisii, L. Auratu L. Krameri, L. speciosum rubrum. speciosum Henryi, L. auratum pla phyllum, L. elegans (orange), L. m nificum, L. tigrinum (single and d ble) L. incomparable, the native li Humboditii, the leopard lily, par linum, and Washington lily, and la but not least, is the most beautiful L Regale, the flowers of which are wh suffused with pink and centered w canary yellow. This lily, introduc only a few years ago from China the noted collector, E. H. Wils should be in every garden as it is gem and fast gaining in popularity.

### Japanese Iris

These may be grown to perfection a moist situation and they should planted in low ground. A basin shou be formed and these planted in grou so that they can be supplied wi plenty of water. They come in a ve wide range of colors in which are so delicate blues and purples, also mau and white gray, crimson and lila They grow on long stems and ma excellent cut flowers. They need w manured ground and may be plant 16 to 18 inches apart as they eventu ly form large clumps and in a fe years may be subdivided for repla ing. This is the best month to pla and they may be secured in named v rieties or mixed.

### Subjects to Plant Now

No time should be lost in plantin the following for winter and sprin flowers; pansy, double daisy, primul (Veris, polyantha, Kewensis and Mal coides), dianthus, aubretia, wallflowe snapdragon, scabiosa, foxglove, holl hock, phlox, sweet William, pentst mon, campanula, delphinium, cann coreopsis, cineraria, geum, gaillardi

heuchera, stock, and aquilegia, or columbine. Most of the above mentioned are perennial and will continue in flower for some time. Before planting these prepare the soil with manure and water after planting.

**Gazania Splendens**

This plant is usually admired by all and has orange and yellow flowers with dark centers. They are a blaze of color when the sun shines hence they are especially adapted to an open situation. In our cities they are often used on parking strips along the sidewalks. They should be planted 12 to 16 inches apart in fairly good soil. They may be planted now.

## USE OF GYPSUM ON ALFALFA

**By Professor George A. Olson**

ORDINARILY 20 to 30 pounds of nitrogen added to each acre of soil annually may be considered a good gain. Dr. Lipman of New Jersey experiment station tells us of a three year experiment where alfalfa increased the nitrogen content of the soil 500 pounds per acre. In the 15 tons of alfalfa harvested there was 750 pounds of nitrogen. The total gain of nitrogen as a result of growing alfalfa three years was therefore 1250 pounds. This value is equivalent to the nitrogen in 8300 pounds of nitrate of soda.

The source of the nitrogen was the air, but it required a legume such as alfalfa and a suitable strain of bacteria to fix the air nitrogen. Usually large gains of nitrogen are obtained in soils low in nitrogen. In some cases as little as 10 per cent of the nitrogen may be secured from the air. Undoubtedly the biggest gains in nitrogen are obtained during periods of big crop yields.

In this connection the writer has made a study of the composition of alfalfa grown on fertilized and unfertilized fields. The following data should prove of value to the farmer who aims to maintain the fertility of the land. The results are calculated on basis of pounds of elements in one ton of alfalfa.

| | No treatment | Limestone | Agri. Gyp | Acid Phos. |
|---|---|---|---|---|
| Nitrogen | 35 | 36 | 37 | 37 |
| Potassium | 31 | 28 | 30 | 31 |
| Calcium | 19 | 30 | 26 | 27 |
| Phosphorus | 6 | 6 | 7 | 6 |
| Sulphur | 8 | 9 | 9 | 9 |

The nitrogen, phosphorus and sulphur were practically constant in the alfalfa from both the fertilized and unfertilized plots. The potassium content of the alfalfa from the limestone plot was slightly low compared with the other three but the calcium content was high. The lowest amount of calcium was found in sample taken from the untreated plot. It was also found that the sulphur content of the alfalfa exceeded the amount of phosphorus.

In this experiment the two year yield of alfalfa grown on the limestone treated plot was 4.9 tons campared with 4.7 tons for the untreated plot. The yield obtained on the agricultural gypsum treated plot was 8.1 tons compared with 7.7 tons for the acid phosphate treated plot. Thus it is seen that limestone in this experiment was favorable to a slight increase while agricultural gypsum and acid phosphate resulted in marked increases in yield.

It is obvious that limestone was not the limiting factor, otherwise marked increases would have occurred following the application of limestone. On the other hand agricultural gypsum and the gypsum in acid phosphate resulted in increases of 72 to 64 per cent respectively. The following data show the effect of increased yields on the removal of plant food from the soil.

| | No treatment | Limestone | Agri. Gyp | Acid Phos. |
|---|---|---|---|---|
| Nitrogen | 165 | 176 | 301 | 281 |
| Potassium | 147 | 139 | 241 | 241 |
| Calcium | 135 | 146 | 210 | 207 |
| Phosphorus | 26 | 28 | 58 | 48 |
| Sulphur | 37 | 40 | 69 | 70 |

It is doubtful if a better illustration could be given to show how enlarging the yields increases the removal of plant food from the soil. This view holds good regardless as to whether or not fertilizers are applied to the soil. It also shows that 37 to 40 pounds of sulphur was not sufficient and the increased yields were only possible where 69 to 70 pounds of sulphur were available.

As previously stated the nitrogen removed need not concern one since the alfalfa with a suitable strain of bacteria had the property of increasing the nitrogen content of the soil by fixing nitrogen taken from the air. Generally it is more than likely that the supply of potassium in the soil exceeds that of any other plant food with the possible exception of calcium in calcareous soils. Under such conditions there is no need of applying potassium to the soil as long as potassium continued to be available or could easily be made available to plants. In some cases applications of limestone are necessary in order to correct soil acidity.

The plant need for phosphorus and sulphur should be watched because these are the elements which are likely to be low in the soil. In the west applications of phosphorus fertilizers free from sulphate sulphur have not shown any appreciable benefit. On the other hand, applications of agricultural gypsum, sulphur or sulphuric acid result in increased yields because sulphur food is the most important food factor involved in increased production.

The above recorded yields were obtained with applications of limestone at the rate of 1000 pounds and agricultural gypsum and acid phosphate at the rate of 200 pounds each per acre. The amount of calcium applied in form of limestone was estimated as 380 pounds; in the form of agricultural gypsum as 48 pounds and in the form of acid phosphate as 48 pounds. The sulphur applied in the form of agricultural gypsum was 37 pounds and in acid phosphate which contains gypsum it was 16 pounds.

In the limestone treated plot 234 pounds more calcium was applied than removed by the crop and the calcium removed by the crop taken from the unfertilized plot was 11 pounds less than was removed from the limestone treated plot, which would indicate that the supply of calcium in the soil was ample for crop needs. This is more clearly shown in the agricultural gypsum treated plot where the calcium exceeded the amount applied by 162 pounds and in case of the acid phosphate treated plot by 159 pounds. These figures do not take into consideration the calcium removed by the alfalfa on the unfertilized plot. When the quantity of calcium removed by the unfertilized crop is deducted from the calcium removed by the agricultural gypsum crop there is a soil loss of calcium of 27 pounds, and for acid phosphate it is 24 pounds. Thus we see that the calcium in the agricultural gypsum has helped to conserve the supply of calcium in the soil.

The phosphorus removed in the agricultural gypsum treated plot exceeded that removed in the check plot by 32 pounds and in case of the acid phosphate treated plot by 22 pounds. Here again there is evidence that the supply of available phosphorus was ample, otherwise the crop grown on the agricultural gypsum treated plot would not have increased 74 per cent as

*That tense moment with dogs at point, just before the whirr of wings brings action. The gun will snap to the shoulder with more confidence—results will be surer—if the shells are loaded with Du Pont or Ballistite.*

Du Pont makes powder—not shells. Du Pont Powders are loaded in every brand of shell. The name "DU PONT" or "BALLISTITE", printed on the carton and the top shot wad, tells you what powder you are shooting. Specify the powder when you buy the shell.

# NITRATE OF LIME

TRADE MARK

**GROWERS!**

**To Secure Better Set, and to Secure Better Fruit Use Nitrate of Lime.**

## It Pays to Use NITRATE OF LIME Because:

It contains 13% nitrogen, equivalent to 15.8% ammonia, **in the most available form**

It does not contain any ingredients detrimental to soil or plant life—on the contrary it supplies the soil with about 30% soluble lime, which is a valuable adjunct to the nitrogen.

It is quick acting as it absorbs moisture and dissolves completely.

**Nitrate of Lime** is packed in strong wooden barrels to prevent waste and caking.

Write for booklet—free—giving complete information and telling how **Nitrate of Lime** is produced.

**San Francisco Office; 222 Balfour Building**

compared with 62 per cent for the acid phosphate treated plot.

The removal of sulphur by the crop grown on the agricultural gypsum and acid phosphate treated plots exceeded that removed on the unfertilized plot by 32 pounds and 33 pounds respectively. The quantity of sulphur in the form of agricultural gypsum which was applied was 37 pounds and in case of acid phosphate it was 16 pounds. In other words applications of agricultural gypsum tended to conserve the sulphur content of the soil while acid phosphate tended to lower it. A loss of 17 pounds of sulphur due to acid phosphate tended to lower it. A loss of 17 pounds of sulphur due to acid phosphate is approximately equivalent to the sulphur contained in 100 pounds of agricultural gypsum.

Obviously agricultural gypsum is important plant food and when applied tends to conserve the supply of sulphur in the soil. In soils low in phosphorus and calcium an application of 100 pounds of finely ground rock phosphate would more than replenish the calcium and phosphorus removed in the increased yield following the use of agricultural gypsum and at the same time keep the soil in a state of fertility equal to at least what it was in the absence of fertilizer treatment. Or, if the alfalfa was fed on the farm these fertilizer elements would be nearly all returned and the need of buying rock phosphate or fearing that excessive yields would ultimately deplete the soil of its fertility would prove to be incorrect.

The increased nitrogen content of the soil as a result of growing alfalfa would more than pay for expenditures involved in purchase of agricultural gypsum and in special cases for rock phosphate since nitrogen is the most expensive plant food sold. The increased yields obtained would more than cover the cost of agricultural gypsum. As a matter of fact the cost of agricultural gypsum may be considered small as compared with the value of the increased crop. But equally as important is the fact that agricultural gypsum is plant food which supplements that contained in the soil and thereby increases the productive power of the soil. The indirect benefit of growing alfalfa with agricultural gypsum as compared with growing alfalfa alone is a very important subject in itself.

# Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### A Miner's Inch

Can you tell me through your paper how much water one-fifth of a miner's inch would be for 30 days accumulation per acre? Could you tell how to measure it in an open ditch? Will it be enough to water a prune orchard in heavy ground? We water in June and August. What is the average amount allowed in the state per acre by water company? We are given one-fifth miner's inch, 30 days' accumulation, for one acre.—Subscriber, Los Molinos.

A miner's inch is variable and depends upon the section or state in which the computation is made. That is, in California the usual practice is to compute the miner's inch under a four inch pressure. However, legally in California, a miner's inch is the amount of water which will flow through a one inch aperture under a pressure of six inches. A miner's inch under four inch pressure is equal to nine gallons per minute. Nine gallons per minute means 388,800 gallons in 30 days. For one-fifth miner's inch it would be one-fifth of 388,800, or 77,760 gallons, and as there are 27,150 gallons per acre-inch your fifth of an inch would be nearly equivalent to 3 acre inches in 30 days, or to be exact, 2,864 acre-inches. Seepage and evaporation are not considered of course. As to whether this would be sufficient depends upon soil, sub-soil conditions, tillage and so many other factors that we can only generalize and say that if properly handled with some of it applied in winter months and conserved it should be abundant. The amount in this state varies greatly according to section. In the Imperial Valley four acre-feet is thought to be necessary. Expressed in miner's inches an inch to 10 acres, an inch to eight acres, an inch to four, or even as much as an inch to every acre of orchard is demanded. Yet there are thousands of acres of prunes in the state which are never irrigated at all. Under the conditions you mention we think one-fifth of a miner's inch should be sufficient for your use.

### Straw for Fertilizer

I have a four year old apricot orchard on southern slope, which is not doing very well. No chance to irrigate. Would like to put fertilizer straw in ditch above trees alongside hill and cover with dirt. I know of barley straw for sale. What is it worth compared to Lima bean straw by weight comparison?—Subscriber, Moorpark.

We doubt if either barley or bean straw will give the desired result in your case. Well rotted barnyard manure would in our opinion give best results but whatever you use apply it so that the winter rains will aid in converting it into plant food for use of the trees when they begin their spring growth. Outside of improving the physical condition of the soil, barley straw has very little fertilizing value. In nitrogen content it has less than half that of bean straw and only about one-third as much phosphoric acid. In potash there is very litttle difference although the bean straw is a little ahead.

### Mottle Leaf

What is the cause of mottle leaf on citrus trees? Will nitrate of lime, nitrate of soda or sulphate of ammonia cause mottle leaf? What is the best method for getting rid of it? —Subscriber, Bryn Mawr.

Mottle leaf in citrus trees may be caused by too much water, excessive applications of stable manure, improper drainage, or most any condition that disturbs the proper functioning of the root system. It is an indication that something is wrong but does not necessarily indicate what that condition is. Excessive applications of nitrate of lime, soda or sulphate of ammonia might cause the trouble. The only remedy is to determine the cause and attempt to rectify it. If we had a more complete report on your soil conditions we might be able to give you more definite advice on the subject.

### Why Blackberries Do Not Ripen

In the California Cultivator under date of November 18 on page 534 appears an inquiry stating that blackberries do not ripen. May I call your attention to the fact that this difficulty is quite prevalent in the Himalaya blackberries throughout the state. It is due to the presence and work of a small mite which we are calling the blackberry mite which works in the flowers and on the developing druplets, causing abortion and stunting. In some cases the fruit is stimulated to a large size but ripening is prevented. The mite may be controlled by spraying the vines in the spring just as the blossom buds begin to appear with four gallons of commercial lime-sulphur to 100 gallons of water or by spraying the plants any time during the summer with five pounds of wettable sulphur to 100 gallons of water.—E. O. Essig.

### New Plums

"President Blue" plum mentioned by your correspondent in issue of November 25 is probably "President." It is one of many others I imported from England years ago, at the same time I introduced Grand Duke, Diamond, Czar, etc. Like all domestica plums, it is more at home where winter climate is colder. The triloba or Japan-

ese plums and their hybrids succeed much better in the south, and there is an ever increasing assortment of these, some of the best coming from our friend Millard Sharpe of Vacaville, "Becky Smith," for instance, a magnificent shipper and of good quality.—Leonard Coates.

### Aphis—Red Spider

What are the best remedies for controlling melon aphis? What is the remedy for controlling red spider on fruit trees and at what time of year should remedy be applied?—Subscriber, Dos Palos.

At this time of the year the best work with melon aphis consists of carefully gathering and burning all weeds in field or along ditch banks. This will greatly reduce the first infestation. However, as soon as they begin to appear in the spring give thorough treatment with a dependable nicotine dust. As to red spider on fruit trees, note in account of the Berkeley meeting of fruit growers on page 555 of issue of November 25. Also write the University of California, Berkeley, and ask for Bulletin No. 347, "The Control of Red Spider in Deciduous Orchards." In a word the treatment consists of spraying with lime-sulphur solution about late June or early July, or if preferred, one may use sulphur as dust spray.

### Lime on Orchard

Kindly let me know as soon as possible how much quicklime should be used to the acre. I have a prune orchard. How should it be put on? Is this the best time of year to get results?—Subscriber, San Jose.

We are not entirely clear as to the need of the inquirer. If by adding quicklime the intent is simply to make application of lime to the soil only apply an exceedingly small quantity. Quicklime has the quality of reducing vegetable mold; it burns the soil if applied in a large quantity. The best form of lime to apply is either the ordinary crushed lime rock or that secured from deposits of the marine shells which are found in many parts of the state. Many think this decomposed shell is the best form of lime to apply. This may be applied in any quantity from a half ton to the acre and up according to the needs of the soil.

### English Bull Dog

Kindly tell me color of English bull dog. Is he white or brindle or are there some white and some brindle? I have been told there are two kinds.—Subscriber, Lindsay.

The English bull dog is the bench legged undershot dog, usually brindle but may be fawn, tan or white or a mixture of any of them. The English bull terrier is the tall, pure white dog with the pointed ears and long tail. These are the only two bull dogs. Boston and French terriers are not bulls though commonly called such.

### Chrysanthemums

What shall I do with my 'mums after they are through blooming? When is the best time to take up and divide clumps of gladioli?—Subscriber, Redlands.

It is not necessary to do anything with the 'mum clumps except you wish to use the ground for other plants. Allow them to remain until March, when you may either take cuttings from or divide into small bits and replant. Take up and divide gladioli at once. Keep bulbs in cool dry place for 60 days and replant.

### Vegetable Pointers

Please give care and cultivation of Brussels sprouts. Should I strip the plants of their leaves and when? Is it beneficial to cabbage and lettuce to feed them liquid manure? How close to rows of beets and turnips should one hoe? Should head lettuce be cultivated after it begins to head? Should cauliflower be cultivated till it begins to head or when?—Subscriber, Three Rivers.

Brussel sprouts is closely allied to kale and requires similar treatment. It requires a longer season than cabbage. The adjacent leaves are cut off as the tiny heads begin to grow, but leave a large tuft at top. Like kale and cauliflower it is a cool weather crop. All plants are benefited by liquid manure, but feed little and often; avoid strong doses. Hoe as close as you like to beets and turnips so long as it is shallow enough not to cut roots. If lettuce and cauliflower have been well watered and cultivated to beginning of heading and are free from weeds further cultivation will not be necessary.

### March Planted Gladioli

Can I safely plant gladioli bulbs as late as March and April and will they flower the first summer? Can I plant seeds of bellis, heliotrope, lobelia, phlox, pyrethrum and snapdragon in the garden or should they be planted in a hotbed first?—Subscriber, Durham.

Gladioli bulbs may safely be planted from January to June if well kept, though the first month is usually the better time. Mature bulbs always bloom the first year. None of the flowseeds you list need be planted on hot bed and all will grow in the open garden, but some, such as heliotrope and lobelia, need more care than the garden usually affords and should be planted in boxes or flats. Some good gardeners plant all these in boxes and later transplant to the garden.

### Spiders

There are so many spiders of all kinds around this place that I am afraid of them. Is there anything one can sprinkle around the room to drive them away? I never see anything in the paper about them.—Subscriber, Hynes.

Spider bites do not as a rule cause any serious results. Where one is bitten an application of a few drops of ammonia will probably suffice to counteract the poison. For controlling the pest we presume there could be nothing better than scattering about the place liberal quantities of buhach, tobacco dust, or, perhaps better, nicotine dust. In warm weather a liberal scattering of flowers of sulphur will probably prove so offensive to the spiders that they will leave.

### Manure for Garden

Is old or fresh fertilizer better for garden? Is there any advantage in leaving some fertilizer on top of soil instead of turning it all under?—Subscriber, Three Rivers.

Thoroughly rotten manure is of course quicker of action and carries much less danger in application. Besides its decay has caused the death of the greater portion of weed seeds. However, as a general proposition it may be said that there is less loss in the application of fresh manure, plowing under deeply and allowing to decay in the soil. There is less loss in applying all manure under the soil than allowing to remain on the surface and burn because of the sun's heat. Where one wants the effect of a mulch or protection of surface soil coarse strawy manure is fully as good as the more valuable, thoroughly decayed material.

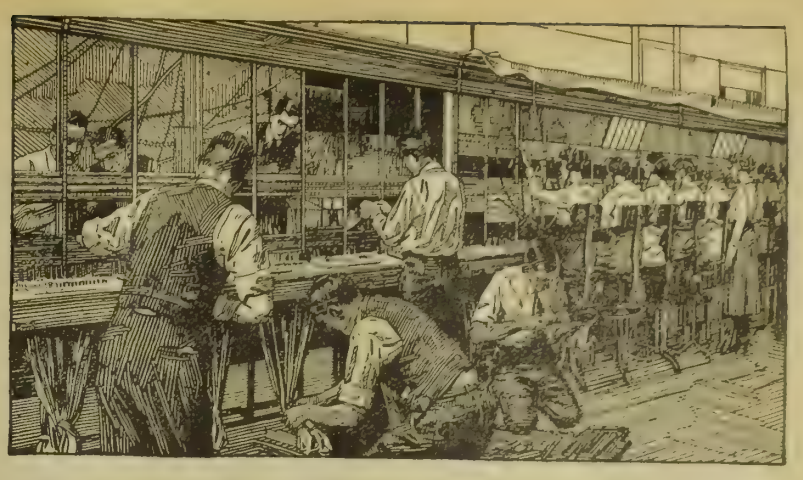
### Figs from Cuttings

Will you please tell me when is the best time to plant fig cuttings? What is the best way to sprout them?—Subscriber, Gridley.

Figs are readily grown from cuttings. The usual method is to select thoroughly ripened wood, cut from tree when entirely dormant (during this month or next), choosing wood the size of one's finger, make cuttings 12 or 14 inches long, tie in bundles of 100, dig trench about four inches deeper than the length of the cutting, place bundles in trench, bottoms of cuttings up, coyer with three or four inches of sand or sandy soil. Within a few weeks they will probably granulate and be ready for making little rootlets when they should be taken from the trench and planted in nursery row.

### LOS ANGELES POTATO GROWERS

The potato growers department of the Los Angeles County farm bureau has elected the following executive committee to serve for 1923: J. H. Aulenbrock, Los Angeles; B. C. Boughter, Alhambra; H. L. Boyer, Van Nuys; T. H. Lambert, El Monte; A. J. Muller, Van Nuys; J. G. Showalter, Van Nuys; W. V. Stahl, Zelzah.



# Expansion

A million new subscribers were linked to the Bell System during the past two years—putting into operation a million new routes of talk, and a corresponding increase in all intervening facilities such as switchboards, cable and long distance lines.

No other country is so well equipped as the United States for telephone communication. Yet, because of this—because the telephone is so useful—the demand for service keeps growing greater.

The growth of telephone demand in the United States is greater than the growth of population. It is an intensive growth. An increasing percentage of the population is seeking telephone service.

The Bell System is providing for more investment, further technical achievement, more wires, switchboards and stations—and more subscribers. The American people require the best service. The best service means the most comprehensive service, not only for the necessities of to-day, but for the necessities of the future.

### IT ISN'T THE THING YOU DO

It isn't the thing you do, dear,
  It's the thing you leave undone
That gives you a bit of a heartache
  At the setting of the sun.
The tender word forgotten;
  The letter you did not write;
The flower you did not send, dear,
  Are your haunting ghosts tonight.

The stones you might have lifted
  Out of a brother's way;
The bit of a heartsome counsel
  You were hurried too much to say;
The loving touch of the hand, dear,
  The gentle, winning tone,
Which you had no time nor thought for
  With troubles of your own.

Those little acts of kindness
  So easily out of mind,
Those chances to be angels
  Which we poor mortals find,
They come in night and silence,
  Each sad reproachful wraith,
When hope is faint and flagging
  And the chill has fallen on faith.

For life is all too short, dear,
  And sorrow is all too great,
To suffer our slow compassion
  That tarries until too late;
And it isn't the thing you do, dear,
  It's the thing you leave undone
Which gives you a bit of heartache
  At the setting of the sun.—Margaret E. Sangster.

### PEGGY WEGGY'S MUFFFIN WISH

By Annette Squire

PEGGY WEGGY and Jerry Dumpling were sitting on their garden wall in the shade of an apple tree, wishing.

"I wish," said Peggy Weggy, "that I could taste one of those muffins that Mother Goose's Muffin Man sells."

"I wish that, too," said Jerry Dumpling.

"The muffins are fat," said Peggy Weggy, "and shaped just like Primrose Hill, with the tip-top of them all high in the middle. And Doctor Foster says they are good—all branny inside!"

And at that very minute they saw Doctor Foster coming up their lane from Gloster and Mother Goose coming down it from Primrose Hill, and the two met and stopped to talk in the shade of the apple tree, right in front of Peggy Weggy and Jerry Dumpling.

The children wanted to say "How do you do," but nice children never interrupt their elders, and little Doctor Foster had begun to talk to Mother Goose before he had reached their shade. He is fat and very jolly.

"Well! What has brought you out this fine day, Mother Goose?"

"That careless Humpty Dumpty," replied Mother Goose. "We need you badly, for all the king's horses and all the king's men could not put Humpty Dumpty together again!"

"Dear me!" exclaimed Doctor Foster, "what has happened to Humpty Dumpty this time?"

"He sat on his mother's garden wall again, and again was not careful. Of course he had another fall, and broke—just like an egg!"

"Dear me! And what did his mother, Mrs. Dumpty Egg say?"

"She said, 'Didn't I tell you to be careful?' Of course she has told him that ever so many times. Ever so many times she has told him to see that he does well whatever he does. But you see, Doctor Foster, the trouble with Humpty Dumpty is this, while he would like to do things well, he has never understood that, if anyone ever learns to do a thing well, he must very many times do it very carefully. Now I have heard," said Mother Goose, "that those dear children, Peggy Weggy and Jerry Dumpling know how to sit on a garden wall."

Peggy Weggy and Jerry Dumpling couldn't help smiling at this. Praised by Mother Goose! How jolly!

"And I thought," went on the nice old lady, "that if you could help Humpty Dumty, I might ask those two dear children to show him how to sit on a wall."

"Well," said Doctor Foster, "I'll see if I can fix him up. I remember that before I had learned how to walk in a shower of rain, I went to Gloster and fell in a puddle up to the middle——"

Jerry and Peggy laughed aloud at this, and the little doctor cried, "Aha! Here are those children on their garden wall now! Tell me, children, how should I have stepped in Gloster?"

"Carefully," laughed Peggy Weggy and Jerry Dumpling.

"Then you come down from the wall that way," said Mother Goose, smiling, "and we'll all go help poor Humpty Dumpty."

So they went up the lane, around Primrose Hill, inside a stone garden wall, and into the Dumpty house. And when Doctor Foster had fixed up Humpty Dumpty, Peggy Weggy and Jerry Dumpling took him out to the wall again and talked to him. And when they had made his see that if he did things carefully he would be a boy who knew how, his mother was so wonderfully pleased that she called,

"Polly, put the kettle on,
Molly call the Muffin Man,
Sally, blow the bellows strong!
And we'll all have tea!"

And the Muffin Man's muffins were fat, and were shaped like Primrose Hill, and were all branny inside! And Doctor Foster remarked that they were good! And they were!

### THE MUFFIN MAN'S WARES

By Annette Squire

**Primrose Branny Muffins**

Two eggs, well beaten; two cups milk, two tablespoons melted butter or cooking oil; one cup flour sifted with one level teaspoon salt and two rounded teaspoons baking powder, two cups graham flour, one cup krumbled bran, and four tablespoons of sugar. Beat well and bake in a moderate oven. Makes 12 fat muffins.

**Primrose Popovers**

One egg, well beaten, one tablespoon of melted butter or cooking oil, one cup milk, one tablespoon molasses, one cup flour sifted with one-half teaspoon salt and one rounding teaspoon baking powder, one-fourth cup krumbled bran, and one-fourth cup raisins with dash of cinnamon. Beat hard and bake in rather hot oven.

**Mother Goose Bran Cookies**

Cream with one cup sugar one-half cup butter. Add two tablespoons milk, one teaspoon vanilla, two eggs, two tablespoons shredded coconut, two and one-half cups any cooking bran, two teaspoons (rounded) baking powder, and flour to roll. Allow space in the pan for the cookies to spread and use a moderate oven. You can omit coconut, and still have cookies that kiddies will like.

### MANY LIKE HIM

"Poor Jones!" said Jones's neighbor to a friend, as a tired-looking man passed him on his way out of the trolley car. "He suffers terribly from from nerves."

"I never knew he had them," said his companion.

"He hasn't," said the sympathizer. "They're his wife's."

# A Brighter Christmas on the Farm With DELCO-LIGHT

Bring greater happiness into the lives of everybody on the farm by making a Delco-Light Electric Light and Power Plant your family Christmas present.

There isn't anything that would give greater pleasure and comfort. There isn't anything that would so lighten the daily burdens and make every day on the farm happier. And just think how the family will enjoy the cozy rooms flooded with bright, clear, and steady Delco-Light.

Remember, too, Delco-Light will bring a happiness that extends far beyond Christmas day, for Delco-Light will be constantly on hand to provide brilliant, safe light, running water wherever you need it, power to run the separator and tumble the churn, and help in so many other ways.

And the new big price reduction and the time payment plan make it easy for you to get Delco-Light *now*—to place your order *today* to insure delivery in time for Christmas.

Put Delco-Light in your Home for Christmas

DELCO-LIGHT COMPANY, DAYTON, OHIO
*Subsidiary of General Motors Corporation*

## HINTS FROM HOUSEKEEPERS

### Salt Rising Bread

Answering query in a recent paper: Start the bread early in the morning. First scald the vessel in which you wish to make it. Take one-third quart of warm water, as warm as the finger can be held in. To this add teaspoon of salt, a pinch of sugar and cornmeal enough to make a batter the consistency of griddle cakes. Set the vessel containing this mixture in a closed vessel half full of moderately hot water, but not scalding. Keep temperature as nearly even as possible and add a teaspoon of flour once or twice during the fermentation. This ought to be very light in about five hours. Sift your flour into a pan, make an opening in the center and pour in your yeast or "rising." Have ready a pitcher of warm milk, salted and not too hot, or you will scald your yeast germs, and stir rapidly into a pulpy mass with a spoon. Cover this sponge closely and keep warm for an hour, then knead into loaves, adding flour to make the proper consistency. Place in warm, well greased pans, cover closely and leave till it is light. Bake in steady oven and when done let all the hot steam escape. Wrap closely in damp towels and keep in closed earthen jar until wanted. This is the recipe for salt rising bread given me by my dear old grandmother. —Mrs. Lilly Robertson, Kerman.

### His Right of Way

I am much interested in the poetry you have been printing from time to time. There are so many automobile accidents these days, I think it very appropriate if you would print the following verse:

There was a man named William Clay
Who died maintaining his right of way.
He was right, dead right, as he sped along,
But now he's as dead as if he'd been wrong.
—Subscriber, Niles.

### Real New England Beans and Brown Bread

I have enjoyed the recipes in the Cultivator very much but was sorry to see that recipe for Boston baked beans in the Cultivator of November 18 and want to send the real New England rule. I was brought up in Maine and Massachusetts and we always had beans and brown bread Saturday night.

Boston Baked Beans—Three large cups beans, soak all night in lots of water (2 quarts), in the morning bring to boil and add one-quarter teaspoon soda, boil five minutes, drain and add fresh water and boil until they feel soft when you pinch one, then drain and put in bean pot or deep dish, add 2 teaspoons salt, ¼ teaspoon pepper, 1 heaped tablespoon sugar, same of light New Orleans molasses, ½ pound salt pork. Nearly cover with water, put in oven and bake slowly all day, adding water as it boils away. If you do not want fire all day bake two forenoons as it is the long slow baking that gives the real flavor.

Boston Brown Bread—Two cups yellow corn meal, one cup flour, one cup light New Orleans molasses (scant), three cups sour or buttermilk, 1 teaspoon soda, 1 teaspoon salt. Steam about three hours.—A New Englander.

## HOUSEHOLD QUERIES

### Keeping Butter

Please print proper way to put down butter for future use.—Subscriber, Willits.

It will keep well if dry salt is worked into it or if packed in brine. Use fresh sweet butter, weigh carefullly and for each 10 pounds butter take 1 pound salt and work in thoroughly. Pack tightly in crocks and cover with salt. Store in cold place. When butter is to be used it may be freshened by working in cold water.

If brine is used: To each 10 pounds butter add ½ pound salt and work in thoroughly. Make brine of 3½ pounds salt per gallon water. Pack butter in this brine so that it will be well covered and store in cool place. It may be freshened as above.

One of our subscribers at Anaheim tells how her mother "puts down" butter, using sugar and saltpeter: "First of all, work butter and salt it and set away until the next day or even the next, then put in the sugar and saltpeter, about as much as will lie on the point of a knife, or a small pinch with your fingers to about three pounds of butter; work it well and pour off all the water that comes out when you work it. That is what keeps it. Then put a clean cloth over it and put a layer of salt on top.

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, W. V. Johnson, 31 N. Fifth Street, Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

## GETTING READY FOR CHRISTMAS

A BOX of good homemade candy is an attractive gift at any season of the year, and it is particularly timely at Christmas. But even the best of homemade candy loses its distinction when it is put into a more or less shelf worn box, bearing the name of some well known confectioner. If, however, the box itself is handmade also, there is harmony and satisfaction all around.

The covering of old candy boxes is a simple matter. Every wallpaper merchant generally has an out-of-date book of samples and will be glad to give away the whole book, or as many of its pages as may be required. These make excellent coverings for boxes, if they are selected carefully. The dresden papers with their tiny bunches of flowers, or the papers with small stripes, in the lighter, daintier colors, or just plain papers in these shades make ideal box coverings.

To do the actual covering, rip off the loose paper covering of the old box, using a knife or blade of scissors. Sometimes the paper is pasted tightly down, and then it may be simply let alone and the new cover applied over it.

The best boxes for covering are those having covers reaching down over and completely covering the sides of the box. It is not necessary to do anything to the inside half of this box, and it may be simply laid aside until the top is finished.

Cut a piece of wallpaper large enough to cover the entire outside, and leave a half-inch margin to paste down on the inside of the box. The bunch of flowers or principal stripe should be planned to come in the middle of the top.

The pasting may be done with library paste, or with flour paste made by mixing flour with cold water, and boiling, adding a wee bit of sugar. The white of an egg is fairly good. Mucilage or glue should not be used, as it is apt to show through the paper.

Placing the cover, top down, on the wrong side of the paper, hold the paper up against the sides of the cover, and with the scissors cut through the half-inch margin in a vertical line which meets the corners of the box. Moisten the edges of these side pieces, and paste them down against the inside of the cover. Then fold the ends of the paper against the ends of the box. This will leave a flap like that of an envelope at each end of the box, and one edge of this flap may have to be cut off to make its edges even, and to make the seam where the two edges are pasted down come under the flap. The end margin should then be pasted down, and the flap pasted over it. The matter is in reality very simple, as a little experimenting will show.

When the box has a cover which reaches only half way down its sides, a strip of paper must be pasted along the lower edge of the bottom part of the box, to meet the cover.

Following are some good recipes for sweets to put in these homemade boxes:

### Stuffed Dates

Carefully pick over a half pound of dates, selecting the most perfect ones, and split them with a knife, taking out the pit. In place of this pit insert one walnut or almond kernel. Roll the date in a saucer of granulated sugar, and place it in the box which has been lined with wax paper.

### Fudge

The trouble with most fudge failures is too much sugar and too rapid cooking. The surest recipe for fudge is the following: Two scant cups sugar, one full cup milk, one-half small square bitter chocolate, one level tablespoon butter, a pinch of salt.

Put the sugar, milk and salt on over a slow fire. Shave in the chocolate with a knife. Do not add the butter until the candy has boiled for some minutes. To test drop half teaspoon into a cup of cold water, and when it forms a soft ball that can be taken out of the water, it is done. A cup of chopped nuts may now be added if desired.

Lift the stewpan off the stove, and set it into a dishpan of cold water, being careful that the water is not so high in the pan as to splash into the fudge. Then stir until it begins to harden, scrape out on a buttered platter, and pat flat with your hands. Fudge that cooks slowly and cools quickly is sure to be creamy. Just before it is hard it should be cut into inch squares and put on a plate until quite cool. Then it may be put in the box.

### Divinity

Two cups sugar, one-half cup water, one-half cup corn syrup, one egg white, one-half teaspoon salt.

Put all the ingredients except the egg together and cook until it forms a soft ball in the water. Have the white of the egg beaten stiff on a platter, and pour the candy slowly into it, beating all the time. When well beaten up add, if desired, a cup of chopped nut meats. When it begins to harden spread it out on a sheet of clean brown wrapping paper. Cut into squares and let cool.

These dry candies are better for packing into boxes than the taffy or molasses candies, which are apt to grow sticky after a day or two.

### Candied Coconut

Boil a large cup of light brown sugar with a half cup of water, till a little dropped in cold water will harden at once. Pour in a cup of shredded coconut and half teaspoon of lemon extract. Beat slightly and turn quickly into a well buttered plate. Cut into sections as soon as it is set.

### Nut Brittle

Spread a large cup of broken English walnut meats and whole almonds and filberts on a buttered plate. Place two cups of granulated sugar in a pan to melt slowly without water. Let it bubble up till a golden brown color, and pour quickly and evenly over the nut meats. Break into irregular pieces when cold.

### Sugared Walnuts

Blanch a cup of English walnut meats by pouring over them boiling water, then throwing quickly into cold water and rubbing off the skins. Spread out the meats to dry. Boil half cup of sugar with a third of a cup of water till it threads well when dropped from a fork. Remove from the fire, beat till slightly milky, pour in the walnut meats and stir and toss till each meat is coated.

### Pecan Sugar Caramel

Melt without water over a slow fire quarter cup sugar till it bubbles up brown. Add two tablespoons water and let cook a while longer. Add this to a large cup of granulated sugar and a third of a cup of water. Boil till it threads well. Take from the fire and stir in a half cup pecan meats. Stir a very short time and pour quickly onto a buttered plate. Cut while still hot.

### Hickory Nut Ball

Run a cup of hickory nut meats through the food chopper. Mix with the whites of two eggs, a teaspoon of vanilla and enough powdered sugar

Stiff?

GOMBAULT'S Balsam gives prompt relief for sprains, rheumatism, bruises, cuts and sores. At your druggist's or by parcel post upon receipt of price, $1.50 per bottle. The Lawrence-Williams Co., Cleveland, Ohio

GOMBAULT'S BALSAM
*The Imported Liniment*
HEALING *and* ANTISEPTIC

(previously rolled, if lumpy) to make a very stiff paste. Make into small balls; roll in coarse sugar and dry on buttered plates.

### Taffy

Vanilla—Two cups sugar, 2 pound can white Karo or 2½ cups Karo, ¼ cup vinegar, 1 tablespoon butter, ⅛ teaspoon soda, 2 teaspoons vanilla.

Strawberry—Same as above—flavor with strawberry, color with liquid rose. Lemon—Same as above—flavor with lemon (oil) and color yellow. Chocolate—Bitter chocolate on slab. Molasses—Same, add ½ cup molasses. 240 degrees Fahrenheit.

Method: Mix sugar and syrup and boil until it commences to thicken, then add vinegar. When nearly done add butter and soda. Cook until brittle when dropped in water or 268. Pour on oiled slab. Flavor and color on slab. Pull.

### Peppermint Chews

Two cups sugar, 2 cups syrup, 4 tablespoons butter. Place sugar and syrup in kettle, when nearly done (hard ball or 258) add butter. Pour on oiled slab. When cool take out small portion for striping, add bitter chocolate to this. Flavor balance with peppermint. Use oils for flavoring whenever possible.

### Lemon Gum Drops

Three tablespoons Jell-O, ¾ cups sugar, ¼ cup corn syrup, 3 tablespoons lemon juice, ½ cup cold water. Soften the Jello-O in one-half cup of cold water. Add the corn syrup to the sugar in a saucepan, and boil until the mixture will form a soft ball when dropped in cold water. Add the softened Jello-O and lemon juice, cook for a moment longer, remove from fire, strain and let stand to cool for five minutes. Sift corn starch to the depth of one and a half inch into a pan and with the handle of a knife, or the molds which come for the purpose, make impressions in the cornstarch. Into these pour the Jello-O mixture and allow to harden. When firm shake off corn starch, and after softening drops slightly over a steaming-kettle, roll them in granulated sugar.

## CANDIED BERRIES AND PEEL FOR CHRISTMAS GIFT JARS

Unusual homemade confections are always an ideal Christmas remembrance when one does not wish to spend very much money. The little jars with screwed on lids in which salad dressing is often sold make admirable containers for gifts of this kind if they are decorated with bright-colored splashes of enamel paint or simple designs in black.

Candied cranberries are easily made. The United States department of agriculture recommends the following way of preparing them:

### Candied Cranberries

Three cups of large cranberries, two cups sugar, 2 cups water.

Select large, firm cranberries. Make three small slits, each one-eighth inch long, in each berry with the point of a penknife. Boil the sugar and water together until clear. Allow this syrup to cool, add the berries and bring very slowly to the boiling point. The saucepan should be large enough to permit all the berries to float at the top of the syrup during cooking. If the berries are heated too quickly, the skins will burst before the syrup soaks into the pulp. As soon as the syrup boils, take the dish off the stove and let it stand over night.

Next day drain the syrup from the berries and reduce it to about half its original volume by boiling. Cool the syrup, place the berries in it, heat again slowly; boil very gently for heat again slowly; boil very gently for three or four minutes, and allow to stand for two hours or more. Then boil gently a third time for five minutes. Allow the berries to stand in the thick syrup over night; warm once more, so that the syrup will be thin enough to pour easily, and drain the berries from the syrup. Spread them on a clean cloth or oiled paper to dry. When dry, the berries should be bright, firm, plump and semi-transparent.

Jellied peel is another delicious confection which can be made from materials available practically everywhere. Either grapefruit, orange, or lemon peel may be used.

### Jellied Peel

Five ounces peel cut in thin strips one-quarter inch wide (grapefruit, orange, or lemon).

One cup sugar for syrup, two-thirds cup water for syrup, one-quarter teaspoon salt, one-quarter cup sugar for rolling strips.

Use strips of thick soft peel free from blemishes from bright colored, heavy, smooth skinned grapefruit, lemons or oranges. Add one quart of cold water, boil for one-half hour. Repeat this process until the strips have been parboiled three times, discarding the water after each cooking. The strips should then be tender.

Dissolve the sugar in the water for the syrup, in a small saucepan, add the strips of grapefruit or orange peel, and cook rapidly for about 20 minutes, then place an asbestos mat under the pan, and continue the boiling about 20 minutes longer, or until the syrup is all absorbed by the peel. Great care must be taken at this point that the syrup does not scorch, and the strips of peel must be turned frequently. Use a fork in turning the strips and in removing them from the pan.

Place the peel on waxed paper until cool, and, using the flat side of a knife, roll the strips in granulated sugar. Let the strips dry out for an hour or two, then wrap in waxed paper, and keep in tightly covered tin containers until used. This confection should keep in good condition for two or three weeks, if stored in a moderately cool place.

When larger quantities of peel are jellied, the process is slightly changed as follows: If twice this quantity of jellied peel is made at one time, double the quantities of all ingredients used, and cook the strips about 20 minutes longer, in order that all the syrup may be absorbed; i. e., the time of cooking the strips in the syrup is 60 instead of 40 minutes.

If four times the original quantity is made, use four times as much peel and sugar, but in parboiling the peel use only enough water to cover it well. In making the syrup, use four cups of sugar but only 1¼ cups of water; it will then be necessary to cook the strips in the syrup for only about 60 minutes, just as when doubling the recipe. Thus the "boiling down" process becomes less tedious.

Candied cranberries and jellied peel may both be used effectively for decorating Christmas cakes and cookies in place of cherries, citron, angelica, etc. Those who have preserved watermelon rind on hand may like to tint it green with harmless vegetable coloring, flavor it with a few drops of peppermint, and use it in combination with the red of the cranberries and the yellow jellied peel. Or the jellied peel may be colored with harmless vegetable coloring by adding a small quantity of coloring to the last water in which the peel is parboiled.

Dates stuffed with strips of grapefruit peel instead of with peanuts or almonds are interesting and new. When the date pit has been replaced by a strip of the peel, the date is closed and rolled in granulated sugar.

## TRY IT

Weary Willie slouched into the pawn shop.

"How much will you give me for this overcoat?" he asked, producing a faded but neatly mended garment.

Isaac looked at it critically.

"Four dollars," he said.

"Why," cried Willie, "that coat's worth ten dollars if it's worth a penny!"

"I wouldn't give you ten dollars for two like that," sniffed Isaac. "Four dollars or nothing."

"Are you sure that's all it's worth?" asked Weary Willie.

"Four dollars," repeated Isaac.

"Well, here's your four dollars," said Weary Willie. "This overcoat was hangin' outside yer shop, and I was wonderin' how much it was really worth."—Los Angeles Times.

**Have a Quick-Lite in Your Home this Christmas!**

**Here's An Economical Gift** No Christmas gift will bring greater cheer and happiness than a Coleman Quick-Lite Lamp. And you'll find it such a practical, economical and beautiful gift! It will delight and benefit every member of your family—at a cost of only about a penny a night! Mother, "Dad" and the kiddies will enjoy its wonderful 300 candle power brilliance. Not only at Christmas time, but throughout the coming years, the soft sun-like brilliance will protect your eyes—and keep strong and young the eyes of your loved ones—the children. As an extra gift for "Son" or "Dad"—get a Quick-Lite Lantern!

**Use This Lamp 10 Evenings** Write today for our Special "10-Day Visit" Plan. This liberal plan puts the Quick-Lite on your table to add immeasurable radiance and cheer to the holiday season. Send the attached Coupon. Simply mention the name of your nearest hardware store or general merchant. Make this Christmas your happiest one. Send Coupon--*Now*

**THE COLEMAN LAMP CO.**

Desk CA-81 · Los Angeles, Calif.

**Two Lights Needed in Every Home!**

*The Quick-Lite Lamp*

—is 300 candle power—20 times brighter than an old-style oil lamp at one-third the cost.

—is easy to keep clean—no wicks to trim, no dirty chimneys to wash, no soot, no smoke, no dripping oil.

—can be used all over the house.

—is economical—gives over 40 hours brilliant service per gallon of fuel used.

—is beautiful—handsomely designed and elegantly finished.

*The Quick-Light Lantern*

—is built to operate just like the Quick-Lite Lamp—gives same 300 candle power brilliancy.

—is just the thing for night hauling, harvesting, ditching, road grading, camping, fishing, hunting, auto-touring, etc.

—won't blow out in the wildest storm.

**Coleman Quick-Lite**

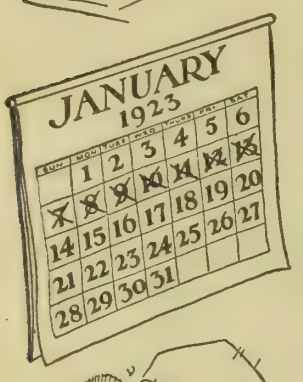
# Prove it —this way



Don't take anyone's word for it that KOW-KARE definitely increases the milk yield. Actual proof is too easy to secure.

Make a simple test — and make it now, so that you may benefit all winter and spring by what it proves. Select a part of your herd — even one cow — and place in her feed morning and evening, for just one week out of the month, a tablespoonful of KOW-KARE. If you keep accurate production records, you will be surprised at the increased yield, and at the surprisingly low cost of the treatment.

The reason is simple. The vigor of the cow's digestive and milk-making organs "runs down" during the winter months when green pasturage is not available. KOW KARE has the medicinal properties to keep these organs toned up and working at summer capacity.

It is just this building-up of the genital and digestive functions that makes KOW KARE so valuable in treating the diseases which originate in these very organs, such as *Abortion, Retained Afterbirth, Barrenness, Scours, Bunches, Milk Fever,* etc. No medicine shelf is complete without this nationally-used cow remedy.

KOW KARE is sold by feed dealers, druggists, general stores; large size $1.25; medium size 65c. If your dealer is not supplied, we will send postpaid Our valuable book, "*The Home Cow Doctor.*" free.

**Dairy Association Co., Inc., Lyndonville, Vt.**

## You Should Not Buy a Bull Unless:

You have seen his dam and know that she is the type you want his daughters to be.
Or you have seen a good picture of her with a close-up picture of her udder.
She is a big producer of milk with a high percentage of fat.
Our cows are the tops of all the big sales in the state for the past three years.
Practically all of them have high 7 day and yearly records. They hold 4 world's records.
Our herd bull is **Aaggie De Kol Mead,** whose five nearest dams average 1130.66 pounds of butter in a year testing over 4%.
You should have one of his sons out of a high record dam.
Call or write for our long-time, easy payment plan.

**Lankershim, Cal.** *Fred Hartsook* RANCH **Visitors Always Welcome**

## LONGYEAR RANCH HEREFORDS

BRED FOR RANGE PURPOSES

**SELECTED BREEDING STOCK**

This herd originated from registered cows of first Hereford quality. Standard has been maintained with registered bulls of superior type for over 35 years.

**MOUNTAIN BRED AND RAISED**

These cattle all range at 4000 to 10,000 feet elevation the year round with green feed nine months in the year making large rugged cattle of the true Hereford type.

**BREEDING GUARANTEED**

Range bulls, heifers and cows. For more particulars address

# The Scrub Bull is Dead

By C. B. Messenger

THE scrub bull is dead. Unfortunately we cannot say: "All scrub bulls are dead." Also, unfortunately, we cannot say: "The worst of the scrub bulls are dead," for we take it that in some points at least the one whose funeral oration is given below was, as scrub bulls go, a fairly good animal. But his performance was not satisfactory so the question of his being really worth while in this world was passed up to a jury of 12 "good men and true." We are a bit afraid the jury, which was composed of farm bureau men, was a bit prejudiced against the defendant, but there is one satisfaction in that they reached a verdict.

It all happened at the recent dairy show at Fresno. The bull was not a purebred, in other words it was a "scrub." He had not succeeded in raising the producing quality of the dairy herds of Fresno and Kings Counties so he was brought to trial. He appeared in person on the great platform on the auditorium and looked with wondering eyes at the "court," "jury," "lawyers," and "spectators." He was prosecuted by Farm Adviser Hayes of Fresno and defended by Farm Adviser Sullivan of Kings County. The prosecutor charged that the bull was worthy of death because of his inability to produce efficiency in dairy herds, with various and sundry other charges. He proved his case by two witnesses. "Lawyer" Sullivan introduced no witnesses but trusted in his eloquence with the "jury." The strongest point he made in defense of the bull was that he was cheap. The farmer with small means could buy him, while if he borrowed money and purchased a purebred he would have so much invested that he could not afford to "beat up" the bull. "Dairymen are temperamental and occasionally have to relieve themselves by beating up somebody." "A high priced bull would make expensive beating, so naturally the dairyman would turn to his wife." This caused profuse weeping on the part of the jury. However, they soon retired and brought in a unanimous verdict: "Guilty as charged." The court pronounced death sentence and later Sam H. Greene of the Dairy Council pronounced the oration. His success was such that the populace with one acclaim did say: "If Shakespeare did not write his plays it was certainly not done by Francis Bacon but by Sam Greene."

THE BURIAL OF TAURUS, SCRUB BULL

By Sam H. Greene, Secretary-Manager, California Dairy Council

(With Apologies to the Shade of Wm. Shakespeare)

Friends, Farmers, Dairymen, lend me your Ears!
I come to bury this here scrub, Taurus.
Not to praise him.
The evil that men do lives after them:
The good is oft interred with their bones.
So it is with this miserable beast
Whose ignominious end
We here are congregated to celebrate.
The evil done by this poor, nameless scrub
Will live to the dying day of the last
Low producing daughter for whose existence
He is responsible.
The only good he can do is to die.
That his putrid carcass may be used as fertilizer,
Or to increase the general supply of soap grease!
For a short space of years he reigned as king.
But he was not ambitious. It was a grievous fault,
And grievously shall he answer for it.
He hath brought numerous progeny into the world
Whose lacteal product did the general want fill,
But only at great cost
And insufficient labor to their owners.
Time was when men did hold Taurus of great value
And of his qualities did tell with pride.
I speak not to disprove what those men spoke,
But here I am to speak what I know.
You all did love him once, though without cause.
What cause doth justify you now to mourn for him?
But yesterday the fame of Taurus
Might have stood against the world!
Now he lies here,
And none so poor to do him reverence
O masters! if I were disposed to stir
Your hearts and minds to mutiny and rage,
I should hold you here spellbound
With stories of his cursed wrongs!
Good friends, sweet friends, let me not stir you up
To such a sudden flood of mutiny.
They that have used such bulls are honorable men.
What private griefs they had,
I know not that made them do it;
But certain it is that those men,
Though honorable, yet were not wise.
If you have tears, prepare to shed them now,
The while I tell you of
His crimes and misdemeanors.
I am no orator;
But, as you know me all, a plain, blunt man;
And I have neither wit, nor words, nor worth;
Action, nor utterance, nor power
Of speech to stir men's blood.
I only speak right on!
I tell you that which you yourselves do know.
I show you Taurus' lack of points
(Poor, poor, dumb mouths),
And bid them speak for me:
Observe his sullen mien.
Take note his crooked back and broken rump;
Slab sided ribs and narrow chest:
His dull, dead eye, his rough and homely coat.
O my masters! can there be men
Who yet believe that such a beast
Is fit to raise up dairy herds
For good Americans!!
Away with him!
Let us look upon his like no more!
And here today make high resolve
That we will rid the fields and
The fair hills and valleys of California
Of his detested kind forever!
Here was a scrub,
Representative of a thousand others.
We'll burn his body in the market place.
And, with the brands, fire the funeral pyres
Of hundreds like him.
Now let it work.
Knowledge thou art afoot:
Take what course thou wilt!

# New High Producing Cow Again a Holstein

Kolrain Marion Finderne, a Holstein cow owned by Loeb Farms, Charlevoix, Michigan, is the new high record cow for the entire world outside of the state of Washington, having just completed her test with a record of 35,339.5 pounds milk containing 1,022.85 pounds butter fat equivalent to 1,278.56 pounds

New Champion East of the Rockies
Holstein-Friesian cow, Kolrain Marion Finderne, owned by Loeb Farms, Michigan, produced 35,339.5 pounds milk in one year.

butter in 365 days. She stands second only to the Washington Holstein, Segis Piertje Prospect who produced 37,381.4 pounds milk in one year. Previous to making her recent great record the Loeb cow at four years of age produced 1,036.3 pounds butter from 28,851.8 pounds milk. Following the making of this exceptional record she proceeded with but two weeks rest on the next yearly test which brought forth her recent 35,000 pound record. She is the champion cow of Michigan for all ages in both milk and butter production and is Michigan's second cow to produce over 30,000 pounds milk, as well as the second cow in that state with two year records above 1000 pounds butter.

### O'CONNOR OPENS NEW AUCTION PAVILION

C. H. O'Connor and Son of Los Angeles, who have built up a big business in that city and in the surrounding country in sales of real estate by auction, opened a new pavilion for livestock sales at Hynes on November 28, with a barbecue and a band concert as incidentals to a sale of dairy cows for William Thompson.

The new plant is the last word in equipment for dairy sales, having separate accommodations for clean cattle removed from the regular run of sales stock, up-to-date milking barns and extensive yard space. Roy Rule, a well known livestock auctioneer, does most of the selling with occasional help from the head of the firm.

A big crowd packed the grounds on the opening day and the offering of cattle was very excellent and sold quickly and well. The average for the sale was about $200.

This firm has been doing some selling of livestock while getting ready for their own plant and has had very good success. The main office is in the Pantages Theater Building in Los Angeles.

### STEER FEEDING COMBINATIONS

Feeding tests at the Colorado experiment station have shown up some good steer feeding combinations. These rations in order of their economic importance, are as follows:

No. 1—Wet pulp, 80-100 pounds; beet molasses, 2-4 pounds; cottonseed cake, 1-3 pounds; alfalfa, 8-12 pounds.

No. 2—Corn silage, 25 pounds; dried molasses beet pulp, 8-10 pounds; cottonseed cake, 1-3 pounds; alfalfa, 8-12 pounds.

No. 3—Corn silage, 25 pounds; beet molasses, 2-4 pounds; barley, 6-8 pounds; alfalfa, 10-14 pounds.

No. 4—Corn silage, 25 pounds; barley, 8-10 pounds; alfalfa, 10-14 pounds.

No. 5—Corn, 5 pounds; dried molasses beet pulp, 5 pounds; alfalfa, 12-14 pounds.

Where wet pulp is available the above combination with other feeds has proved most satisfactory. Cottonseed cake even at $55 per ton, will give better returns fed with wet pulp and molasses, than will corn or dried molasses beet pulp. Dried molasses beet pulp is equal to corn when fed with corn or corn silage, but when fed as the only grain in the ration has a lower feeding value than other grains and will not give satisfactory returns.

Beet molasses is, next to wet pulp, the cheapest cattle feed. It can be fed mixed with the grain or on the hay.

Rather than to feed straight corn and alfalfa, it is advisable to combine dried molasses beet pulp with the corn in a half and half mixture. The price of corn can be paid for the dried molasses beet pulp and better results will be secured than with straight corn.—E. J. Maynard, Colorado Experiment Station.

### FEEDING DAIRY COWS

A balanced ration for a dairy cow is entirely different from that of a fat steer because their requirements are different. There are three groups of compounds in all foodstuffs that must be considered in making a mixture of feeds. They are known as protein, carbohydrates and fat. Protein includes those compounds containing nitrogen which enter into the composition of muscle, hair, skin, blood, milk, etc. It is impossible to develop a young animal properly without a sufficient amount of protein. A cow cannot produce all the milk she is capable of producing unless she has a sufficient amount of protein. Alfalfa, clover, peas, oats and bran are especially valuable to the dairyman because they contain a large amount of protein. Cows that receive only timothy hay, corn fodder, beet pulp, roots, corn and barley do not produce to their capacity because they are not getting enough protein. No other substance can take the place of protein as a milk producer and a tissue builder. In addition to these uses, it also furnishes heat and energy to the body and may be changed into fat.

Carbohydrates include the fiber, the starch and the sugar of the feeds. They also, as well as protein, provide the body with fat, heat and energy. The fats in the food produce heat, energy and fat in the body. Linseed and cottonseed oils are examples of plant fats. One pound of fat produces about 2.2 times as much heat as 1 pound of protein or of carbohydrates. Only part of the protein, carbohydrates and fat given in the food can be digested and used by the body, the rest passing away in the excrement. Only the digested compounds benefit the animal. The non-digestible compounds that pass away in the excrement have no value. Non-digestible fiber has no value and an excess of it is an injury to a cow, as energy is required to get rid of it. This is particularly true of straw and shows why straw should not form a large part of the ration. If a cow eats 100 pounds of clover hay, she digests 7.1 pounds of protein, 37.8 pounds of carbohydrates and 1.8 pounds of fat; 53.3 pounds passes from the body and is of no value as food. A large portion of the nutritive compounds are soluble in water and when hay or other foods are wet by rains or improperly cured their food value is decreased.

Special attention should be given by the dairyman to the preparation and combination of his feeds and especially to the curing of his forage. When giving a large flow of milk on dry feed, cows generally require considerable grain to maintain the milk yield. The amount of grain given with the ration should be gauged by the milk flow. A good rule is to give 1 pound of grain per day to every 3 or 4 pounds of milk produced per day or give as many pounds of grain per day as pounds of butter fat produced per week.—Colorado Agricultural College.

### FAR, FAR AWAY

A Kentucky lad's enlistment in the navy expired. A friend gob asked him what he thought of the sea.

"Just this much," he said, "I'm going to put an oar over my shoulder and walk inland—and I'm going to keep walking and walking and walking until someone stops me and asks, 'What's that thing you've got over your shoulder?' then I'm going to settle right down there until I D-I-E."

When you stand up for yourself others may be prevented from sitting down on you.

# SOUTHWEST STATE BANK

Is now established at the Los Angeles Union Stock Yards and is in position to do a general live stock financing and banking business. Affiliated with this bank is the SOUTHWEST CATTLE LOAN COMPANY of Los Angeles. Address

*Administration Building*

**Los Angeles Union Stockyards**

The officers of these two institutions are thoroughly experienced in the PRODUCING, GROWING, FINANCING, FEEDING and MARKETING of live stock in the West and Central West. Therefore, they are in a position to render valuable advice and service to the stock producers tributary to the Los Angeles Market.

# Around the Ranges

By A. L. Spellmeyer

THIS is written in the first part of December, at the time of the lowest Southwestern feeder and stocker cattle prices for light catttle we have known in more than ten years. It is written during a month in which fat hogs locally declined from 11 cents to 9 cents, and when lambs have shown an advance from 12 cents to 13.75. It is written during a period of range clean up caused by short winter feed, high priced hay, or money need, and before California has the lush grass that makes men itch to get stock to graze it.

The range unrest, the farm unrest, and the entire national feeling in agricultural circles has been recently reflected in political developments at the nation's capital. The will to take and the lack of the will to give a little also is forcing through the nation a group agrarian solidity of caste action that may bring momentous changes in the methods of food marketing in this nation.

Right or wrong as it may be oil companies and others pay tremendous dividends that are subject to no income tax. The government is digging back four and five years to make some farmer or livestock man pay additional taxes for those periods. The war finance has helped some men through their banks but directly, as thousands of men will testify, it is a great disappointment and does not do more than stimulate the paper already held in the banks, for the bank has to back every loan, and the red tape is distasteful, especially to the range producer, who even prefers the 9 per cent and expense bond method or borrowing. The joint land stock banks advertised as a panacea are either inactive or creaming a few loans. No general wide effort exists to help actual production or small individual men who comprise the bulk production. Men in livestock production are hard up, with unpaid notes, and with drouth, low markets, a multiplicity of troubles and involvements that have come to them. They would pay all they can, but many for the first time in long hard working years have been unable to keep their written words. The court calendars are crowded with note suits, foreclosures and transfers, the lawyers are busy, and the banks are using in most instances a lenient policy where good intention exists.

In parts of New Mexico and Texas and a corner of Arizona drouth has added its burden. The calf crop of New Mexico was probably not over 10 per cent this year and the lamb crop small. The calf crop in Arizona was small. Last winter California lost many cattle, but this year a great promise of the best in seven years is with us and for the south here winter grass by Christmas is already certain, with lush green feed everywhere by January sure unless a freeze comes to the north.

Snows have tied things up in the cold range districts, and the car shortage which complicated things for the livestock men in the west has cleared up. The sacrifice run is almost over, with the California grass men in a vast majority not availing themselves of the cheapest cattle in feeders and stockers they have known for a long time.

Some 75,000 cattle are being partially fed around the Phoenix, Arizona, district but these are not altogether beef stock, and some 40,000, mostly beef stock, are being fed in the Imperial district. There is in the north a comparative shortage of heavy cattle on feed from all reports.

In the sheep line the conditions are exactly opposite, for lamb and ewe and wool prices have been high and steadily advancing. The bulk of the feeder 60 pound lambs were contracted f. o. b. on an average of ten with 11.50 for some and nine for a very few. A half million of these lambs are today being fed up around the Ft. Collins, Colorado, vicinity, that stand 12 cents or better delivered there. I am informed they can't be fed this year for less than a three cent spread so a 15 to 16 cent winter fed lamb price must arrive or many will lose a lot of money. I have heard bets that Los Angeles lambs will reach 15 cents before February and others say lambs are due for a decline. Wool is around the 50 cent mark and strong. A lamb pelt today is worth more than the lamb was during the sheep decline two years ago. Hides are up, and a good packer hide probably brings now $8. The offal and hide of a good steer will go from $12 to $15, yet I have seen many yearling steers net only a trifle more than that price which were sold in the last month.

Within 700 miles of Los Angeles in various directions a probable total of 200,000 lambs are being fed, part of which are in Imperial Valley, a few elsewhere in California, some in Arizona and some in Utah.

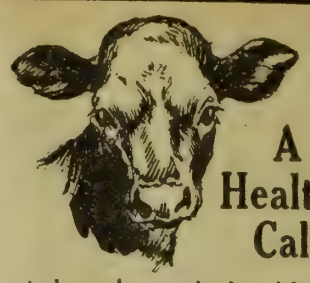
These fed lambs must start moving soon and keep it up to complete absorption by the time the early California, Arizona and Tennessee lambs start coming from the grass in May and June. A number of old ewes are being fed, but the bulk of the ewe lambs have been held to fill up depleted flocks. Range price for a good ewe figure today $12 per head with an extra $3 to $5 for the grazing right in leased land or permits. There are some who say 3,000,000 lambs are being fed in the United States and others put it at 5,000,000.

The yearly national slaughter in total sheep exceeds 18,000,000 usually, but this year may show a decline when we secure the figures. However the census number shows an inadequate sheep supply, hence a virtual state of real or fancied shortage exists that has boomed the sheep business almost to war time prices. As the fed lambs virtually supply lamb needs for a four months period only there is cause for question as to the permanence of prices based upon a 15 to 16 cent lamb, which price will mean 32 cent carcass lamb as against the present low price of 10 to 14 cent carcass beef. The packers are reputed heavy backers of lamb feeding, so there will be that also to consider.

In cattle one can hear almost anything. The demand and premium has been locally paid for heavy northern cattle. Contracts are rumored offered at 8.50 and even higher for winter beef that will fat out at 1100 to 1200 pounds good quality steers. At the same time feed is so high there is nothing in feeding a light steer at 5.50, though there is every prospect of a big profit from California grass this year on that 5.50 to 6 cent thin feeder. No feed on earth equals in quick weight gain the alfilaria, bur clover, etc. of California. In a short season flesh to start is necessary or the steer doesn't finish, but not in the kind of a year promised to us by the conditions of rain and growth we have had this fall. In six weeks of good green feed a strong steer will equal many a fleshy feeder, and if that animal gets three months more of lush green feed and one of dry, our grass product can't be beat for fat beef. It's seven years since California has had the right kind of a year, so many of the newcomers don't know, and many of the old timers are either too hard up or depressed or pessimistic as to prices to fill up the depleted ranges.

A great many cattle have been coming into Utah to the market, and these have been forwarded to Los Angeles packers or to the stockyards. There are 4,000 head today in a local feed yard almost entirely from that north district, besides those reshipped to Imperial. Denver has shipped cattle south while drawing upon Arizona for young cattle to ship north. The Los Angeles County needs are about 7000 cattle and calves weekly for slaughter. The stockyards have received something over 3000 cattle weekly, part of which have been feeders. The killers have drawn a third to a half of Los Angeles County needs through the stockyards, with increasing patronage showing.

With a national kill that exceeds



A Healthy Calf
—is the result, not only of good feeding, but of **protection** against germ infections, such as scours.
Experience has taught the wise cattle man to rely upon a good safe disinfectant. A bottle of B-K is his helpful agent. When used internally it destroys germs, acts as an anti-acid and sweetens the stomach, heals inflamed membranes, relieves irritation, restores healthy action. B-K contains no poison, acid or oil and may be given freely in the milk and drinking water.
Never be without B-K—You will surely need it—and, it is always ready. Sold everywhere.

greatly the national calf crop for several years, beef needs have been supplied at the expense of breeding not yet in sight.

## Livestock News Notes

The Kern County cow testing association for the past month tested 900 cows with an average of 665 pounds milk and 28 pounds fat per cow. The best cow was owned by J. L. Sebastian of Wasco and produced 1947 pounds milk and 74 pounds fat. She is a registered Holstein. H. D. Grundt of Wasco had the high herd of over 15 and A. V. Bennett of Wasco was first with herd under 15.

Farmers Bulletin 1263 of the U. S. department of agriculture written by E. Z. Russell is a complete classification of the different breeds of swine with illustrations of typical animals of the leading breeds. It is very instructive and should be in the hands of all hog men. Write to the department at Washington for your copy.

The Southern Los Angeles County Testing Association turned out some good records last month. J. Van Ruiten owns the two high cows which made 100 and 79 pounds of fat respectively. The herd belonging to P. Dykzuel made the high average, which was 50.2 pounds.

Queen Carlotta De Kol, a Holstein-Friesian cow, owned by Brock and Jenks of Geneva, New York ,has just completed a yearly test with a new high record for the Eastern states. In 365 days she produced 34,430.3 pounds milk containing 1,012.42 pounds butter fat. This new record is exceeded only by the world's champion milk producer, Segis Pietertje Prospect and by Kolrain Marion Finderne. The day following the completion of this test period, her dam, Juna Price De Kol, finished her yearly test with well over 27,000 pounds milk. This record with that of her daughter averages close to 31,000 pounds milk, which has been beaten only once by a combination of daughter and mother. Kolrain Marion Finderne and her dam hold the world's record in this class. Their combined production is 31,167 pounds milk in one year.

With a total yearly production of 33,368.1 pounds milk containing 1,119.95 pounds butter fat equivalent to 1,399.93 pounds butter, Poplar Jewess De Kol, a Holstein owned by Wheatfield Farms Association, Inc. of La Salle, New York, is the second New York Holstein cow during the past month to produce over 33,000 pounds milk under semi-official test for 365 days. With this extraordinary record to her credit the Wheatfield cow ranks sixth among the world's leading cows of all breeds and ages for both milk and butterfat production.

### Drying Up Cow

Please tell me how to dry cow up. She has been milking ten months and will be fresh about February 1. She has been giving two gallons of milk per day until now. She is staked out in green barley during the day and given one flake of alfalfa at night with no concentrates.—Subscriber, San Gabriel.

Our best answer to this question is don't do it. If you have a good cow that will give a good flow of milk right up to the time she comes fresh don't risk spoiling her by forcing her to go dry. When the milk starts again the milk that was left in the udder may not have all absorbed and it may cause milk fever or inflammation of the udder and cause you all kinds of trouble and may ruin the cow. If the milk does not taste right just before she comes fresh throw it out and continue to do so for three or four days after she is fresh. Maybe she will not start off with such a rush of milk for the first week after calving as she would if she were dry, but she will more than make it up before the year is passed. Read what we tell the others also.

### Bloody Milk

I have a milch goat that gives bloody milk. The blood is well mixed with the milk so it is not noticeable before it settles most of the time. However at times the milk looks pink when drawn from the goat. Is there any remedy?—Subscriber, Selma.

Bloody milk is caused by so many different things that it is hard to prescribe for it without knowing the cause. It may be a bruise or inflamed udder or a microbe that gets in the milk. It would be safe to give salts in the feed. Mix one pound of epsom salts with half a pound of common salt and two ounces of ginger. Give a tablespoon of the mixture in the feed twice a day. Also get one ounce of the tincture of iron and give 10 or 15 drops in a little water once a day as a drench.

### Lumps in Udder

Our eight year old cow came fresh three weeks ago. At first the calf did not suck so I milked the cow. Later the calf started to suck the cow and I left it with the cow. After a few days I noticed lumps forming in the udder. They have grown until now they are the size of a turkey's egg and are in the hind quarter. The milk has been reduced about one-half. I have taken the calf away and am milking the cow. I massage the udder several times a day and use hot water and rub on a salve with no results. The cow is on good alfalfa pasture and gets good alfalfa hay and grain hay. Will she ever be as good as she was? What would you advise doing for her and what to feed her in the way of grain?—Subscriber, Orland.

Probably the calf did not take all the milk out of the udder. When the milk is started it should be all drawn out. We can only advise giving the old reliable remedy. Mix three pounds of epsom salts, two pounds of common salt and four ounces of ground ginger. Give a handful in the feed twice a day. It will thin the blood and help to carry off the refuse. Feed very little grain and be sure she gets plenty of water. When using hot water to bathe the udder it should be dried thoroughly. If allowed to dry by itself the evaporation will chill the parts and do more harm than the heat did good. If any benefit is derived by applying salve or ointment it is from the rubbing and not from the salve. The skin is too thick for anything to penetrate. Less salve and more rubbing is better. If you would wrap the udder with soft cotton and support it with strips of cloth over the back the warmth from it would do some good. When a calf is allowed to suck the cow it should be at regular intervals and when the calf has enough the cow should be milked out clean at that time. Twice or at most three times a day is enough for a calf to feed.

TRADE MARK SUPERIOR

# If their harness doesn't fit, your horses can't keep fit

"Superior Brand" Harness is fashioned to give the horse maximum comfort. It is scientifically designed so that the harness conforms with the anatomy and is rightly proportioned thruout. The Dealers who handle Superior Brand Harness will see that the harness you select fits your horse to a nicety. Ask the dealer nearest you to show you the different types and sets.

ACRES OF
DOLLARS
ARE WAITING FOR YOU

What crops will make you the most money? What enterprises? What methods? What plans will pay YOU on YOUR farm NOW—without adding to your machinery, acres or stock?

Should you stick to the things your neighbors are raising or go in for something new? Should you specialize on a few crops or diversify with many? Should you play *safe* or play *big?*

THE COUNTRY GENTLEMAN has found out for you. Harry R. O'Brien traveled 3200 miles to ask successful farmers. There's no wild theory in what he says—he has bank-balance proof for every line. It's honest, sound stuff.

One item, one bit of fact, may make the difference next year between *profit* and *no profit*. He gives you the secrets of success—things that you can begin applying tomorrow to make more money.

Literally, acres of dollars are waiting for you if you go after them right. The right way is in this series—in the articles that appear in the next thirteen big issues.

**The Truth About MUSCLE SHOALS**

The Muscle Shoals Project is of vital interest to every farmer.

Will it go through? Will it fail?

Will the great resources of Power be used to help the farmer?

Philip S. Rose knows the story from the inside. His illuminating article is one of a series of six in THE COUNTRY GENTLEMAN—on the Power Resources—water, coal and oil—of this country.

*This appears in the next 13 issues.*

**STRIKES!—**
**The Farmer *Always* Gets Stung**

The recent railroad and miners' strike is estimated to have cost the farmers in California alone $25,000,000.

How much did it cost YOU?

No matter who wins in a capital and labor fight, the farmer has to pay—and pay *big*. A series of vigorous articles on strikes from the farmer's point of view will appear *in the next 13 issues* of THE COUNTRY GENTLEMAN.

**13 ISSUES FOR ONLY 25 CENTS**

We will send you the next 13 issues of THE COUNTRY GENTLEMAN, containing these and many other important features, for only 25 cents.

THE COUNTRY GENTLEMAN is a practical "dirt" farmer's magazine.

It emphasizes the *business* end of farming. It shows you constantly in hundreds of different ways how you can make more money out of farming in your section of the country.

40 pages, each week, packed with meaty, sound *help*.

Mail this coupon with 25 cents—coin, check, money order or stamps—we take the risk.

Your first issue, mailed promptly, will be worth to you more than the whole amount.

*Only a quarter.* Mail it now while you are thinking about it.

# 4000 Barley

By R. A. Condee

DURING the summer of 1920 Professor G. W. Hendry of the division of agronomy at Davis university farm, sent the California Junior Republic vocational high school a small sample of Mariout and Four Thousand seed barley.

In the fall of that year the students in the farm group of the Republic planted these samples under the row method in small beds. The following summer this grain was harvested by hand, the number of berries counted and the heads showing the largest number of berries of the best texture saved for seed.

During the summer of 1921 the Republic was able to secure through Professor Hendry enough seed barley of the Four Thousand variety to plant eight acres under field conditions. They also planted 20 acres of Mariout. During that season we were able to compare the production from the two varieties on the same type of soil and under the same conditions with the regular common coast barley.

This experiment seemed to show that the Mariout was not adapted to the condition prevailing in the Chino Valley but the Four Thousand proved a great success on the California Junior Republic farm.

History

The production of the Four Thousand barley dates back to an experiment which has been conducted for a number of years at the farm school at Davis under the supervision of members of the staff of the division of agronomy.

This barley is a pure line selection of common barley, and Professor Hendry reports the experiments at the farm showing that this improved selected seed would give a production of about 10 per cent over the common barley. Not much publicity has been given to this work as yet, and the results given here are simply the results obtained from one year's experiment in planting and harvesting this improved seed barley.

The experiments made by the college of agriculture seem to indicate that Four Thousand barley is more prolific than common or Beldi, but not as drouth resistant as the Mariout nor as suitable for sections where cold and wet soil prevail as the Tennessee Winter.

During October 1921 a ten acre tract was plowed to the depth of seven inches and left without further work until November 10 of that year. This field had that summer grown a crop of Indian corn which had been cut for silage.

During 1919 this field had been planted to alfalfa, and this was plowed under previous to the time the corn had been planted. In this respect the field was in better condition than is found in most cases where the dry farming method is used in raising barley.

In November, after a very light rain, this field was disked, harrowed both ways, re-disked and re-harrowed, thus leaving a very satisfactory seed bed. On December 2 eight acres of this field was planted to Four Thousand barley seed and two acres to common grown the previous year on the Republic farm.

The seed was planted by the broadcast method, 60 pounds to the acre being used of the Four Thousand and 75 of the common. After broadcasting the field was harrowed both ways and no further work done until after the rain early in January, when the young barley was harrowed over once.

The soil in which this barley was planted is what is known in the Chino Valley as "black adobe," a very heavy loamy soil.

Previous to the alfalfa planting this same field had grown barley under the dry farming method for some 15 years. After the last harrowing this field was left without further work until the time of binding. During this season the rainfall in the Chino Valley was about normal, namely about 12 inches.

With the growing of this barley was 40 acres of common barley on similar soil, but mostly on hillsides, or in sandy loamy soil so it could hardly be used as a check on the production for the experiment. However, two acres of common barley on the ten acre piece (on eight of which was planted Four Thousand) gave a very good check for the season. The results were as follows:

Four Thousand barley, eight acres, total production 250 sacks; average sacks per acre, 31¼; average weight per sack, 106 pounds.

Common coast barley, two acres, total production, 27 sacks; average sacks per acre, 13½; average weight per sack, 83 pounds.

The above figures go to show that Professor Hendry is very conservative in his statement that Four Thousand barley will yield 10 per cent more grain than the common, as our experiment on the Republic farm shows a yield of 50 per cent more than the common. We are willing to concede that this was made under rather favorable conditions but feel that even at a conservative estimate Four Thousand improved seed barley will yield 20 per cent more under regular farm practice in this locality. If this is true farmers will add on a basis to the normal production of ten sacks to the acre two additional sacks to their harvest, which will easily pay for the seed and harvesting of the grain.

The barley fields on the California Junior Republic school farm are typical of those throughout this section, having been a part of a large ranch which had been "dry farmed" to common for the past 15 or 20 years. This barley has been produced under very crude farming methods, the adobe soil simply being scratched by disking and the seed planted in a harrow seed bed with one harrowing.

This has caused continual lowering of the amount of barley produced per acre in this valley, therefore we believe that not only this valley but other interior sections of California will profit by using this improved seed made available through the agronomy division of the university of agriculture.

## LIMA RETURNS ON 1922 CROP

This has been a favorable year for growers of Lima and Baby Lima beans. Members of the California Lima Bean Growers Association received by December nearly $1,750,000 in early payments on their 1922 crop.

Such a large and early distribution to association growers is chiefly the result of the active sale and movement of beans at good prices, and is also partly due to a special financial arrangement which the association succeeded in making with several large banks.

Until this season, one of the biggest problems of the bean grower was to get enough money early in the fall, to pay his harvesting expenses and taxes, and the matter of getting quick returns has been the chief reason why many reanchers for years followed the practice of selling their crop to speculators shortly after the harvest, instead of marketing through the growers' cooperative association. The problem of early payments for the growers appears to have been satisfactorily solved by the association through its new advance payment plan.

In the late summer and early fall Manager Churchill worked out a plan which enables the association to secure about the middle of November short time loans by using warehouse receipts as collateral security. The association may secure up to about 70 per cent for the average season's crop value and not exceeding 4 cents per pound on actual or estimated recleaned weights. When required in excess of funds received from proceeds of sales, such money is secured at an interest rate of 6 per cent.

After an unsuccessful effort upon the part of certain speculative interests who sold "short" to "bear" the market in August and September, the bean market opened up favorably

early in October. Since then it has shown considerable activity and substantial price advances.

Growers affiliated with the California Lima Bean Growers Association received payments about October 15 on account of their September deliveries, amounting to approximately $730,000. and about November 15, on account of their October deliveries, they were paid a little more than $1,000,000. A portion of this last payment was to meet the request of growers for an additional payment of 1 cent per pound, but the greater part applied to bringing the total payment up to 3 cents per pound on both varieties, funds for which were secured from the proceeds of sales and shipments.

The 1922 production of regular Limas in Southern California was about 1,100,000 bags. There were about 170,000 bags of Baby Limas. It is estimated that more than half the crop of regular Limas and nearly 75 per cent of the Baby Limas were sold before November 15.

Because a large proportion of growers who are not members of the association sold their beans as soon as harvested and before prices advanced materially it seems reasonable to assume that members of the California Lima Bean Growers Association will fare better than the average of the outside growers this season.

## BEAN GROWERS WAREHOUSE

The California Bean Growers' Association is the latest of the California cooperatives to handle its products direct from the field to the distributors. Last week it put into operation the first unit of its Pittsburg plant.

This warehouse and proceessing plant is probably the most modern in the country and in it the beans of its members are cleaned, processed and stored. The warehouse is 300 by 80, with a six story cleaning, processing and sacking department; a 1000 sack capacity fumigator and warehouse with a capacity which will enable it to handle a half million sacks during the season.

It is situated on the San Joaquin River and has railroad connections with three trans-continental lines, making it possible to receive beans from all sections of the state and ship all over the world by rail and water.

The ultimate aim of the association is to pack and distribute its product under its own brand.

## CERTIFIED SEED POTATO GROWERS MEETING

The California Certified Seed Potato Growers will hold their annual meeting in Sacramento in the afternoon of December 13. There will be a very important address on the marketing of seed potatoes by E. G. Swift who has had large experience with marketing problems. A history of the development of certified seed work and of standards will be given by the potato specialist of the department. E. D. McSweeney will talk on the further improvement of certified seed. An election of officers will also take place.

This meeting will be held during the week of the Fruit Growers Convention and it is hoped that everyone interested in certified seed potatoes will arrange to be present.—W. V. Shear, Potato Specialist.

## LOWERED FREIGHT RATES FOR NEVADA

Reductions in freight rates are announced by the Southern Pacific on all commodities now moving under class rates from San Francisco and Sacramento to points in western Utah and in Nevada, as well as locally within Nevada, ranging as high as 50 per cent and averaging about 25 per cent. These became effective on November 25 on intrastate shipments and will become effective December 31 on interstate movements.

This will establish relatively the same scale of rates to branch as to main line points, however, observing the principle followed in California of somewhat higher rates for branch line hauls than for main line hauls. The installation of these new rates will form a more equitable basis for all freight moving under class rates from San Francisco into Nevada and western Utah as well as from Salt Lake City and Ogden into Nevada.

Book Review

## CYCLOPEDIA OF HARDY FRUITS

"Cyclopedia of Hardy Fruits" by U. P. Hedrick, vice-director and horticulturist of the New York agricultural experiment station, published by the Macmillan Company, New York.

This book was written "for fruit growers, nurserymen, students, agricultural agents, buyers of fruits," in fact everybody interested in fruits, and that includes the whole world. It is a cyclopedia of "hardy" fruits, and California is a grower of hundreds of thousands of acres of hardy fruits so all her growers will have keenest interest in Dr. Hedrick's book. Even the grower of subtropicals will find it almost a necessary addition to his library. Dr. Hedrick's life has been spent with fruit trees, and he has brought together facts in this book which will "aid in identification of varieties," "guide in choice of varieties," "sort the names now in use," "state in what regions varieties originated," etc. Dr. Hedrick says in his preface:

"The purpose of this manual is to describe the varieties of hardy fruits grown in North America. A new book describing hardy fruits needs no justification. Downing's "Fruits and Fruit Trees" and Thomas' "American Fruit Culturist," in their many editions, have served two generations of fruit growers. Both are worn out tools. Most of the varieties described by these authors are not now found in American orchards or nurseries. Many of the kinds they discuss have never been grown in this county, the descriptions published having come from European fruit books. On the other hand, none of the varieties of this century is described in Downing or Thomas. Moreover, the descriptions of these old workers are too scant and fragmentary to have great value in modern pomology. A new manual of fruits is needed to take the place of Downing and Thomas, valuable as these books were for their day.

"The plan of the book is simple. A brief glance through its pages should suffice to reveal even to the beginner in the study of pomological literature the arrangement of fruits and their varieties and the presentation of names and synonyms. Clearness and simplicity have been sought that the reader may with the least trouble obtain a perfect mental picture of the variety described."

The volume is about the same size as the voulme of Bailey's Cyclopedia of Horticulture and is magnificently printed and bound. There are many drawings and half tone illustrations. The frontispiece is a plate of especially fine color work showing a Baldwin apple. There are also other color plates showing Bartlett pear, Concord grape, and Good Luck strawberry. Although it is a cyclopedia it is arranged in parts and chapters. The fruits are divided into pome fruits, drupe fruits, grapes, brambles, currants and gooseberries, heath fruits, strawberries, and then a chapter given up to miscellaneous fruits such as persimmons, mulberries, pawpaws, elders, highbush cranberries, Buffalo berries, etc.

There are 26 chapters touching upon these various types of fruits. For instance, under part II, which deals with drupe fruits, there is one chapter given to "botany of the drupe fruits," then a chapter each given to apricots, cherries, nectarines, peaches, plums, etc.

## SUGAR CANE BUD SELECTION

A. D. Shamel, in charge of horticultural and pomological investigations in California, writes from Riverside:

"I find the articles you sent on sugar cane diseases very interesting, particularly as the authors recommend in each case stool selection as control measure. This fits in with our plan of bud selection, in Hawaii, based upon superior parent stools. Our extensive progeny fields on 39 of the 43 plantations are for the purpose of finding inherently superior stools for propagation."

# It's a Good Combination

"Land Development"—a 75-page Hercules Powder Co. book, and a box of

***HERCULES FARM DYNAMITE***

is a money making combination.

The one tells you how to do it; the other does it.

"Land Development" is profusely illustrated with diagrams and photographs, and explains clearly all about the uses of dynamite on the farm—blasting between the rows, tree planting, ditching, stumping and boulder blasting. It will be sent free upon request. Write for it today.

## POULTRY

### BABY CHICKS

Every Day—Ducklings, turkeys, hatching eggs—dogs, cats, birds, rabbits, pullets.

Write for prices

FANCIER'S EXCHANGE

640 So. Main St. Los Angeles

**For Sale**—For 18 years we have produced the best White Leghorn chicks. All the best blood of the world is represented in our flocks. Chicks grow into exceptional layers. Last season our customers had almost no death loss in their brooders. We delivered every order in full and on time. Send for new circular. We ship everywhere. Leghorns, Rocks and Reds $15.00 per 100. P. Cook Chick Ranch, 1717 Valley Blvd., Alhambra, Calif.

**Hoganized White Leghorn Baby Chicks**—The first of September we start on our 15th year hatching. Will have chicks every week until June. All our hatching eggs come from one flock of 5000 Hoganized hens. Mated to male birds raised from the best layers in the flock. Shipped by Parcel Post, guaranteed to arrive alive and strong. Lyon Hatchery, Gardena, California.

**Mr. and Mrs. Poultry Farmer:** 200,000 baby chicks for 1923 delivery from Hoganized flocks of fully matured breeders. No pullet eggs used. White and Brown Leghorns, Anconas, Minorcas, R. I. Reds, Barred Plymouth Rocks. Send your orders now. Will deliver when you want. Ansel W. Robison, 1196 Market St., San Francisco. Oakland Branch, 1737-39 Broadway, Oakland.

**Baby Chix Electric Hatched**—Booking orders for 1923 delivery. R. I. Reds, Barred Rocks. Our S. C. White Leghorns are from hens of George England strain mated to cockerels from the A-1 matings of the trap-nested stock of the Bonnie Brae Farm at Burbank. Write for price list. RED LOCK HATCHERY, 305 North Main Street, Artesia, Calif.

**The Parent Stock from Which we get our** day old chicks, is selected for vitality and laying capacity. We specialize in White Leghorns, but will furnish other desired breeds. Our capacity being limited by the necessity of carefully selecting only the best stock, orders should be sent in promptly. THE STEVENSON HATCHERY, Watsonville, Calif.

**Poultrymen Attention.** We are now booking orders for hatching eggs, baby chicks and 8 weeks old pullets, from our well selected and culled heavy laying utility stock. S. C. White Leghorns exclusively. Only a few more dates open for hatching eggs. All our cockerels are from trapnested stock. Pine Tree Poultry Farm, Los Gatos, Calif.

**For Sale**—Pedigreed White Leghorn Cockerels—Mother laid 252 eggs at Santa Cruz egg laying contest. Father's mother laid 306 eggs, grandmother, 312 eggs. The egg habit can not be fed into a hen, it must be bred in. California Poultry Farm, R 1, box 160, Modesto, California.

**Weis Farm Baby Chicks** are produced from the world's best laying strains. Cockerels used with the breeders this year come from hens with records up to 312 eggs. 25 chicks, $4.00; 50 chicks, $8.00; $15 per hundred. Weis Farm, P. O. Box 351. Petaluma, Calif.

**Baby Chicks**—From selected breeders. Order now for 1923 delivery. White Leghorns, R. I. Reds, Barred Rocks. Safe arrival guaranteed. Write for circular and price list. The J. H. Stubbe Poultry Ranch and Hatchery, Box 67-E, Palo Alto, Calif.

**Baby Chicks of Seven Varieties.** Order now for early Spring delivery from Fresno headquarters. Rohrs & Anson, 2028 Belmont Avenue, Fresno, California.

**Watch Us Grow** Quality Chicks. Booking orders now for the season of 1923. Brown and White Leghorns, Barred Rocks, Rhode Island Reds and Anconas. Order early. Ohlen's Hatchery, Campbell, California.

**White Leghorn Baby Chix for summer and fall months from stock Accredited by Sonoma County Farm Bureau.** We guarantee safe arrival. Write for prices and literature. The Pioneer Hatchery, 409 Sixth Street, Petaluma, California.

**Santa Cruz Chicks** from my heavy laying strain of White Leghorns that are hatched right and prices are right; 12 years experience at hatching and breeding in Santa Cruz, Calif. T. E. Blake, Oak Knoll Poultry Ranch.

**Booking Orders Now for Fall and spring** delivery. Trap nested, single comb White Leghorn chicks, few pullets and pedigreed cockerels. Pramme Poultry Ranch, Los Molinos, California.

**Baby Chicks and Hatching Eggs** from trapnested S. C. White Leghorns mated with good cockerels. Write for folder. Harry J. Humphrey, 534K Chanticleer Avenue, Santa Cruz, Calif.

White Leghorn Baby Chicks from my selected and pedigreed stock. I have bred Leghorns since 1908. Write for circular and price. H. A. Schlotthauer, Exeter, Calif.

## POULTRY

**Hi-Grade Chicks For Less**—We want every one who reads this advertisement to write to us today for our new price list, just off the press. You will make a costly mistake if you are interested in BARRED PLYMOUTH ROCK, R. I. RED, W. LEGHORN, or ANCONA BABY CHICKS; if you do not get our prices. By FAIR, SQUARE, and HONEST dealing HARGETT & SON for the past seven years has made thousands of good boosters,. We offer chicks from what we believe are the best flocks in Southern California, at a price that will surprise you. Output for 1923; 8000 chicks a week. Hargett & Son, Route 2, Box C, Compton, California.

**Profitable Poultry News**—Capacity 200,000 chicks off every week of year. One customer's history: In 1919 bought 1000 Leghorns; 1920, 1200; 1921, 1200; 1922, 1200 Leghorns, 5000 Reds; for 1923, 10,000 Reds alone. Why? Many practical specialists producing the best in 21 varieties for every kind of market. 200-290 egg strain Leghorns, Reds, Rocks, Minorcas, Anconas, Wyandottes, Brahmas, Andalusians, Orpingtons, Ducks, Turkeys. For quarter century imported, trapnested, selected for vigor, growth, beauty, eggs. Booking ahead reduced for every winter, Spring month. Mail address: Profitable Poultry, 13 North Fair Oaks, Pasadena.

SANTA CRUZ CHICKS
FIRST HATCH NEW YEARS DAY

We specialize on Hyde and Ramer White Leghorns; "Hill Crest" Reds, and Buhrman's White Wyandottes. ## COLORADO RIVER COMPACT

(Continued from Page 611)

ors of the states affected, upon the request of one of them, shall forthwith appoint commissioners with power to consider and adjust such claim or controversy, subject to ratification by the legislatures of the states so affected.

Nothing herein contained shall prevent the adjustment of any such claim or controversy by any present method or by direct future legislative action of the interested states.

Article 7.—Nothing in this compact shall be construed as affecting the obligations of the United States of America to Indian tribes.

Article 8.—Present perfected rights to the beneficial use of waters of the Colorado River system are unimpaired by the compact whenever storage capacity of 5,000,000 acre-feet shall have been provided in main Colorado River within or for the benefit of the lower basin. Then claims of such rights, if any, by appropriators or users of water in the upper basin shall attach to and be satisfied. All other rights to beneficial use of waters of the Colorado River system shall be satisfied solely from the water apportioned to that basin in which they are situated.

Article 9.—Nothing in this compact shall be construed to limit or prevent any state from instituting or maintaining any action or proceeding, legal or equitable for the protection of any rights under this compact or the enforcement of any of its provisions.

Article 10.—This compact may be terminated at any time by the unanimous agreement of the signatory states. In the event of such a termination, all righs esablished under it shall continue unimpaired.

Article 11.—This compact shall become binding and obligatory when it shall have been approved by the legislatures of each of the signatory states and by the congress of the United States. Notice of approval by the governor of each signatory state to the governors of the other signatory states and to the president of the United States. And, the president of the United States is requested to give notice to the governors of the signatory states of approval by the congress of the United States.

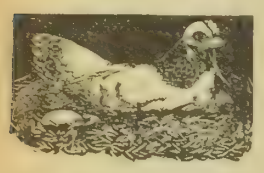
In witness hereof, the commissioners have signed this compact in a single original which shall be deposited in the archives of the department of state of the United States of America and of which a duly certified copy shall be forwarded to the governor of each of the signatory states.

## NATIVE CALIFORNIA STRAWBERRY

The Pacific Coast wild strawberry grows along the ocean from Alaska to southern Chile and in South America is cultivated in field and garden, yet nowhere in North America is it accorded such generous treatment. Its botanical name, Fragaria Chiloensis, indicates the country in which botanists first found it. It has entered more largely into the parentage of cultivated named varieties than any other species. The contributing species of secondary importance is from the Atlantic Coast and known as Fragaria Virginiana. These two are the progenitors of all cultivated sorts, not only in this country, but in Europe.

# A New Discovery Makes Hens Lay

Any poultry raiser can easily and quickly double his profits by doubling his egg yield through the remarkable discovery of M. B. Smith, a Kansas City chemist.



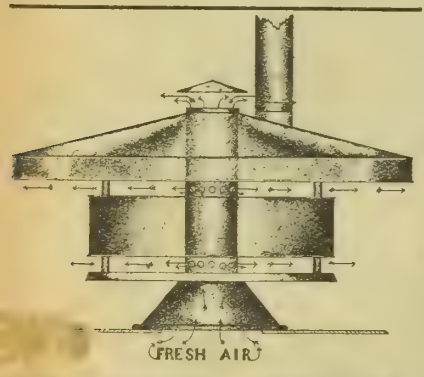
Working along entirely original lines, Mr. Smith discovered why hens lay less in winter than in summer and perfected a formula that turns loafers into layers and profit makers.

Within five or six days this discovery, which is called Ditto Egg Tablets, will rejuvenate your flock. Your hens will go strutting and cackling about with red combs and full of life and pep. Every nest will yield an egg nearly every day in the week, which means a lot, since eggs are certain to sell for 60 cents or more. This is not guess work as over 100,000 successful poultry raisers testify to the value of Mr. Smith's products.

Although different from anything you ever heard of, Ditto Egg Tablets are easily administered by simply dropping in drinking water.

So confident is Mr. Smith you can double or triple your egg yield, that he offers to send two large $1 packages of Ditto Egg Tablets (enough for a season) to any reader who will write for them. If you are satisfied they cost only $1 on this introductory offer, otherwise, nothing.

Send No Money—just your name and address to M. B. Smith, 1217 Coca Cola Bldg., Kansas City, Mo. The two $1 packages will be mailed immediately. When they arrive, pay the postman only $1 and postage. Use the tablets 10 days. If you are not getting more eggs or are not satisfied for any reason, simply return unused tablets and your money will be returned immediately without question. A big Kansas City bank guarantees the reliability of this offer. Write today before this introductory offer is withdrawn, as you can sell one package to a friend and thus get your own free.



# BROODER STOVES

Our LATEST Catalogue No. 70 is ready to be mailed FREE to any address. You want to brood your chicks around a stove that will furnish WARM, DRY, FRESH AIR. "PRIDE OF PETALUMA" furnishes this condition. FUEL is AUTOMATICALLY controlled, SAFE, RELIABLE and HIGHLY EFFICIENT.

# Poultry Queries

(Conducted by Jean A. Koethen)

### Intensive Turkey Raising

I have been greatly interested in what you have had to say about turkey raising and would suggest that you visit Mrs. Margaret C. Seelye at her ranch in Ontario if you want to see real turkey raising. She and her son have over 600 healthy birds. They have no alfalfa range and the turkeys are all in a three acre orchard run. She feeds loose alfalfa hay and corn. She has lost a remarkably small percentage of her hatch. It has seemed to me that you have discouraged a good many people by saying that large ranging space was imperative.—Subscriber, Ontario.

Since writing the article to which this subscriber refers I have seen 400 birds kept in remarkably vigorous condition on two acres, and I know some breeders have been successful in raising turkeys under intensive conditions. I know, too, that the number of poults lost every year by even successful breeders is very large and that where one succeeds in raising practically all the hatch a dozen fail. I shall certainly visit Mrs. Seelye's ranch at the first opportunity, for I am most anxious to learn the secret, if secret it is, of raising turkeys without range.

### Dry Mash Formula

Will you please tell me what you think of this mash formula which a friend of mine is feeding his hens: 750 pounds each bran, middlings and ground barley; 150 pounds each linseed and cottonseed meal; 350 pounds meat scraps; 250 pounds dry buttermilk; 50 pounds charcoal; 15 pounds salt; 35 pounds condition powder?—Subscriber, Redlands.

This formula is evidently based on one recommended a year or so ago by the poultry division of the state college of agriculture. Had your friend followed it exactly he would have used 450 pounds meat or fish scrap instead of 350 pounds meat scrap and 250 pounds buttermilk. As it is, he has 150 pounds more of high protein feed in addition to the 35 pounds of condition powder Some people think that because some protein is good more is better, but it does not follow. More hens die from too much protein than ever fail to lay because they get too little. I am satisfied of that. The mash used last year at the Santa Cruz laying contest consisted of 240 pounds bran, 160 pounds middlings, 100 pounds each ground oats and corn meal, 40 pounds each soybean and linseed meal and 60 pounds each fish scrap and meat scrap, and this is probably the last word in formulas as far as the poultry division is concerned.

### Bumblefoot

Kindly tell me what to do for a rough, fleshy growth on the ball of my turkeys feet. One duck also had it.—Subscriber, Orland.

This is apparently what is called bumblefoot and comes from a bruise. Are your turkeys roosting where they have to jump down onto a very hard or rough surface? Turkeys are not so susceptible to this trouble as chickens becaus they use their wings more, but if they are roosting in a house where they have not room to use their wings they might easily bruise their feet dropping with their heavy weight onto a hard floor. If the growth is hot and inflamed, as if it contained pus, you will have to open it and cleanse with peroxide of hydrogen or boric acid solution. Then anoint with carbolated vaseline or some other antiseptic ointment and bandage, if you can, to keep out the dirt. If the growth does not seem inflamed removing the cause will probably cure it without treatment, but daily bathing with witchhazel is always good for bumblefoot.

### Pendulous Crop

A tom turkey has large bag, apparently filled with water, hanging the length of the breastbone. Can it be cured?—Subscriber, Orland.

Pendulous or enlarged crop is believed to be due to irregular feeding. The tissues have gradually become stretched and the only remedy, outside of an operation, is bandaging firmly so that they may relax and return to their normal condition.

### Grain Mixture

We have had excellent success following your advice with both chickens and turkeys. Out of 150 young chicks last spring we lost but one, and our turkeys, every one, grew and developed splendidly. We have birds hatched April 28 that weigh 24 pounds. At what age should our pullets be put on a laying mash, and how may we combine wheat, which can be bought at a reasonable price, with corn and milo maize which we can readily raise? Is it all right to feed milo and corn exclusively to cockerels as hard grain with wet bran mash in the morning?—Subscriber, Fallbrook.

The time at which pullets are given a laying mash depends somewhat on their maturity. Some poultrymen put it before them as early as 3½ or 4 months and thereafter use nothing else. Others let them have it at 3½ months, but if they find the pullets beginning to lay before they have the requisite weight drop the laying mash and put the birds on a maintenance mash of bran and ground bone to delay laying till they are thoroughly mature. Others keep them on the growing mash till the age of 4½ to 5 months then give the laying mash and bring them into full laying as soon as possible. The age of the pullets when they lay their first eggs has always to be taken into consideration. Early hatched birds are more likely to lay prematurely than those that break the shell in April and May, and are therefore the pullets that will need to be held back. The best combination you can make with wheat, corn and milo is to make the mixture ½ wheat, ¼ cracked corn and ¼ milo. A better combination would be ⅓ wheat, ⅓ cracked corn and ⅓ whole or rolled barley. Corn and milo are too much alike to use together. Perhaps you could have the milo ground and add it to the mash. If you are fattening the cockerels make your morning mash half bran and half corn meal and moisten with sour milk or with cooked

**POULTRYMAN'S CALENDAR:—DECEMBER, RING OUT THE OLD, RING IN THE NEW**

December ends the poultryman's year. It is a time for taking stock, striking the balance for the preceding 12 months, and for preparing for the hatching season, which begins the first of January. Has the year 1922 been a satisfactory year? If not, why not? Were the causes beyond our control or have there been avoidable mistakes that must be avoided another year? Did we try to raise too many chicks or too few? Did we use every care in selecting breeding stock? Was our housing sufficient and comfortable? Was every precaution taken to select and ship only marketable eggs or did we slip in "dirties" and "cracks" and eggs we knew were not perfectly fresh?

Have we ample brooding facilities for next season's hatch? If not, now is the time to make provision. Is our supply of greens adequate? If not, now is the time to plant. Do we resolve to raise our chicks with less loss next season? Now is the time to break up our fallow ground, in other words, the hard, filthy soil of the chicken yards, and plant to rape or mustard or some other rank grower that will purify the soil. Now is the time to disinfect brooders, brooder houses and laying houses so carefully that not one germ or mite is left. Nineteen hundred twenty-three must not find us unprepared in any respect.

**"Stronger Chicks"**

Give your chicks a fair chance—give them a good incubator in which to start.

**Stop Hatching Weak Chicks with Cheap Incubators**

It's no mere "claim" that the right incubator does produce better chicks. One of our Iowa dealers writes: "We can get hundreds of testimonials of Stronger Chicks and almost Perfect Hatches with the Queen."

A good incubator is the start to profitable poultry production—it's the cheapest thing you can buy.

Remember, it is not how many you **hatch** that counts, but how many you **raise.**

The Queen is known all over America as a high-grade moderate-priced incubator that delivers high-precentage hatches of chicks that live and grow. Sizes, 70 to 1000 egg.

You ought to have a Queen Incubator and Brooder. Ask for our Free Book describing our full line.

table scraps, vegetable parings, etc. Milo and corn will do nicely for their grain feed. Cockerels intended for the breeding yard should have the same grain mixture as the pullets.

### Overfeeding

My 200 White Leghorn pullets are troubled with small thick headed worms. Please tell me what to do and how to feed. I feed a wet mash of soaked rolled barley, laying mash and greens early in the morning, a gallon of mixed dry feed at 9 o'clock, grass at noon, wet mash with a pound of cracklings mixed in at 4 o'clock, mixed dry feed before roosting time and dry mash before them all the time. They have a large run but half of them sit around moping all day.—Subscriber, Auburn.

No wonder they sit around moping when you keep their crops so full. Moist mash is used only as an appetizer, once a day at the most, but you are giving two meals of moist mash and two of hard grain in addition to the dry mash. Your work will be far lighter and the hens will lay more eggs if you cut down the ration to mash in the hoppers all day and one liberal feeding of hard grain an hour before roosting time, in addition to the green feed, of which you cannot feed too much. Make the hard grain mixture one-third wheat, one-third barley and one-third cracked corn, and allow about 14 quarts per day for the 200 hens. It would be a good plan to sprout part of the barley. Feed the greens as early as 9 o'clock in a receptacle where they will keep fresh all day. If you are anxious to use a moist mash in addition to the above feed it about 2 o'clock and moisten with sour milk if you can, but I suspect your hens are already too fat and will do better without it until they are trained down. I do not know just the character of the cracklings you have been feeding, but they are probably too fattening and should be eliminated. For the worms try tobacco dust in the dry mash, allowing 1 pound of tobacco to 50 of mash. Do not use this more than three weeks at a time.

### Sex in Geese

May I offer a correction to your reply to the query regarding sex in geese? The female has the coarser voice and the gander a shrill, high pitched voice. I find the easiest way to distinguish them is to take them out of the flock, one at a time, and confine a short distance away. Within five minutes or less they will send out a call to the rest of the flock, and the sex is then easily discernible by the voice. The gander has a longer neck and longer legs but this is not readily noticed at first.—Subscriber, Tujunga.

### East Front for Laying House

Last week you advised fronting hen house to the east. In this section we are obliged to build all our houses fronting the west, because of the prevailing cold easterly winds. One poultryman whose house fronts east lost his entire flock just recently, I think from roup.—Subscriber, Tujunga.

We live and learn. After spending nearly 40 years in California I thought I knew to a certainty that our prevailing winds are northerly and westerly, but it seems there are exceptions. I should have said, face houses away from the direction of prevailing winds, whatever it may be.

### Balanced Ration

I am feeding the following ration: Scratch mixture, equal parts wheat, cracked corn and barley; mash, 500 pounds each of bran, shorts and corn meal, 300 pounds meat scraps, 200 pounds linseed meal (O. P.) If equal parts of mash and grain are fed, will this make a balanced ration?—Subscriber, Ontario.

It would be better to use less corn meal in the mash and more bran and shorts. If you make the formula 700 pounds bran, 500 pounds shorts and 300 pounds corn meal, leaving the amounts of linseed meal and meat scrap just as they are, you will have a better balance, since you have a good deal of cracked corn in the grain mixture.

## THE TURKEY MARKET

From the most reliable information obtainable it is safe to assume that there is a slight increase in the production of turkeys in most sections of the state over last year. Although some growers are of the opinion that there is little or no increase in their immediate localities, many report an increased production ranging from 5 to 10 per cent over last year.

As an offset to this probable increase many turkey producers state that only a small per cent of their turkeys will be in a marketable condition for the Christmas trade.

Information as to prices being offered by wholesalers is very meager, according to Fred N. Bigelow, chief of the division of markets. From some sections comes the report that buyers are offering 38 cents per pound, on fat, live turkeys and a delivered price of 45 on well conditioned dressed turkeys. It seems reasonable to believe that prices on both live and dressed turkeys will not vary greatly from prices paid last year during the holiday season.

If early receipts prove light, prices may soar above 45 cents on dressed turkeys, while heavy shipments may act to the advantage of the buyer and consumer and bring lower prices. In most sections feed appears to be plentiful, while in a few localities growers plan to market their turkeys early because of a scarcity of feed. It is considered a very poor policy to ship turkeys not well conditioned, and farmers might advantageously hold back their shipments where food is plentiful.

Local cold storage holdings are well cleaned up and total approximately 27,000 pounds of dressed turkeys. There were close to 100,000 pounds of dressed turkeys in cold storages on this date one year ago.

Farmers should be cautious in shipping only to reliable dealers and might well insist on a contract in writing and a reasonable deposit where turkeys are bought outright. Growers should not forget that the general appearance of the turkey is of very much importance and the usual instructions of dealers on the preparation of the birds for market should be closely followed.

## BABY CHICK ASSOCIATION

The latest along poultry lines is the formation of the International Baby Chick Association. Its object is to foster, promote, improve and protect the baby chick industry and all allied branches of poultry husbandry. Harry R. Lewis of Davisville, Rhode Island, is the president and G. R. Spitzer of Harrisonburg, Virginia, is secretary-treasurer.

# Easy Now to Double Winter Egg Yield

Proven Remedy Gives Remarkable Results—Turns "Boarder" Hens into Profitable Layers—

Winter egg yields, double and treble those of former years, are now being made by many poultrymen through the use of a compound that science has finally perfected.

This wonderful medicine, which is called "Hick's Egg-Lay," contains rare and expensive ingredients mixed so as to quickly increase the egg yield. The medicine acts on the reproductive organs and causes double and treble the usual number of ova (the germ cell of the egg) to be produced. Thus you get many more eggs and get them during the time they bring the highest prices.

Hick's Egg-Lay is prepared for convenience in tablet form. Simply dissolve one tablet in a quart of water. This is the surest, easiest and quickest way ever discovered to get more eggs.

**A Trial Costs You Nothing**

Mr. Hick is so confident that Hick's Egg-Lay Tablets will double and treble your egg yield that he is making a special guaranteed offer of one regular double strength $1.00 package of Egg-Lay Tablets and a full size $1.00 package of Hick's famous Lice-Go all for $1.00.

Lice-Go is added to the drinking water. The medicine taken into the system of the bird comes out through the oil glands of the skin and every louse or mite quickly leaves the body. Keeps the birds always free without the poultry raiser doing any work. If you would rather have two $1.00 packages of Egg-Lay Tablets or two $1.00 packages of Lice-Go instead of one of each, say so on your order. Send $1.00 today (currency, money order, check, etc.) to Chas. M. Hick & Company, Dept. 929, 1018 So. Wabash Ave., Chicago, Illinois. If you prefer, send no money. Just your name and address and pay postman $1.00 and postage on delivery. If, after thirty days' trial, you are not absolutely satisfied, write Mr. Hick and your money will be refunded. This offer is absolutely guaranteed, so don't hesitate to make the test.

# Get Winter Eggs!

See to it that there is song and cackle, scratch and action, going on in your poultry yard.

That's when the eggs come.

*Feed*

*Dr. Hess Poultry*

## PAN-A-CE-A

See them get busy. It gives hens pep.

Nux Vomica is what does it—that greatest of all nerve tonics. A Pan-a-ce-a hen can't hold still. It's her good feeling that makes her hop around.

Pan-a-ce-a has Quassia in it to make hens hungry. Great combination! One makes them eat—the other helps them digest what they eat.

No dormant egg organs when that combination gets to work on a hen's system. You just get eggs—eggs.

A Pan-a-ce-a hen is always a hungry hen—an industrious hen. She gets off the roost winter mornings, ready to scratch for her breakfast.

Tell your dealer how many hens you have. There's a right-size package for every flock.
100 hens, the 12-lb. pkg. 200 hens, the 25-lb. pail
60 hens, the 5-lb. pkg. 500 hens, the 100-lb. drum
For fewer hens, there is a smaller package.

*GUARANTEED*

*I spent 30 years in perfecting Pan-a-ce-a.*

### LIVESTOCK

Weekly summary, Saturday, December 2, 1922, furnished by Federal-State Livestock Market News Service, 1028 Pacific Finance Building, Los Angeles.

Cattle: Market improved opening of weak, better grades active. 8.00 reached on five loads steers, three Colorado, two Wyoming. Steers strictly good, 1153 to 1193 pounds. Numerous shipments northern steers cleared 7.00 to 7.50, with fleshy Northern steers, suitable for a short turn in the feedlot, 6.50. Common southern quoted 5.50 to 6.50. Some light Arizona stock steers sold on country account 4.25 and 4.35. Beef cows scarce, 4.00 to 5.25 taking majority, fat northern cows 5.50 or better. Canners and cutters 1.50 to 3.25. Bologna bulls 3.00 to 4.00. Fairly constant inquiry for feeder steers and good northern feeders were picked up at 6.00 to 6.50. Cattle from Arizona and Texas ranged from 4.25 to 5.50.

Calves: Receipts, liberal, demand was narrow. Most from Arizona and Texas, plain quality, 250 to 300 pounds. These sold largely from 6.00 to 7.25, choice 200 pound vealers 7.75 and better. Culls around 5.00.

Hogs: Market dull, local packers oversupplied. Last week end the crop of 160 to 200 pound hogs was cleaned up at 8.75 to 9.00, packing sows 7.00. Opening this week choice 190 pound hogs topped at 9.50, 300 pound rough sows at 7.25.

Sheep and Lambs: No receipts. Market firm, good and choice light lambs easily quotable 13.25 to 13.75, or better.—Nelson R. Crow, local representative.

### POTATOES AND ONIONS

These are the actual prices obtained Tuesday, December 5, 1922, furnished by wholesalers in their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on walk. There may be slight fluctuations during the day's trading.

Potatoes: Demand and movement moderate, market steady. Northerns: Rivers, 1.50@1.70; poor, low as 1.40 cwt. Idahos: Russets, 1.40@1.60. Sweet Potatoes: Locals: Nancy Halls, 2; Jerseys, 2@2½ lb. Northerns: Nancy Halls, 2½@3 lb.

Onions: Demand and movement moderate, market firm. Stocktons: Yellows and Browns, 2.25@2.50; Whites, best, 3@3.25; poorer, 2.75 cwt. Locals: Whites and Yellows, 75; Spanish, 1.00 per lug; 3.00 per cwt.

Garlic: Mex. and Northern, best, 8; poorer, 7.

### VEGETABLES

These are the actual prices obtained between 7 and 8 o'clock, December 5, by wholesalers in their sales to retailers, pedders, hotels, restaurants, cafeterias, etc. Terms: Cash on the walk.

Beans: Kentucky Wonders, 11@13. Limas, 6@7.

Weekly livestock market summary, Tuesday, December 6:

Bunched Vegetables: Per dozen bunches: Turnips, beets, 30@35; carrots and spinach, 25; parsley, 15; onions and radishes, 10@15; parsnips, 40.

Cabbage: Local and Northern, best, 2.

Cauliflower: Per doz., 1.50@1.75; poorer, 1.25 doz.

Celery: Wide range in quality and prices. Locals: best, 3.25@3.50; poorer, 2@2.50. Northerns: 3.25@4 per crate according to quality.

Cucumbers: Southern, 1.85@2.00 per flat; 3.00@3.25 per lug.

Eggplant: Local, 6@7 lb.

Lettuce: Market steady. Locals: Ordinary, 1.00; best, 1.35@1.50 field cr.

Peas: Orange County and Carlsbad, best, 14@16.

Peppers: Locals: Bells, mostly, 7@8; Chilis, 4½@6; pimentos, 4@6; Cherry Chili, 12@13.

Sacked Vegetables: Per sack. Beets and Carrots, 90@1.00; Turnips, 1.25@1.50.

Squash: Market steady. Locals: Summer, lugs, 1.50; Hubbard and Banana, 2½; Cream, 3@3½.

Tomatoes: Demand moderate, movement slow, market dull. Local: lugs, ripe best, 1.25@1.50; poorer, 80@1.00.

### FRESH FRUIT

These are actual prices obtained December 5, by Los Angeles wholesalers from their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc., as compiled by the U. S. Bureau of Markets. Terms, cash on the walk.

Apples: Demand and movement moderate, market steady. Northerns: Bellefiowers, fancy, 3½ tier 1.30@1.40; 4 tier, 1.35@1.45. Utahs: Jonathans, loose, 3½@4½; poorer, 3 lb. Idahos: Jonathans, loose, 3½@4. Washingtons: Jonathans packed, extra fancy, 2@2.15; fancy, 1.75@1.90; overripe, soft, 1.50@1.75; Delicious, extra fancy, 2.40@2.65; Yellow Newtowns, fancy, 1.65@1.75 per box. Oregons: Spitzenburgs, extra fancy, 2.15@2.25 per box.

Casabas: Northern, 1.00@2.00 cwt.; local, 1.50@1.75 cwt; mostly, 1.50 cwt.

Cranberries: Cape Cods: Late Howes, 18.50@19.50 per barrel; 9@9.75 per half barrel crate. New Jerseys: Late Howes, 18@19 per barrel, crates 9@9.50.

Grapes: Locals and Northerns: Muscats, 3½@4; poorer, 2@3; Malagas, best, 4@4½; poorer, 2@3; Red Emperors, 4@4½; poorer, 3 lb.

Pears: Northerns and Locals: Bartletts, best, 7@8; poorer, 5@6.

Persimmons: Lb., 9@11; poorer, 7@8.

Pomegranates: Lb., 6@8.

### CITRUS FRUIT

Grapefruit: Arizonas: 64-96 sizes, seedless, 5@6 pr box. Imperial Valley, 6.50 per box. Northern, 5@5.25 per box.

Lemons: Special brands, fancy 8.00@9.50; choice, 6.00@8.00; market pack,, 3.50.

Oranges: Valencias, special brands, 6.00@7.00 according to size. New crops Northern Navels, 6.50@7.25 box; Market pack, 4.50@4.75.

### HONEY

Southern California: Bees will generally go into the winter season with plenty of stores. Next year's crop outlook considered good. Demand good and market shows firmer tendency, especially for better grades, although no great activity looked for until the first of the year. Several carlot shipments made recently to East Coast by boat via Panama Canal. Carlots for outside shipments quoted on usual terms basis, per pound, White Orange, 10½@11; White Sage, 9½@10; Light Amber Sage, 7½@7¾; Light Amber Alfalfa, 6¾@7. Recent local less than carlot sales reported of White Orange at 9@10, and Light Amber Sage at 6½, and Light Amber Sage at 7, while some beekeepers have sold White Sage at 8 per pound in carlots, beekeepers receiving 22@25 per pound. Cash for beeswax.

### HAY

Following are prices in the general market to growers f. o. b. Los Angeles in carload lots; handling and commission must be added to obtain retail prices on new hay:

A slightly weakened condition obtains because of increased receipts, but it is thought to be only temporary.

| | |
|---|---|
| Tame Oat | 24.00@26.00 |
| Barley Hay | 18.00@20.00 |
| Rabbit Alfalfa | 26.00@28.00 |
| No. 1 Dairy | 24.00@26.00 |
| Standard Alfalfa | 18.00@20.00 |
| Wheat Straw | 10.00@12.00 |
| Barley Straw | 9.00@11.00 |

Prices for alfalfa being received by growers on the ranch vary greatly. As approximate figures we may say that Rabbit Alfalfa is bringing the growers around 24.00@26.00 as a fair average. No. 1 dairy is varying from 15.00@18.00 with 16 as a mean or average price. Standard, 10.00@12.00.

### GRAIN

Prices L. A. Grain Exchange, December 5:

Milo, 100 ton lots, December del., 2.05.

Barley, 100 ton lots January del., 1.60.

Cal. Farm Bureau Marketing Exchange reports December 5:

Some declines last week. Growers inclined to sell milo immediately, due to the comparatively high price, and this heavy offering has pushed the market down. It is only worth about 2.10 to 2.12½ Los Angeles for December delivery. Another thing that has made a slow market is the damaged milo coming in from San Joaquin Valley. Rains in that section have increased the moisture contained so that several cars have been arriving hot and musty. This must be sold at a cheaper price and consequently affect the good milo unfavorably.

Barley: In active demand. After first of the year a better market will probably be available for barley. Present values from 1.60 to 1.65, Los Angeles.

Wheat: Feed wheats are in a state of decline. It is hard to fix a market price; possibly 2.15 to 2.20 would be about right. Good milling is bringing good prices from 2.35 to 2.42½.

Eastern Corn: This has declined, selling at from 1.75 to 1.80, according to date of delivery.

The San Francisco markets look somewhat easier than Los Angeles. Barley is quoted at from 10 to 15 cents less than Los Angeles and wheat at from 5 to 10 cents less.—E. W. T.

# San Francisco Markets

San Francisco, December 5, 1922.

### BUTTER

Sales on Dairy Exchange:

Following quotations carry a jobber-to-jobber discount of 10 per cent, plus a seller's handling charge of 2 per cent of net invoice:

### BEANS

Shipping prices for 100 pounds. Quotations from California Bean Growers' Association, C. R. C., 1922 beans:

Laarge whites, 6.25; small whites, 6.35; pinks, 6.50; Mexican reds, 5.75; red kidneys, 7.40; Henderson Bush, 9.50; cranberry, 7.55; bayos, 7.50; blackeye, 5.50.

### HONEY

Colonies in good condition with plenty of stores for winter. Very little activity reported in shipping areas as supplies are rapidly becoming exhausted, especially of comb. Car lot sale of Star Thistle reported at 9 per lb. Car comb reported sold in Inyo County, 50 per cent fancy, at 2.75 per case.

### HAY AND FEEDSTUFF

Receipts past week 1916 tons as compared with 797 previous week. Arrivals have been heavier because of 1000 tons shipped to the U. S. government transports for Panama and brought in direct from country storage. General business has been good. Export and coast shipping have improved, with prospects excellent. Interior trading has been quiet; excellent weather conditions have called all hands to field work and marketing has been neglected. Alfalfa has been unchanged but in better demand and several sizable sales have been reported from Bay counties for shipment to the south. The serious effect of the dairy situation upon alfalfa has been a source of concern. An active movement of interior dairymen and the report today of the close of the retail dairy fight and a return to former milk prices in San Francisco is a most encouraging sign to the alfalfa producer. It would seem as though a cooperative connection between producing and distributing dairies with prices fixed based upon cost of production is a vital necessity now and requires the thought and attention of all interested in dairy or alfalfa industries.

**We quote today wholesale prices in carload lots as appear from dealers' transfers upon the market in San Francisco (for prices to consumers, charges for switching, cartage, commission and handling expenses must be added according to conditions.) Transportation bad, scarcity and high prices for spot.**

### GRAIN

Prices S. F. Grain Exchange, December 4, f. o. b. S. F. warehouse and storage charges paid.

Wheat: Mill, 2.20@2.30; feed, 2.20@2.25.

Barley Feed, 1.45@1.47½; shipping 1.50@1.52½.

Oats: 1.60@1.75.

Corn: Colored Milo, 1.80@1.90; No. 2, bulk, 1.80@1.85; No. 2 Eastern Yellow, 1.80@1.82.

## Citrus Markets

Los Angeles, December 6, 1922.

Car shortage is holding back shipments. Central California has shipped little more than half of last year's output to same date. Sizes are running large. Sales delivered are around 5.50 to 7.50 for Navels. Most of fruit meets "8-1 test."

Lemon market is easier but still remarkably good.

### Shipments

Shipments of citrus fruit to date since November 1, 1922:

Southern California, oranges, 762 cars; lemons, 391; total 1,153. To same date last season, oranges, 479; lemons, 412; total, 891.

Central California, oranges, 1,450; lemons, 39; total, 1,489. To same date last season, oranges, 1,792; lemons, 12; total, 1,804.

Northern California, oranges, 137; lemons, 11; total, 148. To same date last season, oranges, 172, lemons, 2; total, 174.

### AT THE AUCTIONS

**December 1**

New York: 5 Val., 1 Ariz. Nav. 2.50@7.25. Ariz. Nav. 5.80.

Boston: 7 Val., 1 lem. Val. 1.30@3.80, lem. 6.65@7.75.

**December 4**

New York: 8 Val., 2 Nav., 1 lem. Val. 1.80@10.90, Nav. 4.25@7.75, lem. 5.40@10.70.

Boston: 9 Val., 1 Nav., 2 lem. Val. 2.00@5.60, Nav. 3.40@4.75, lem. 6.75@10.05.

Pittsburg: 1 Val., 1 lem. Val. 2.65@3.70, lem. 3.45@6.55.

Philadelphia: 2 lem. 3.10@6.90.

## Snappy Notes on Livestock

**By A. L. Spellmeyer**

All that I can do is to convey to the Cultivator readers my impression of market prices. I am a registered bonded commission man operating on a stockyard under national control and limited in giving market prices that might affect tendencies. All I could do in that line would be to repeat the federal-state report, but nothing prevents me from interpreting them in language you can understand.

If you want to buy or sell a bunch of thin northern Arizona feeder steers you can figure them on a basis of 5 cents for the south stuff and 5.50 for the north. 3½ for fair cows. If you are dealing in half fat northern steers you can figure them on a 6.50 basis. Contracts are offered in 60 days on a 8.50 basis for top cattle, steers 1200 pounds deep and good loins. We have either the rottenest market in the U. S. A. or the best in prospect for everything goes here, from yards sales of three head to future contracting.

California has now sure shot grass and an established beef price around 8 cents for steers fat and around 6 for fat cows. The Bliss interests have entered the local field and things are going to hum, for this party is reported to prefer a half carcass customer to a ten carcass regular, and he is a go-getter who will make the peddler killers whip up. With his advent in both ordinary and quality markets something is doing, and one can with fair safety bid farewell to some of this 8 cent carcass stuff that has been bleeding the market and preventing a fair price to producers because the packers couldn't stand a raise and meet the market on the dressed beef.

The shortest sighted men in this world ar e the men who have range and who can borrow money and are keeping off of these 5.50 grass steers that won't cost them over $42 and will turn this year at over $70 in all probability. The feeders of high priced ration have a different problem and they can't crack these light cattle like the grass men, for unless a steer weighs 900 pounds and is in fair flesh to start, the feed price, even with two cents spread, puts them beyond the pale.

Hogs declined during the last week or so from 11 cents to around 9 cents and it's a bad drop. The stockyards prices don't interest sheep men for the expense and they sell f. o. b. range, except for the few that straggle in. The feeder market as a definite established fact doesn't yet exist. Bus service doesn't exist either, hence many buyers can't find the stockyards unless they hire a taxi, and that bars many of them. It's up to the stockyards company.

Every prospect shows things will better soon, for they can't get much worse for the ordinary southwest producer. Comparison shows Los Angeles in the van on prices as reported and California has today green grass in the winter.—A. L. S.

## PEDIGREED COCKEREL SALE AT TULARE

Thinking that your readers would be interested in the results of our pedigreed cockerel sale held at Tulare, this county, November 22, I am sending you the following report which I trust you will find space to use. The consignments were from some of the most prominent breeders all over the Pacific Coast, among them the agricultural college of Oregon.

There were 45 pedigreed birds sold for a total of $1217, making an average of $27.044 per bird. Forty of these birds were White Leghorns and the sale average was $26.112. Five were Barred Rocks and averaged $43.50. The highest price paid was $92.50 for a White Leghorn and the lowest, $7.50, also for a White Leghorn. The highest price paid for a Rock was $70 and the lowest $30. A peculiar feature of the Rock sale was that Mrs. Kleinsmith's bird, Catalogue No. 17, outsold the son of K-24, the world's record hen from Oregon agricultural college. Frank Penn of the Golden Rule Poultry Farm, which specializes in show birds, figured this bird good enough to mate with his blue ribbon winners and he would have paid a long price rather than lose him.

With the exception of a few birds everything went to small poultry men of the valley and mostly of Tulare County.

As an example of the interest shown in high egg record birds as compared with birds without actual egg records we give you this. After the pedigreed birds were sold 17 of the best non-record birds which could be obtained were sold under the same conditions and brought an average of only $5.94. —Poultry Department Tulare County Farm Bureau, W. B. Roby, chairman.

## GREATER QUARANTINE EFFICIENCY OR REDUCTION IN FRUIT QUALITY AND QUANTITY

(Continued from Page 603.)

coast I determined during a trip to the Atlantic coast, made a few months ago, to observe methods of control there. My first stop was in Boston. Boston is the greatest cotton receiving port in the world. And contrary to the belief of some of us Americans, thousands of tons of foreign cotton are received at that port every month. This comes from Egypt, India and a number of South American ports. The awful losses to the cotton industry of the South because of the introduction of the pink worm and cotton boll weevil have been so great that while there has been no cotton produced in the neighborhood of Boston the most rigid regulations are enforced in order to prevent introduction of any pests of the cotton plant. To that end every bale of cotton that comes from a foreign country has thorough treatment in a vacuum fumigator. This is done under direction of an agent of the department of agriculture, but the actual work is performed by a private corporation, and the cost is borne by the importer. These fumigation costs are in the neighborhood of $3 per bale and the importer naturally rebels.

In appealing for greater efficiency I would not be understood as making suggestion that present methods are inefficient, but I do feel that present methods should be extended and every possible avenue open to pest introduction should be guarded by a larger force than is possible with the present lack of understanding on the part of taxpayers.

The next most important receiving port is New York. The same method of vacuum fumigation is followed, and every bale of cotton goes through the fumigator. On the other hand, a day spent along the water front where the fruit laden ships discharge their cargos gave me the impression that fruits of all kinds from all lands were given freest admittance without any adequate effort at inspection. Quarantine Official Shaw felt at that time that more efficient quarantine would not be possible under present conditions. A campaign of education would be necessary before the greater trade interests would consent to any radical control measures. It seemed to me that the interests of millions of food producers and ultimately of food consumers were being jeopardized in order that a very few hundreds of importers might reap immediate benefit. The West, or rather, all producers of foods, should unite in demanding more drastic regulations and efficiency in their enforcement.

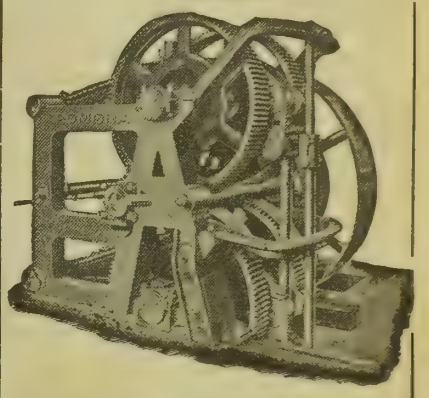
At both Boston and New York the work is entirely in the hands of federal officials. In Florida there is cooperation of federal and state officials all under the direction of Wilmon Newell of Gainsville. Mr. Benton, in charge of the work in New Orleans, is bending his greater energies toward the interception of the black fly which is feared because of its existence in the West Indies and other tropical fruit producing districts. Mr. Willis is engaged in a wonderfully interesting work of watching imports of cotton, or rather, watching to prevent the crossing of the line of cars which have been used in transporting cotton or cottonseed in Mexico. He has charge of the biggest fumigating plant in the world. It has a capacity of 15 large size freight cars at one fumigation. His work and that of Mr. Benton have sufficient interest for a story in the Cultivator another week.

BUY CHRISTMAS SEALS

Buy liberally of Christmas Seals. They cost a penny each. The fund raised will prevent much of disease and save many lives.

The Tuberculosis Association writes:

The money raised is spent exclusively in this territory for combating this most dreaded disease and the organization is recognized as run on a high businesslike basis with the maximum amount of money raised going directly into relief work.



THE POMONA

Duplex Plunger Deep Well Pumps

are solving the pumping problems for many users during the period of low water levels. They will lift the water to the surface, and, if desired, deliver it to high elevations above ground and at lower power cost than any other system of pumping water.

# "ALL My 250 Stark Trees Planted in 1920 Bore 20 to 80 Big Apples Each in 1922!"

THE big photo below shows Mr. Chas. Riedenbaker of Burlington Co., **NEW JERSEY,** and one of those 250 Stark's Golden Delicious trees planted in 1920.

This man bought several acres of poor stump land that wasn't "worth a nickel an acre," so everyone said. Planted to Stark Trees it is yielding him riches, has helped him raise his big family in comfort and fatten his bank account year by year.

Speaking of his Stark's Golden Delicious, he declares: "The trees are very hardy and rapid growers. I never knew of any other apple that bore so young and had such heavy crops. It is the best apple grown—very large, fine color, exquisite flavor."

In **CALIFORNIA,** especially, this variety has astonished all who planted it. Frank Wingard, Orange Cove., **CALIF.,** reports: "My 2-year-old Stark's Golden Delicious has 128 apples on it!"

And L. A. Klein, Stent, **CALIF.,** declares:—"My Stark's Golden Delicious bore 18 apples this year, when only 2 years old. It has made simply marvelous growth, also."

## "The BIG apple with the glowing golden skin"

—that is the title the big growers and buyers are giving it. It is unquestionably the most radiantly beautiful golden apple ever produced. Even Silas Wilson, the big **IDAHO** grower, declares:—"**All the Big** Eastern fruit buyers say it is the finest, showiest apple they ever saw!"

It averages about **50 per cent larger than Grimes Golden**—immeasurably better than Grimes in flavor and far superior to it in **keeping quality—keeps 4 months longer.** Its crisp, tender, creamy-yellow flesh is blessed with a spicy, aromatic flavor savoring of a particularly fine, perfectly ripe pear—completely **saturated** with exquisite, spicy-honey juice. Firm. Very Late Keeper.

The trees that bear this remarkable fruit are amazing fruit growers everywhere—all up and down the Pacific Slope.

J. P. Leaf, the well-known Kirkland, **WASH.,** fruit grower, says:—"Stark's Golden Delicious is far ahead of any other variety I have—in young bearing, heavy bearing, healthfulness and thriftiness. It is really **a wonder apple!** They bore at 3 yrs. One has 42 pounds of apples on it. Also a "regular sticker"—**the apples don't blow off."**

Beyond all doubt, it is now fair and just to declare—

# Stark's Golden Delicious

"Both Stark's Golden Delicious and Stark Delicious are free from all tree diseases and cankers."—E. RAY, No. Adams, Mass.

**—$— Salesmen Wanted** Good Pay Weekly Write us TO-DAY

The tree below is one of 250 Stark's Golden Delicious trees planted in 1920 in Chas. Riedenbaker's orchard, Burlington Co., N. J. **All bore big crops in 1922!**

## "The Wealth-Maker for America's New Fruit Grower Kings!"

Reports from every section of the states of California, Washington and Oregon indicate this to be a fact! R. K. McCobban, McCay, Oregon, reports:—"I find Stark's Golden Delicious trees very hardy and vigorous growing. Last year when trees were 2 years old, one bore 12 apples and the other 8 apples. This year, same trees: one bore 163 fine Stark's Golden Delicious and the other 142."

As an **EXTRA LONG KEEPER,** the Stark's Golden Delicious apple has proved itsel to Californians, the late Prof. J. C. Whitten, **California University,** Professor of Horticulture, wrote us last year:—"I have never eaten an apple out of storage this late (July 15th) which retained so fully its normal crisp, juicy condition."

# Shasta Already Storing Wealth for Next Summer

**Photo taken by Cultivator camera last day of October, 1922. In addition to the snows shown covering the summit the glacier which is on the opposite side of the mountain gives up during the summer months of its water for filling several of the streams which ultimately flow into the Sacramento. The height of Shasta, which is the peak farthest to the right, is 13,380 feet. It is thought that the peak to the left was formerly much the higher of the two, but in a heated argument with the forces in the interior of the earth it is hinted that at one time the entire summit of the mountain was blown off.**

Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertisers.

## EDITORIALETTES

The photo on the cover shows old Shasta after the first fall rain. It tells its own story both on the cover and in the fields of the upper Sacramento Valley where the waters from these snows will be delivered all of the summer.

* * *

This is the week of the cooperators' gathering at Washington. Representatives of all the cooperative marketing associations in the United States are invited to meet and discuss "Cooperative Financing and Rural Credits Legislation." "Common Problems of Cooperative Marketing Associations and How to Handle Them." "Common Problems of Each Commodity Group." "Cooperative Education of the Farmers and the Public." The hope is expressed that this convention will bring together the greatest number of cooperative associations yet secured. Californians on the organization committee are: H. G. Coykendall of the Prune and Apricot Growers; Aaron Sapiro, attorney councilor of several of California's cooperative organizations, and J. H. Barber, manager California Poultry Producers.

* * *

Regarding the aid to be given to agriculture by more complete cooperation Secretary Morgan of the organization committee writes: "We believe that the future of agriculture—and that means the future of the country—is bound up in the success of commodity marketing of farm products, and that this meeting of men and minds to hear the leaders, to exchange experiences and ideas, to discuss common problems with the representatives of other groups, will be the most constructive forward step in the history of cooperation."

* * *

With the installation of more powerful broadcasting stations and more efficient receivers there is perhaps greater interest than ever in radio. We will not say that there are as many claims for the impossible things which it was thought radio might do for us as there were, but there is more real and intelligent interest in the invention. Especial interest will doubtess be shown by farmers in the announcements made by the bureau of markets of the United States department of agriculture of the broadcasting of market reports. This will naturally increase as improvements of receiving sets are made. Fullest information as to market conditions is demanded by the farmer who would secure fullest return.

* * *

San Fernando Valley growers have in common with all other growers various weed pests to combat. This is serious enough in regard to those which grow within the boundaries of their own places. As part of the valley is within the city of Los Angeles the farmers are appealing to the city to "control weeds on city streets." As Los Angeles is about the last city on earth to admit weeds are growing on its streets we take it the request of the San Fernando Valley growers will be quickly granted.

## BE REASONABLE

Since the recent mine disaster there has been insistent demand for regulation and improvement of conditions to make impossible repetition of that horror in the mines of California. Some suggestions have been made which are so extreme that they would greatly cripple, if not entirely end, mining operations in the state. The Metal and Mineral Producers Association refers to the serious situation which will face the mining industry if hysteria is allowed to take the place of sane mining practices. It reviews the fatalities which have occurred in California by calling attention to the fact that "Gold mining in California is not hazardous. The records of fatalities in which fire figured show that in 1867 two were killed in the Ione mine at Grass Valley; in 1880 four were killed at the Goodshow mine at Bodie; in 1907 11 were killed in the Fremont mine at Dry Town and 47 were killed at the Argonaut mine this year. A total of 64 miners killed by fire since 1849."

## FARMERS CONVENTION

Wire from Sacramento: The largest state farmers convention ever held in California is in session in Sacramento. The first days dicussions deal excusively with transportation. High railway officials are attending from Chicago, Los Angeles and San Francisco. A score of delegates have come, appointed by governors of Oregon, Washington, Idaho, Utah, Colorado and Nevada; also Interstate Commerce Commissioner Campbell and others of Washington City.

State Director of Agriculture Hecke in his annual report said:

* * *

I want to say at the outset that this meeting was not called in order to criticize the carriers serving the Pacific Coast, or their representatives who may be in attendance at this meeting; as a matter of fact, we have cordially and earnestly invited the carriers to be present at these meetings in the hope that together we may be able to work out some satisfactory solution of a problem which seems to be growing more serious and acute each year. The transportation companies we believe are as vitally concerned in developing a method of relief as we are in proposing it.

Now take freight cars. In the five years ending with June 30, 1907, the number in service increased over 480,000. In the next five years it increased less than 230,000; in the 4½ years ending December 31, 1916, it increased only 114,000; and the five years ending with 1921 the number of freight cars in service actually declined 13,621.

While it is true that new locomotives were more powerful than those replaced, and while the new freight cars were of larger capacity than the old ones, nevertheless the increase in the total tractive power of locomotives was almost 60 per cent less in the five years ending in 1921 than in the five years ending with 1907, and the increase in the total capacity of freight cars was 85 per cent less with the five years ending 1921 than in the five years ending in 1907. On top of all this we have had a lack of construction of new lines and a corresponding decline in other facilities provided by the carriers little short of alarming. As President Markham said so aptly, "I have given these statistics not to show that there has been a decline, but to make it clear how much greater it has been than most people realize."

The Car Service Division of the American Railway Association reported the biggest car shortage in the history of the United States for the week ending October 15 when the railroads were unable to furnish some 156,000 freight cars for which shippers had made requisition. We all know that California and other Pacific Coast states by reason of their distance from the larger transportation centers of the country suffered proportionately greater than any other part of the country. As early as June and July the shippers recognized the imminence of a serious car shortage. During August and September the shortage became the real thing and it was during the latter part of the summer that the shippers meeting in San Francisco requested a committee to be sent to Washington, D. C., for the purpose of conferring with the Interstate Commerce Commission and the Car Service Division of the American Railway Association in order if possible to sesure some measure of relief. This committee was sent and I was selected to be the chairman. Mr. Cole of the California Fruit Exchange, Mr. McClymonds of the Western Pacific, and the secretaries of the Western Fruit Jobbers, International Apple Shippers and American Fruit and Vegetable Associations, also acted as members of this committee.

* * *

Railway officials ask forebearance of shippers and charge car shortage responsibility on Eastern roads. Thousands of apple and potato growers in Washington, Idaho and Colorado have been ruined because no cars are available for shipping. Crops now rotting. They demand something more satisfying than forebearance.

The transportation committee meets with delegates Dec. 13 and promises definite recommendations. Commissioner Campbell urges consideration of transportation from national standpoint, not that of Pacific Coast. Many urge that roads have failed and the government should own or control.—C. B. Messenger.

## THE SECRETARY REPORTS

The secretary of agriculture begins his annual report with: "If financial rewards were measured out in proportion to the results of honest, productive effort (unfortunately they are not always), the farmers of the nation would have little reason to complain of their returns this year. In contrast with various other groups of workers they have produced abundantly and without cessation. This year the acreage of the 14 principal crops is about 337,000,000 which is 7,000,000 acres above the ten year average, and but 1,000,000 acres below last year. Production of these 14 crops is estimated for this year to total about 265,000,000 tons, which is 11,000,000 tons above last year and above the ten year average. This great total is the result of long hours of hard work, aided by favorable weather conditions. If the relationship between prices now was such as existed before the war, this would be a prosperous year for agriculture, and consequently a prosperous year for the nation. With the distorted relationship of prices at the present time, the farmers, notwithstanding their hard work and large production, find themselves still laboring under a terrible disadvantage as compared with other groups. There is food in superabundance, and this contributes to the prosperity of business and industry for a time, but the inadequate return which the farmer is receiving, and has received for three years, inevitably must result in readjustments in the number of people on the farms and in the cities, which will not be for the continuing of the nation.

"There were substantial reductions in freight rates on farm products during the year, but rates stil remain far above pre-war levels and constitute a heavy burden on agriculture. In the case of some crops grown at considerable distance from the large consuming centers freight rates are now prohibitive or so nearly so as to make crop readjustments imperative. If this condition should continue industrial readjustments must follow, our manufacturing centers gradually being shifted westward toward the great agricultural surplus producing regions. In the case of some crops, notably fruits and vegetables, the higher freight rates tend to benefit eastern farmers at the expense of western and southern. In the case of the coarse grains and hay, however, the finished product of the western farmer is to some extent the raw material of the eastern farmer and the advance in freight rates hurts both.

"The cost of labor is one of the largest elements which determine the price the farmer must pay for what he buys, whether it be transportation, fuel, implements and machinery, clothing, or what not. The success of industrial labor in holding most of the gains in wages secured during the war period and the two years following accounts for a considerable part of the higher prices the farmer is now paying for what he buys. Wages of men working in organized industries, including transportation, remain at 50 to 100 per cent above pre-war levels and are perhaps within 10 per cent of the high level of 1920. These wages are carried into the price of the things produced. The farmer's income on the other hand is down to or below the pre-war level. The farmer benefits when there is full employment for labor and when wages are good, because the wage workers can then buy freely of farm products. There is a limit, however, beyond which consumption is not increased, and as wages advance beyond this point they add to the cost of the things the farmer must buy and thus increase his own cost of production without in any way enlarging the market for what he produces."

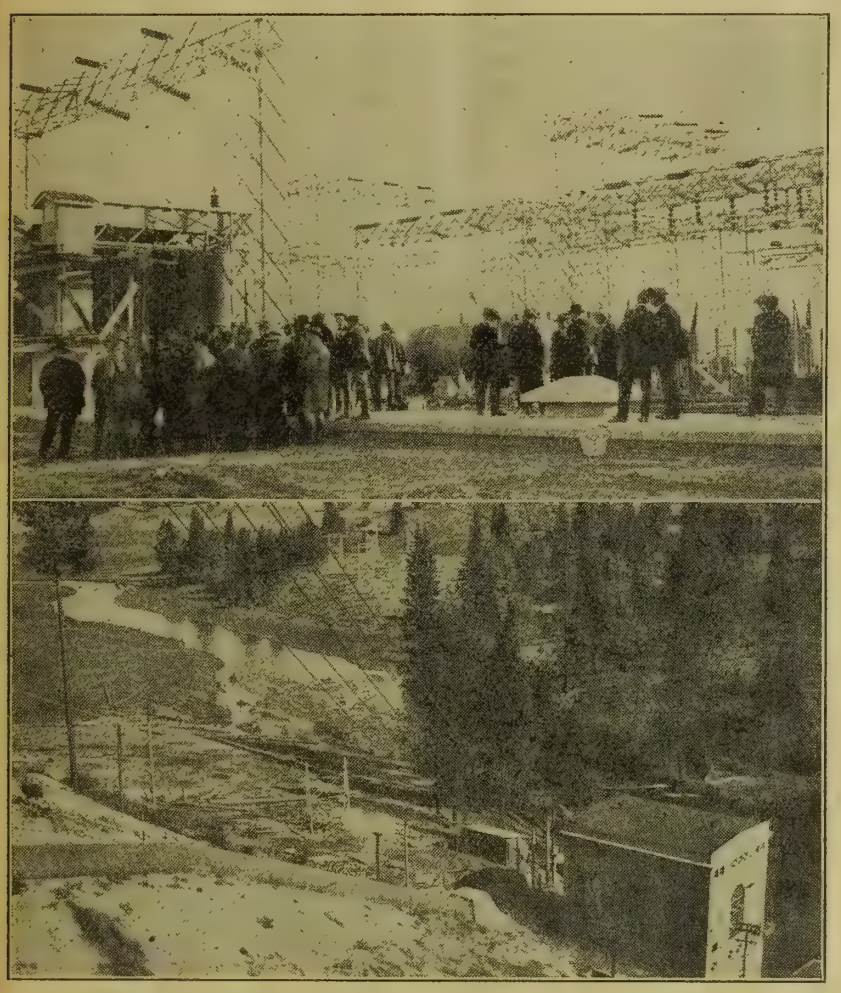
# The Riches in the Cascades and Sierra Nevada

By C. B. Messenger

UP where the snows fall, up where the waters leap over the cliffs, up where they make possible the kwh which lights and warms and moves things, we had a forceful and novel explanation as to what a kwh is.

The time was a beautiful late October evening. The place was in the Cascades of California, more particularly on the banks of the Pit River. The man was an electrical engineer, J. P. Jollyman. "We" were various Californians—possibly a hundred of us—up from the valleys where we had boasted long and loud of our golden grains and golden fruits. We had been told of the great wealth in the white coal of the Sierra Nevada and the Cascades. So we had come to see.



**Where Power and Light Are Made and Distributed**

The upper illustration shows a party of Californians inspecting the transformer station of the P. G. & E. between Dixon and Vacaville. The lower photograph is of the plant at the far end of the line. It is up on the slopes of Mt. Shasta more than 200 miles from the transformer station shown above. It is known as Hat Creek No. 2 Plant. Hat Creek is a tributary of the Pit River.

In order to see we first listened. Mr. Jollyman was talking. He told a lot of things—amongst them this:

"A kwh (kilowatt hour) is the amount of electrical energy required to take a 200 pound man at Sisson and lift him 2000 feet above the summit of Mount Shasta."

As we had left Sisson only a few hours before where we were told the altitude was some 3,550 feet, wound around the base of Shasta (stopping long enough for me to take that photograph on first cover page of this issue) which we know is 13,480 feet high, we had a fairly definite idea as to what a kilowatt hour is.

Then as to kva. The dictionary gives little comfort. Jollyman said "kva" means kilovolt amperes, which is the product of the voltage, or pressure, by the amperage, or quantity. Like water confined in a vertical pipe one must know its pressure and quantity to learn as to its economic worth.

I have spoken of the "Cascades of California." Lest some sharp eyed Cultivator reader who is also a reader of the "Gazetteer" over in the back part of the dictionary "calls" me because of claiming for California what the Gazetter says belongs to "Oregon, Washington and British Columbia," I must says the Cascades (like a lot of other things) start in California.

Mr. Peterson, one of our party, gave to us a world of information regarding these mountains. O. W. Peterson, engineer of general construction of the Pacific Gas and Electric Company, not only has wide experience and knowledge of electrical construction, but a great fund of information as to the rocks and rills and the trees which here arranged themselves along the eastern border of California.

From the San Ysidro Mountains on the southern boundary of the state to the Pit River solid granite was generally used in constructing the Sierra Nevada. Lassen, Shasta, and all to the north largely consist of lava formation.

This volcanic or lava formation increases the real value of the waters of the Cascades. Rather, the formation permits continued holding back of the waters. The constancy of the flow has long been noted. Springtime flood measurements are almost identical with those of late fall or the driest season of the year.

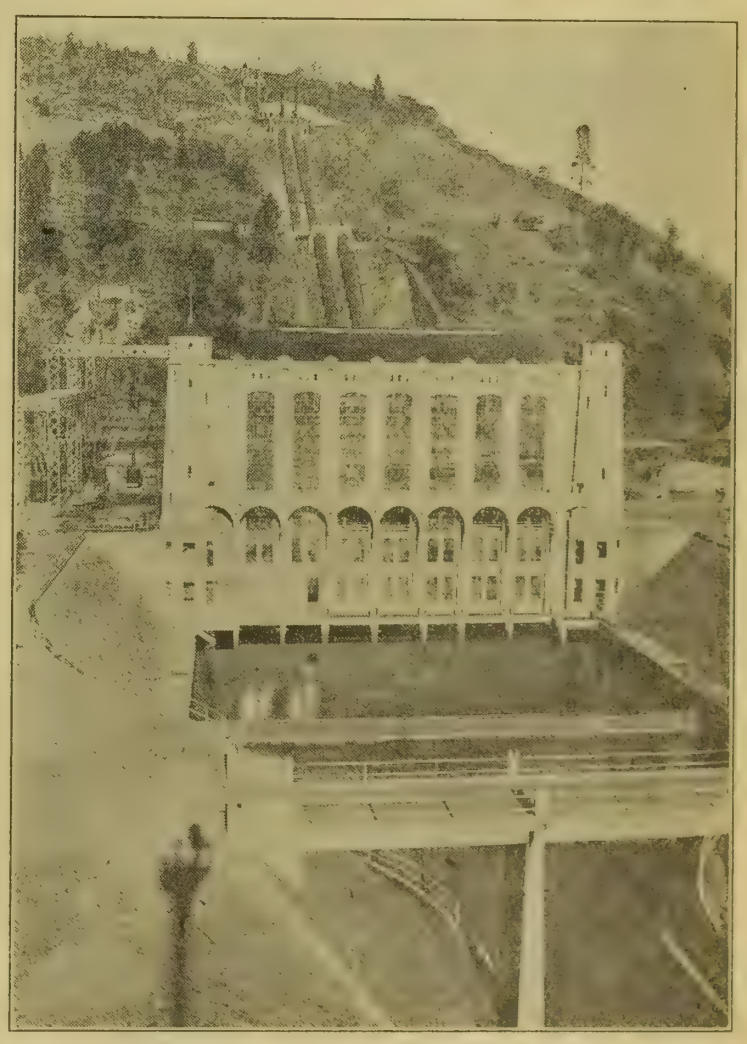
Our party was made up largely of farm bureau men and others who realize the need for greater use of the power which has since time began been wasted. There were presidents of farm bureaus, county agents, several of the faculty of U. C., and others. Luther Burbank, Prof. W. F. Durand of Stanford University, Warren H. McBryde of the California Hawaiian Sugar Company, all were greatly impressed by the magnitude of the installations and the efficiency shown in accomplishment.

Vice-president R. E. Fisher was in charge of our party, and he was ably assisted by F. A. Leach, also one of the vice-presidents of the company, O. W. Peterson, engineer of general construction, J. P. Jollyman, chief of division of hydro-electric and transmission engineering, and other live wires of the Pacific Gas & Electric Company.

The beneficial use which has been made of this water power by the Pacific Gas and Electric Company was made known to us through inspection of several of the plants on the Pit River and its tributaries.

The Pacific Gas & Electric people have plants extending from the Oregon line along the Sierra Nevada to the headquarters of the San Joaquin in Madera County. The greatest distribution system is in San Francisco though the Sacramento Valley and the northern end of the San Joaquin Valley are covered as are the south of San Francisco counties down to King City. The newer installations are those along the Pit River and the magnitude of the work can only be appreciated by inspection of some of these great plants.

Carrying the current from the generators 200 or 300 miles to the consumer calls for the construction of transmission lines that are a wonder to the layman. One item may be mentioned, that of copper wire. The biggest order ever given for copper wire was that of the Pacific Gas & Electric Company, seven million pounds. The line carrying the current from Pit River calls for seven cables of seven strands or 49 single wires. The cables are nearly one inch in diameter. These wires, if placed end to end, would girdle the world twice. It requires about two tons of copper for each mile, and the cost of the line is not far from $35,000 per mile. 204 miles from these plants on the Pit River is located the Vacaville-Dixon transformer station. The cables carry to this house the current with a voltage of 220,000. It is stepped down to 110,000 and from there distributed to other transformer stations located principally about San Francisco Bay.



**Dropping Pit River Down the Mountain Side**

Pit River No. 1 power generating plant. In the extreme upper part of the picture may be seen the surge chamber and beginnings of the pipe line which takes the waters of Fall River, which is one of the tributaries of the Pit River, after they have passed through a two mile tunnel and drops them to the great power house shown in the foreground.

# Agricultural News Notes of the Pacific Coast

## Northern California

Yuba County reports satisfactory results from tb. tests.

Plans are practically completed for the 1923 egg laying contest.

The Napa farm center has organized two poultry clubs. Egg laying contests are to be started.

Orland, Glenn County, shipped its first car of oranges of the season on Monday, November 27.

Sonoma County Indians predict cold winter because of "large crop of acorns" which is reported.

Pacific Pigeon Fanciers Club staged a most successful pigeon show at Idora Park near Oakland recently.

Nine cars of California grapes went into the ditch at Truckee. The grapes had been intended for export.

The California Almond Growers Exchange has purchased a bleaching machine for use at its Fairoaks packing house.

Kadota fig growers met recently at Orland, Glenn County, to discuss matter of cannery for handling output of fig orchards.

California Grape Growers Exchange is conducting a campaign for new members. It is directed by President E. M. Sheehan.

Sacramento Valley folks are getting together for a rousing good advertising campaign. Land colonization will be encouraged.

The board of supervisors of Butte County refused to make appropriation in financing the Orange and Olive Exposition.

The state highway between Grass Valley and Auburn has been opened. It is still necessary to make slight detour between Grass Valley and Forest Springs.

There was a large attendance at the gathering of fruit growers and farmers of California in annual state convention Sacramento, December 13, 14 and 15.

Over 50 fruit growers in the Winters district of Yolo County pooled orders for purchase of frost pots. Growers will also pool their orders for oil and storage tanks.

The shipments of turkeys from the Willows district of Glenn County for the Thanksgiving market amounted to 50,000 pounds. The larger part of the marketable birds are being reserved for the Christmas and New Year trade.

Weather bureaus have predicted frosts over much of the Sacramento and San Joaquin Valleys during the cool nights of the past week. As yet no seriously damaging frosts have come. Cloudiness has saved the day on several nights.

Prof. F. W. Woll of the University of California has been celebrating the 25th anniversary of the publication of his first book, "Testing Milk and Its Products." For a quarter of a century this has been a text book in dairy schools of this country.

The state highway under construction down Trinity River is completed as far as Don Juan Point, below Big Bar, where a bridge has to be built. Only three miles has to be finished to make way open to Humboldt County's highway system at Willow Creek.

## Central California

Fresno will have four large community Christmas trees.

Lindsay shipped 55 carloads of Navels on November 24.

There is proposal to erect a $150,000 condensery at Patterson, Stanislaus County.

Potato growers of Inyo County have adopted U. S. potato grades in marketing their potatoes.

Don Pedro dam will soon be completed. The power plant will begin operation about February 15.

The annual harvest festival of the Dinuba Grange was held December 9. Degrees were conferred on 40 candidates.

Fresno County farm bureau has begun drive for new members under direction of President B. E. Knapp of Sanger.

Settlers on the state land colony at Delhi have voted to dispose of tubercular reacting cows and to keep their herds clean.

Farm home department meetings in Stanislaus County at Patterson community club, December 18; Denair, 19; Mt. View, 20; Tegner, 21.

Four cattle rustlers have been apprehended in San Luis Obispo County. They are said to have run off cattle valued at more than $8,000.

The second annual Grape Institute to be held in Fresno under auspices of the Sun-Maid Growers will open January 17 for a three day session.

The fourteenth chamber of commerce in Fresno County was organized last week at Biola. A membership drive will be conducted immediately.

The Universal Milk Company has opened the Carpenter plant at Salida, Stanislaus County. Condensed and evaporated milk will be produced.

Farm center meetings will be held in Kern County at Mountain View, December 18; Pond, 20; Indian Wells Valley, 21; Rosedale, 22; Muroc, 22; Shafter, 25; Arvin, 29.

Fruit and vine pruning demonstrations were given in Stanislaus County last week by experts of the agricultural extension service cooperating with County Agent Jungerman.

Construction will start at once on four reinforced concrete bridges on the Visalia-Three Rivers highway. It will be necessary to close the sections of the highway where the bridges are being constructed.

The Sun-Maid Raisin Growers Association celebrated its tenth birthday on November 15 with massmeeting of growers at Fresno. During the ten years the annual raisin production has increased 70,000 to 225,000 tons.

A public demonstration in the pruning of orange trees will be given by W. R. Schoonover, extension specialist in citriculture of the University of California, on Saturday, December 23, beginning at 9 a. m., at Jasmine, Kern County.

Date of the 1923 Raisin Festival will be fixed at a chamber of commerce meeting on January 18. Inasmuch as April 30, 1923, falls on a Monday, which is not generally considered a satisfactory day, it has been suggested that the date be named as of the last Thursday of April each year.

## Southern California

The Escondido farm center has organized a poultry department.

Highland district shipped 20 carloads Navels the last week of November.

The winter gas war against squirrels has begun in Santa Barbara County.

A camp has been established at Westmoreland by the state highway commission.

First car of Navels went from Riverside, November 25; from Redlands, November 24.

Riverside and Orange County fruit shippers are interesting themselves in proposal to enlarge Newport harbor.

Ventura County receives $900 as share of national forest fund. This is applicable to road and school expenditures.

Picking of cotton in Coachella Valley will be finished about the middle of January. Market price has dropped to around 28 cents.

The Ontario-Cucamonga Fruit Exchange closes its 25th year with output of 1409 cars for which it received approximately $2,340,150.

Riverside supervisors are asking Imperial County to join in expense of maintaining quarantine inspectors at important points of entry along the Colorado.

A commercial pack of persimmons was put out by the Mission packing plant from the grove of Noel Curtis at Redlands. The persimmons are of the Hachiya variety.

Perris Valley has vot d to form a conservation district. The plan is to build ditches and reservoirs to sink flood waters of the San Jacinto into the Perris basin.

Piling is being driven along the Santa Ana River near the Auburndale bridge and a network of wire and brush will be added to prevent flood damage this winter.

The Fruitvale farm center has committee arranging for frost protection in Hemet Valley. An order is reported to have been placed for 42,000 heaters and arrangements are being made for oil storage.

As the state highway commission is considering the improvement of the highway between Santa Barbara and Ventura, the Carpinteria chamber of commerce is urging that the route over Ortega Hill be changed so as to go around the southern side of the hill to avoid heavy grade.

A permanent board of directors for the Orange County fair will be organized with three members from the farm bureau, three from the Santa Ana chamber of commerce, and one each from the county supervisors, Santa Ana city council and Federation of Women's Clubs of the county.

Riverside County and the state highway commission are in legal possession of the right-of-way for the state highway from San Bernardino to El Centro. Many property owners demanded what the supervisors considered excessive damages and under the law of eminent domain the improvement now is going ahead with compensation to property owners to be settled by the courts.

## The Coast and General

Yuma is now shipping winter peas.

The fourth annual Ogden Livestock Show will be held at Ogden, January 2 to 6, 1923.

Sheep are being shipped south from northern Arizona. Twenty carloads left Seligman, December 6.

Weather reporter at Douglas, Arizona, states that fine rains up to December 6 have put ranges in excellent condition for winter and cattle are in fine shape.

Several short staple gins will be established through the Salt River Valley of Arizona next season to accommodate extensive planting announced by many cotton growers.

Cotton picking in Arizona has been stopped by rains. Growers are hoping that the rain will open frost killed bolls and make it possible to complete picking at an early date.

Survey over Oak Creek road to Flagstaff, Arizona, is being made by engineers of the U. S. bureau of public roads. Coconino County is said to have provided funds for the survey.

During 1921 the value of American milk products exported from the United States to foreign countries amounted to more than $37,000,000, going to more than 28 foreign countries.

The Hawaiian Pineapple Company has purchased the island of Lanai which contains 150 square miles. The company will plant between 12,000 and 15,000 acres of pineapples and will continue to operate a 5,000 acre cattle ranch.

Production of cucumbers for manufacture is estimated at 2,619,480 bushels by the United States department of agriculture, a decrease of 42 per cent from the crop of 1921 for the same purpose. Long continued drouth is said to be the chief cause.

Arizona Good Roads Association will meet at Douglas, January 15. The question to be presented is: "Has Arizona reached the place in road building where temporary roads must give way to permanent construction, and a state road system take the place of haphazard county systems?"

The Blue Mountain Highway Association of Oregon is planning a road across the mountains to connect the Walla Walla and Grande Ronde Valleys. This road will shorten the distance by 74 mlies, opening a promising agricultural district. The present road is impassable six months of the year.

L. M. Estabrook, in the United States department of agriculture for 18 years and at present in charge of the division of crop and livestock estimates, has been selected by the Argentine government to reorganize the economic and statistical work of the department of agriculture in that country.

Production of commercial late onions is estimated at 24,074 cars of 500 bushels each by the United States department of agriculture. Yield in 1921 was 18,823 cars. Yield per acre is estimated at 309 bushels compared with 259 bushels last year. New York leads with crop of 4,476 cars; Ohio is next with 4,184 cars; Indiana, 3.473 cars; California, 3,262 cars; Massachusetts 2,508 cars: Michigan, 1,386 cars; Colorado, 1,067 cars; Minnesota 1,058 cars; Illinois, 750 cars.

# Pear Blight Control

By Leonard H. Day, University of California,
Before Pear Industry Conference, Berkeley

THIS disease is particularly difficult to control for the reason that it is caused by bacteria which are carried directly from tree to tree and branch to branch by various insects, and other mechanical agencies, and introduced thereby into the blossoms or into the bark of the tips of tender shoots. There is at present no known means of preventing the infection from getting into the tree because so many agencies are concerned in its spread. All pomaceous fruits, that is, pears, apples and quinces, are more or less susceptible to the disease. Some varieties of these fruits, however, are practically reistant. The disease has also been found to affect various other common plants but usually does not do severe injury to these. However, these plants may act as centers of in fection. Insects may carry the disease from the blossoms of these plants to the pomaceous fruits and thus bridge the gaps between distant orchards. The following plants have been found by various experimenters to harbor the disease; rose, prune, plum, cherry, almond, peach, apricot, crabapple, cotoneaster, hawthorne, service berry, mountain ash, red raspberry, blackberry, strawberry, loquat and California holly, or toyon.

There seems to be a direct relation between the vigor of the tree and the rate of development of the disease in the bark. The more vigorous the growth, the more easily infected and the more rapidly the infection travels in the bark. During the first rapid growth in the spring and early summer the disease may progress downward in an infected branch at the rate of several inches per day, but usually slows down to an inch or two per week from about June on. In many cases a large number of the in fections die out during the summer without causing great injury. This, however, varies from season to season and from one locality or climatic condition to another. Soil types and cultural practices may influence the nature of the tree growth and hence determine the severity of the attack. In older trees the disease is sometimes limited to younger growth and fruit spurs and dies out on reaching larger branches.

In early spring old blight cankers, known as "holdover" cankers, in the bark of both large and small branches, trunks and roots, will sometimes begin renewed activities, and drops of discolored sap will ooze out around the margins of the cankers. Insects may become contaminated with this bacteria laden sap, or ooze, and carry it to the blossoms. From the blossoms bees and other insects seeking the nectar will in turn become contami nated with the disease and spread it to other blossoms even to considerable distances. Though not many blossoms on each tree may thus become infected, yet each diseased blossom becomes a center of infection for other blossoms and tender shoots. The insect carriers are many. Ants, grass thrips, pear thrips, various plant bugs, squash bugs, stink bugs, tarnished plant bugs, plant lice, beetles and other insects may have their mouthparts infected from these diseased branches and blossoms and, puncturing the ends of tender healthy shoots, start many infections throughout the tree. These latter infections become evident by the wilting and blackening of the tender shoots towards the latter part of the blooming period or some days after the petals have fallen. It has also been found that rains will spatter the disease from the tops of the trees to blossoms and tender shoots and lea-es below.

After gaining entrance into the bark the bacteria multiply rapidly and after some days the disease may reach the larger branches, scaffolds or trunk. The disease advances mostly in the outer bark, but may finally penetrate inward and kill the cambium layer and thus cause the death of the parts above the infection. The parts of the tree below the infection will remain in per fect health. The leaves above the infection wilt and die and remain hanging to the branch. Both branch and leaves finally turn to the dark color characteristic of dead pear branches and leaves.

As intimated before, there is no known method of preventing insects and other agencies from scattering blight from tree to tree or from orchard to orchard during the time of blossoming. However, we can reduce the number of infections which would reach the main branches and trunks by a systematic cutting out of all blighted twigs and branches, and treating the cankers. We hope it will be possible to extend these experiments to the control of certain species of the most active insect carriers of blight. There may possibly be more promise in this than we can now foresee. In our present state of knowledge we cannot recommend keeping honey bees out of our pear orchards, for in many localities and in young pear orchards, especially, bees are needed for cross polli nation. Certain other fruits, notably cherry, plum, prune and almond, require bees, and we know it is impossible for the grower of these fruits to keep his bees on his own side of the fence. At most honey bees are not responsible for all of the blossom infections. There are many other nectar seeking insects which make constant visits to pear blossoms. Again, the greater part of our blight infections are in the twigs and second bloom after the regular blooming is over, and these certainly are not the direct result of bees. It may, however, he entirely true that if an orchard is free from holdover blight blossoms must first become infected from sources from without the orchard before blossom blight can take place in any large degree. Even granting this we have not proven that the honey bee is the only carrier of blight to the blossoms.

I wish to present the results of some experiments which I have been conducting during the past two years on the control of blight cankers on trunks and larger branches.

Dating back for nearly 20 years the pear orchardists have been stopping cankers and saving trunks and scaffolds by surgical methods in cases where the canker had not girdled the branch. The operation consists in cutting and scraping off the bark to the wood over the diseased area and to some distance beyond into healthy bark. If the canker has progressed clear around the trunk or scaffold the only recourse in this method is to re move the tree or scaffold as the case might be. This process, followed by disinfection and painting over the exposed wood, is quite successful. However, it is a tedious process and leaves large wounds which may never heal over or may become infected with wood rots before they heal over.

In the last few years there has developed among the growers in the Sacramento Valley a new method of treating pear blight cankers to save blighted trunks and scaffolds. The exact origin of this method I have not been able to trace definitely, but Mr. Hayward Reed of Sacramento was apparently the first to use it successfully in a large way. The method is based on the fact that the disease develops first in the outer bark and may affect large areas of the bark before penetrating inward and killing the cambium, and also from the fact that cankers often die without injuring the cambium, and that the branches then continue to grow as though nothing had happened to them. It was found that by shaving off the outer bark over the diseased area and for some dis tance beyond, and applying a disinfectant, that the disease would be checked in many cases and the branch saved even though the canker extended clear around the branch. Some growers were having good success with this method while many were not. We are calling this method "scarification."

These experiments, begun in May of last year (1921), were conducted in an attempt to find out why this scarification method was not uniformly successful and if possible to improve the method and make it more reliable. It was proposed to investigate the surgical operation itself and also to try several different disinfectants besides the cyanide and bichloride of mercury solution which was being used. It was conceived that if this method could be made thoroughly successful it would be very much superior to the older method. Under the old method many cankers were operated on and branches removed which would have cured themselves, because large numbers of the cankers do run their course and die out without ever injuring the cambium layer. With this new method the cambium could be saved under practically all cankers if these were detected early enough in their de velopment.

Watching the operation of blight workers using this scarification method, it was evident from the start that many operators either did not cut off the bark far enough beyond the disease area or else they did not pare deep enough over bark thickenings in crotches and around old scars and pits in the bark, also that many did not remove enough of the diseased tissues after shaving off the outer bark. Another defect which was apparent was the lack of penetration of the disinfectant which consisted of cyanide of mercury and bichloride of mercury, one part each to 500 parts of water. The water apparently evaporated so rapid ly that it did not have time to penetrate the scarified bark and carry the mercury disinfectants down to where living bacteria were still present. Nothing very definite was demonstrated last year but I am convinced from various observations made in the course of the experiments that a disinfectant could be developed which, following a thorough surgical operation, would be effective. Among other formulae tried was the addition of glycerine to the combination mercury solution. This material does not evaporate readily so that it was thought that it would have time to penetrate any diseased tissues remaining after the surgical operation. This material also sticks to the knife and shears and other tools like so much oil, and hence it is very effective in keeping these constantly disinfected. Theoretically, at least, it should also prevent immediate reinfection of the wound by ants or other insects. We find that insects infect wounds made in removing water shoots, pruning scars, etc. This material was used in a limited way last year but looked very promising. So this past spring it was tried out on a larger scale, and it gave almost perfect results both in my own experiments and in the hands of two growers to whom I had suggested its use early in the spring. A university student, Gus Gearson, who tried out quite a num ber of disinfectant formulas, got 100 per cent control with 17 cankers on which he used this glycerine-mercury solution as against only 33 per cent control with the usual water-mercury solution. I also got very good results with some other disinfectants, but since only a few cankers were used with each disinfectant, I should withhold judgment on these until they can be tried out more extensively. One of these, if it should prove effective after more thorough trial, will be especially desirable on account of being quite inexpensive, the glycerine-mercury disinfectant being relatively expensive. From the results of these experiments I am convinced that scarification is a practical method and can be successfully applied by any grower who will attend carefully to the details of the operation. A heavy knife with a long thin blade is about the best tool with which to perform the operation. Specially made scrapers are being used, but I believe the use of these leads to carelessness on the part of many operators. They fail to remove enough of the diseased tissues in narrow crotches and other inaccessible places. Scrapers may be necessary in old scaly bark.

The mercury glycerine combination disinfectant consists of the usual bichloride and cyanide of mercury, one part each to 500 parts of water and glycerine. This latter consists of one part water and three parts glycerine by volume. A paint brush is the best thing to use in applying this disinfectant.

Along with these scarification experiments just outlined I have also been trying to find a chemical means of treating cankers to do away with the more laborious cutting methods entirely, something that can be painted on with a brush or possibly applied with a small hand sprayer or atomizer. While I have not attained complete success along this line, yet some very promising leads have developed. Scores of disinfectants have been tested during the past two years and several of these offer some promise. One of these, zinc chloride, is probably the most promising of the materials yet tried, but since it has its limitations, and must be used with caution until we have found the exact proportions in which to use it, I would prefer that only those growers with whom I can work and assist shall experiment with its use. Apparently its penetration varies with different soil, climatic and seasonal changes and hence its effec

tiveness may vary. All these problems will have to be met before we can arrive at definite results with the material. Also it may have some undesirable property which has not yet developed. I wish it understood fully at the outset that this is a progress report on experiments now under way and not the finished product, that it is still in the experimental stage. However, the results so far secured are very promising and we have hopes that they will lead to much less laborious methods of treating pear blight cankers.

From June to September of the present year a total of 166 active cankers were treated with this material, and with the exception of two cases all stopped immediately. In all cases where the disease had not killed the cambium before treatment, the cambium was saved. However, in some of the experiments in which the zinc chloride was used in very concentrated form the cambium was killed under the diseased area, even where the disease had not injured it. I have high hopes that this material can be worked out to a practical conclusion. If it can there will be no occasion for going on with the scarification experiments. However, I am going on testing various other disinfectants.

These experiments were made possible through the generosity of the Earl Fruit Company in renting an eight acre orchard near Marysville, for the use of the University for pear blight experiments. This orchard had been so badly wrecked by blight that the owner had determined to remove the remaining trees and replant to peaches. We have the privilege of doing what we wish with these trees, so we have an excellent orchard for experimental work.

# The Alkali Problem

By W. S. Hall, B. Sc., E. M., A. I. M. E.

ALKALI is an increasing menace in California as it is in any other irrigated country not adequately drained by either natural or artificial methods.

The term "alkali" has been used loosely to include both sodium carbonate or "black" alkali and sodium sulphate, the "white" variety. It is also misapplied to certain salt lands, particularly in the coastal plain region, where it is distinctly a misnomer although some of the low lying lands may be afflicted with all three. In this connection it may be well to say that the term "sour" is often applied to soils that are in no sense acid as the expression would indicate.

Black alkali is easily identified by its greasy appearance and characteristic moist look. It is compact, lacks humus or vegetable matter, and in time of rain or heavy irrigation forms puddles and bogs. Such land usually sun cracks badly upon drying.

White alkali is characterized by a white crust or powder that forms on the surface or by a puffy, ash-like consistency. Common salt also causes a white crust but does not cause the puffiness. Taste is usually a good guide in the rough identification of the white incrustation. The white alkali tastes like "salts" while the common salt is easily recognized.

Salt grass, alkali weed, and ink weed are the three most readily recognized plants that will grow in the presence of black alkali, if it is not present in too great quantities to inhibit growth. White alkali usually collects in small patches and these patches gradually become bare and spread from year to year, particularly in a time of extended drouth or insufficient watering.

Alkali usually shows as spots in an otherwise fertile field, and these spots are not necessarily confined to the low lying swales. This condition usually puzzles the observer who is at a loss to explain the apparently irregular distribution of the affected areas. A recent drainage experiment in lower Los Angeles County gave a comprehensive answer to this question. A deep ditch was dug across a field in which there were several alkali spots. The sides of this ditch exposed a vertical section through the field that showed that the original land level consisted of hills or hummocks of clay soil. The valleys between these hummocks were later filled in with sand and loam, becoming in time a level plain. Where these clay hills came to the surface a patch of alkali appeared while the spots in between were free and fertile. The clay acted as a wick, bringing the alkaline waters to the surface by capillary attraction which could not be exerted by the sandy loam. There was no back drainage and the salts collected at the surface until the concentration reached a point inhibiting plant growth of any sort.

In the treatment of alkali soils there are two distinct problems. The first and most important is flocculation of the soil by the addition of some substance that will react with the alkali and put it in shape for removal by washing. Black alkali is comparatively insoluble in water and this, added to the fact that it causes compacting of the soil, makes a direct leaching and washing almost impossible. Neutralization may be accomplished by the use of sulphuric acid or gypsum. The former is expensive and dangerous to handle while the latter is cheap and safe and is readily applied. Much has been said concerning the top foot of soil. Analyses are based on this measurement; calculations are made involving huge tonnages representing this top foot as though it really meant something. This may be all right for shallow rooted crops and for the equally shallow arguments of the vendor of various alleged "cures" for alkali. As a matter of fact the effective treatment demands deep cultivation, frequent cultivation, and repeated cultivation. Gypsum is a neutralizer and flocculator combined, and if properly applied in sufficient quantities and followed by good cultivation will eliminate the black alkali. Its purpose, as stated above, is twofold. First, the conversion of the insoluble black alkali to a soluble salt, and second, the flocculation of the soil which makes drainage possible and stops the capillary action that pulls the dissolved salts back to the surface. This treatment presupposes the existence of sufficient drainage to carry off the dissolved salts. Should the water level rise to a point where the roots of the plants are submerged, then there is no answer except the creation of an artificial drainage scheme.

The problem of white alkali and salt is much simpler. Usually, no neutralization or flocculation is necessary, and the solution lies in the proper drainage and frequent and thorough washing of the affected areas. The end of all sodium salts existing as solutions is either the chloride or the sulphate, and these are, from their readily soluble nature and also from their flocculating properties, comparatively easy to remove by washing.

Determination of the amount of gypsum necessary for treatment of black alkali is a matter of some doubt. Soil analyses are, to speak conservatively, more or less a matter of chance. The proper sampling of a field is expensive and at best an approximation. The most feasible method is to apply gypsum liberally, say from two to four tons per acre, cultivate through one season before planting, and then judge future applications by the resulting crop. If the land is to be planted to trees or vines or other plants with a deep root system, dig out deep holes, mix the soil with approximately one-third its bulk of gypsum, and use the mixture for setting the plant. This is a rough method of using, but the results on some of the alkali infested soils have proven it to be effective, far cheaper, and just as reliable as the more elaborate and expensive tests based on soil analyses.

In conclusion it may be said that the use of gypsum is comparatively unknown in the extreme West. The schools and colleges with their usual conservatism hesitate to recommend it until they have proven conclusively its value. An elaborate test has been under way for some two years at one of the state institutions, but the men in charge withhold any statements concerning the tests until they have indisputable proof. The writer has been in intimate contact with tests conducted under widely varied conditions and does not hesitate to state that in every test conducted according to the methods outlined above the results have more than justified the expense and in all cases far exceeded the expectations of the men who made the effort.

# AMRAD

## "THE VOICE OF THE AIR"

BEAUTIFUL songs and gay dance music, daily news and educational lectures—all these can be yours if you want them!
For Amrad Radio reaches out into space and gives voice to the air. *Your* touch on the dial — and *yours* the thrill of hearing, with marvelous fidelity, the music of fine orchestras, church services, latest dances, glorious voices of great singers, market and agricultural reports.
These wonders — treasures of entertainment, business and education—simply await your wish to enjoy them.

## *The Glorious Gift for Christmas*

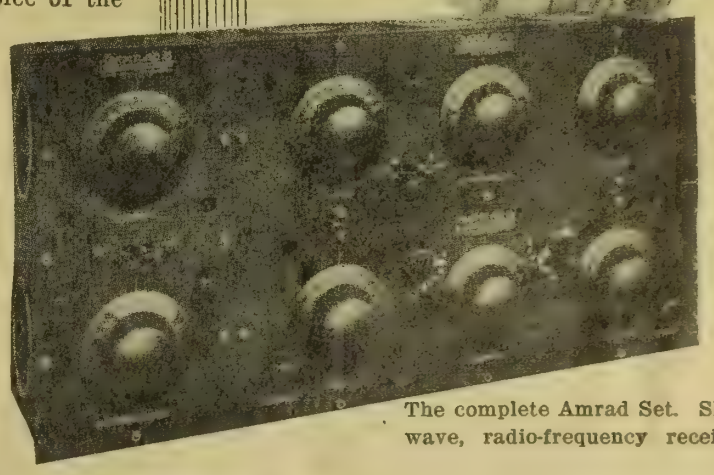
Amrad Radio Receiving Sets have been perfected by years of patient laboratory research — in which their ability to transmit the glories of Radio has been developed to the highest degree. Amrad range, tone quality and simplicity set the standards of Radio practice.
Certainly no finer gift can be imagined for Christmas. For when on cold bleak evenings, or starry winter nights, you listen to a beautiful song or entrancing dance measure, you do not hear an instrument reproduce. AMRAD gives you the **actual** voice of the singer—the **actual** music of the orchestra.

**Amrad Unit System**

*You need not start your Radio Set with the big Amrad Receiver. Commence, if you prefer, with a single Amrad unit, economical and complete in itself, but which may be added to like a sectional bookcase.*

Ideal short range Radio Receiving Set. The Amrad Crystal Receiver, with new MAGNETIC crystal detector.

AMRAD — pioneer in Radio — proves leadership with its unit system, in addition to large sets. Amrad Sets, COMPLETE and ready for service, range in price from $34.00 to $400.00.



The complete Amrad Set. Short wave, radio-frequency receiver.

# Taxation of Improvements

As every orchardist knows, fruit trees and vines just planted and up to bearing age are not assessed as "improvements." But on arrival at bearing age every county assessor is supposed to value and assess at "full cash value." The valuation varies with varieties of fruit according to their supposed profitableness. Technically the assessor expects his deputies to take into account, as the years go by, these values and depreciation, if any. This creates a rather serious situation in the assessor's office, especially with regard to subtropical fruits. The depreciation on subtropicals in a year when there is great loss from frosts may be very great. A Los Angeles County subscriber, whose loss of the present year's income was complete and whose loss because of freezing was perhaps 50 per cent of all living citrus trees, has asked the Cultivator as to his rights and possibility of redress. The deputy assessor apparently did not take into account his losses, and the increase in taxes over the preceding year was more than 100 per cent with no income whatever from the place with which to pay it. Naturally this is considered unjust by the taxpayer. Apparently it is impossible to secure reduction this year for the matter should have been taken up with the board of equalization which met last July.

However, we asked information from Assessor Ed W. Hopkins of Los Angeles County. Possibly the procedure is not identical in all counties but we believe there will be enough of information and interest in Mr. Hopkins' reply to give entire. One point which all orchardists and vineyardists should make sure of is that deputy assessor is fully informed as to the productive value of any "improvements." Then in case of doubt visit board of equalization in July.

Mr. Hopkins writes:

"It was the intention of this office in levying assessments for 1922 to allow a just depreciation on trees which might have been damaged by frost prior to the opening of the assessment season. While some trees were saved from damage by smudging or by reason of the fact that they were located outside the frost belt, it may be possible that the trees on the property to which you refer in your communication should have been allowed a certain depreciation for this year's assessment.

"As you have not furnished us with the legal description of this property, we are unable to locate the same on our records but we shall be pleased to give the matter our further attention when given the necessary information. If it is found that these trees were damaged by the January freeze the owner will be entitled to a refund of a portion of the taxes paid covering the improvement assessment if he will send us his receipted tax bill showing both installments of the 1922-23 tax to have been paid.

"Had the owner of this property appeared before the board of equalization during its session the first two weeks in July any adjustment found to have been necessary could have been taken care of at that time prior to the tax payment. However, no redress can be offered him at this time until he has paid both installments of the tax.

"The board of equalization, whose next session will be between the first and third Mondays in July of 1923, will have authority at that time to act upon only the assessments of next year."

# Citrus Growers Can Turn Waste Into Profit

Great numbers of bruised, undersized or oversized oranges, grapefruit and lemons go to waste in the growing districts annually. The bureau of chemistry of the United States department of agriculture has investigated methods of preparing several excellent food products from such fruit, which can then be disposed of at a profit to the grower.

Department Circular 232, By-Products from Citrus Fruits, by E. M. Chace, chemist, gives directions for the commercial manufacture of grapefruit juice, orange vinegar, citrate of lime, candied grapefruit and orange peel, marmalades of various kinds, jellies and butters. Most of these recipes are in sufficiently simple form to be understood and used by any housekeeper.

Grapefruit juice is a favorite among the refreshing fruit juices on the market. It is not as well suited to home manufacture as other citrus by-products because certain expensive and cumbersome apparatus, including a press, a silver plated strainer and a pasteurizer are called for in the process. However, it should be possible to prepare grapefruit juice on a small scale in the home by means of utensils usually available.

Since vinegar made from oranges is quite as satisfactory as that made from apples, orange vinegar might well be substituted for apple vinegar in regions where many cull oranges would otherwise be wasted. Two processes are given in the circular, the slower of these could be applied in the home.

Citrate of lime is an article of commercial importance which can be made from cull lemons or limes by the ambitious grower who is able and willing to go to the trouble and expense of installing the necessary equipment.

Candied grapefruit and orange peel make excellent centers for chocolates and also serve as a substitute for citron in baking. Candied orange peel may be mixed with icings for cakes or with dough for cookies. It may also replace shredded coconut in homemade candies and fresh orange peel in marmalade. Many firms now use similar products instead of citron in making mincemeat. The circular gives recipes which have produced excellent peel in the laboratory.

Among many different ways of making grapefruit or orange marmalade, several have given excellent results. They consist with one exception of the clear strained juice combined with cooked peel. The exception is orange marmalade made by the three-day method with which many housekeepers are familiar. In this recipe the pulp is retained.

Bitter orange and grapefruit jelly are made in the same way as the marmalades without the peel and with slight variations in the proportion of sugar. Orange butter, especially with a small amount of pineapple pulp added, may be a new preserve to many people.

The circular may be obtained free upon application to the United States Department of Agriculture, Washington, D. C.

### GETTING READY FOR THE NATIONAL ORANGE SHOW

Thirty-five fruit growing communities have joined in entering an exhibit at the National Orange Show which will be held at San Bernardino February 16-26. This entry will contest for the lemon and orange sweepstakes of the exposition. The exhibit has been entered by the Mutual Orange Distributors and will occupy one entire side of the big fruit tent.

With the National Orange classic being held on its own grounds this year and with entries greater than in any previous year, R. H. Mack, general manager of the show, predicts unusual success for the citrus exhibition. Already the demand for space has made necessary an additional tent, and several of the largest regular exhibitors are still to be heard from.

"When Greek meets Greek." Both the sledge and the flanged roller rims are hardened drop forged steel.

TRUCK ROLLERS that LAST!

THE DRIVING WHEELS of the most powerful locomotives have forged steel rims.

The Truck Rollers of a track type tractor support the weight of the tractor and the flanges of rollers must withstand severe jars and side strains of side hill work and rough going.

On Best Tractors the flanged rims of truck rollers are drop forgings—nothing less—forged into shape under heavy steam hammers, from heated steel of special analysis. After being forged the rims are annealed, bored and reamed, then turned true on the outside tread. They are next shrunk on accurately machined hubs—being hardened at the same time—hardened to resist battering blows just as are the heads of first-class forged hammers or sledges.

The rollers, complete, are mounted on anti-friction bearings to insure easy running, bearings with seals to retain lubricant and to prevent entrance of sand and ruinous grit.

The truck rollers of Best Tractors run over tracks which are true and straight. Tracks are made from drop forged hardened links which have been accurately machined top and bottom and large hardened spools and pins at each joint contribute to the long life which may be expected from the tracks on Best Tractors.

## ASPARAGUS CULTURE

By Ernest Braunton

THE first thing to choose about asparagus culture is the soil. It should be loose and friable, preferably sandy. But whatever its texture it should be plowed very deep, as deep as possible. Some California growers have plowed a deep furrow and in the bottom placed a quantity of stable manure. This is not good practice as it places the plant food below the roots, whereas it should be slightly above. Planting may be done any time from December to April. The distance between rows has the greatest range of any vegetable grown in California, from four to eight feet. In the row the plants are spaced from 12 to 18 inches. The roots should be six inches deep in the furrow. All large plantings are done in furrows and are covered by turning soil back again in like manner. Water should be run down the rows as soon as planted to settle the soil about the roots.

Water and weeds are the two things to keep in mind throughout the year. Asparagus needs an abundance of the first and is very intolerant of the latter. In the Imperial Valley, where the finest asparagus is grown, the crop is irrigated every ten days during the hottest weather. Other sections may take their cue from this and irrigate as needed, but water is the chief factor in commercial success. In cultivating the rows are ridged as with potatoes and corn, but still deeper covering is needed if white asparagus is to be cut. For plant food nothing is better than barnyard manure and lots of it, for asparagus is a heavy feeder. In addition to stable manure nearly all growers use large quantities of commercial fertilizers, usually fed in two or three doses during the growing season, one of which is given after the cutting season is over, to stimulate and store vigor for the next spring crop.

So long as cutting is done, cut off everything that grows. After the harvest is over the plants should be kept growing vigorously and all the tops be allowed to grow so long as they are green and not diseased. The green leaves manufacture food until they begin to turn yellow, when they should be cut, and burned as a precautionary measure. Of course, if rust appears on the foliage it should be cut and burned at once. It may be best to cut out any canes that bear seeds as the seeds will fall and germinate and furnish a crop of young plants that are not needed. Down in the Imperial Valley one year old plants are preferred, but in most sections two year plants are most used as a marketable crop is certain the first year. Asparagus is not subject to many troubles outside the rust and that is very hard to control. For many years government experts have been at work selecting plants free from rust in beds where the plants in general are badly affected. It would seem that they have met with some measure of success, though none of the newly bred strains are immune. Last summer the writer visited the Jameson fields east of Ontario, where the latest and best government varieties were being tested, but all of them showed some rust. Perhaps in time they will win.

## AUCTIONING AN ORANGE GROVE

Tulare County is trying out a new plan which may be a forerunner of other like events. It is the placing of an orange grove on sale at auction. C. T. Hanson of Woodlake is to offer his place, consisting of 38 acres, to highest bidder on the afternoon of Thursday, December 21. Twelve acres of the place are planted to bearing Navels, six to bearing Marsh Seedless grapefruit, ten to bearing olives and a vineyard which will bear another year. Mr. Hanson writes:

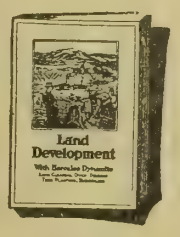
"The place is watered from the St. Johns River Mutual Water Company and 38 shares of water stock go with the place. The St. Johns is one of the best equipped water companies in the valley, has ample water for all land under its system, and the cost is low.

"The buildings consist of shop, barn and living compartments with bath and running water. A complete line of tools and implements, including tractor and a team to go with the place."

# Blast Between the Rows

You get the benefit of all your irrigation water when you subsoil with

## *HERCULES FARM DYNAMITE*



*Send for this book—It is free.*

Blast holes between the rows of your trees before irrigation and you'll pick fat, juicy oranges at the end of the season. Also, your land will retain moisture much longer during the hot weather.

Tree planting, blasting between the rows, ditching, stumping, boulder blasting—all the uses of dynamite on the farm are fully explained in "Land Development"—a 75-page book published by the Hercules Powder Co.

raise your own fruits

this catalog will help you

No doubt you have some ground around your home which is not producing.

Why not plant it with some good varieties of fruits and berries? You and your family will enjoy them, fresh, ripe and healthful—right from your own orchard and vines. It's a pleasure as well as an economy.

Of course, it is important that you select reliable nursery stock to avoid disappointment—The best is the cheapest in the end.

We sell direct to you—no delay in getting fresh trees and plants—they are all grown at our 400-acre nurseries—under the personal supervision of Mr. John S. Armstrong, whose 33 years of experience and reputation in California merits your consideration and confidence.

The 1923 Armstrong Nursery Catalog will give you helpful suggestions—it is beautifully illustrated and the best of each variety of fruits, flowers, shrub or ornamental plant is described fully.

Send for the catalog NOW—decide early—as to what you wish to plant. Planting season: January to April—our extensive yards are now brimful of trees and plants for your selection and shipment.

# Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Raw Potatoes for Cow Feed

Would you please publish milk value of raw potatoes when fed to cows? Do they cause bloating?—Subscriber, El Monte.

Raw potatoes have practically the same nutritive ratio as dry beet pulp but should be fed with care. Cooked potatoes can be fed up to 30 pounds daily, but raw the quantity should not be nearly so much. Raw potatoes contain a large amount of free starch which may cause bloat. Start with a small quantity and increase slowly until on full feed.

### Planting Walnut Orchard

I have about three acres I wish to put into walnut trees. Can you advise me as to best variety? I am in the San Fernando Valley near Burbank. If planted before the winter rains should they need watering next summer? I am told not.—Subscriber, Burbank.

The Placentia Perfection walnut is considered about the best for planting in Southern California and is more generally planted than any other variety, however the Ehrhardt has proven very satisfactory in the San Fernando Valley. With proper cultivation the winter rains will probably give the trees sufficient moisture but if irrigation water is available it would give the trees a better start to irrigate them occasionally during the first summer.

### Walnuts—Water Too Near Surface

I have about ten acres of good sandy loam soil that I wish to set out to walnuts, but as the water table is from eight to nine feet I am told walnuts will not do well. What does the Cultivator think about it? The soil never gets too wet to work and I can't see why walnuts should not do all right if given plenty of fertilizer and good cultivation.—Subscriber, Oxnard.

Walnuts will do well for a while under the conditions you mention but we are afraid that about the time the trees reach an age at which they should be really profitable they will begin to go back or deteriorate to such an extent that they would not produce profitable crops. While your soil may not appear too wet on top you will probably find, by digging down four or six feet that the sub-soil is so moist that the tree roots would hesitate to penetrate it. Walnuts root fairly deep where conditions are favorable and it is only under such conditions that they can be expected to produce maximum results.

### Pecans on Walnuts

Will pecans grow if grafted on walnuts or almonds?—Subscriber, Tulare.

They will not. Affinities must be sought. None but stone fruits or of the same group of the family may be grafted on almonds. Practically nothing but walnuts will grow on walnut stock. Pecans belong to the hickory family and will graft well on hickory stock. In fact, some claim it is superior to seedling pecan stock, and many wild hickory trees in Texas and elsewhere have been topworked to pecans.

### Gumming of Peach Trees

What is the best treatment for peach trees that are affected with excessive gumming breaking through the bark?—Subscriber, Sacramento.

The gumming of deciduous trees is one of the most perplexing problems of the orchardist. It is also one to which it is impossible to give any adequate answer in this department. There have been in this paper during the last five months several articles in which it has been referred to and treatment suggested. See first article by Leonard Coates, issue of July 29, page 104. See issue of August 12, page 153. A much more extended article given in the issue of September 9, page 261. In addition the same number has on page 263 comment by Mr. Wood. There is no effective spray or paint or method of pruning which will control this trouble. A sufficiency of moisture at the roots at all times with best of soil treatment seems to afford the only suggestion.

**Rooted Vines and Cuttings**

### Grafting Black Walnuts

Please inform me through the Cultivator if I can graft black walnut seedlings next February or March, if I am going to move them now from the seed bed into nursery rows. The seedlings were planted last spring.—Subscriber, Los Angeles.

You should have planted your black walnut seed in the nursery row and not in a seed bed. It could have then been grafted in February of this year. but we do not think you will get satisfactory results now unless you allow the seedlings to grow another year after transplanting before attempting to graft them. It might be possible to bench graft this stock; that is, do your grafting as the seedlings are taken out of the seed bed, and then plant them in nursery row, as is sometimes done with apples, pears, etc., but we question whether you would make a success of handling them in this way.

### Tamarisk Hedge

Please advise me as to evergreen tamarisk for hedge or windbreak. Will it thrive in this locality, near Monterey Bay? Where may cuttings be obtained?—Subscriber, Watsonville.

Tamarix articulata, the evergreen tamarisk, has grown well wherever tried so far as we know. It is growing well in San Fernando Valley and near coast 20 miles oceanward from there. Cuttings are advertised by nurserymen in the Cultivator.

### Federal Farm Loans

Please tell us about the Federal Loan Bank system, and give us the address of the one nearest Santa Rosa.—Subscriber, Santa Rosa.

Write Federal Farm Loan Bank, Berkeley, and the bank will probably refer you to your nearest Federal Farm Loan Association through which you may make application for loan.

### Pasteurized Milk

I want to ask a few questions regarding milk. After milk has been pasteurized as the state law requires, should there be as much of a cream line showing as in the raw milk? Which milk would you recommend for young children and babies, raw milk from the tb. tested cows or the pasteurized? Does not pasteurizing the milk take out bone making material that is very essential for babies and children? I would like to have some comparisons, valuing milk pound for pound with such foods as eggs, meat, potatoes, beans and bread.—Subscriber, Arroyo Grande.

The best information as to the above questions might be had by a study of "Newer Knowledge of Nutrition" by Prof. E. V. McCollum of Columbia University. We may say in a word, however, that the value of pasteurized milk depends largely upon the pasteurization. Prof. McCollum reports a case where children were fed on milk pasteurized at 165 degrees for 30 minutes for a period of two years, later on similar milk pasteurized at 145 degrees for 30 minutes. Where the milk pasteurized at 165 degrees was used there were occasional cases of scurvy. This entirely disappeared when the 145 degree milk was fed. Presumably at the present time there is no milk being pasteurized at a temperature as high as 165. "Certified," "Guaranteed," "Grade A Raw" are not pasteurized, and these milks sell often at double the price of pasteurized milk. This makes it fairly evident that the consumer as a rule prefers the raw milk. Its production calls for exceptional attention to cleanliness and health of animals and attendants. It is known that prolonged boiling entirely destroys the more beneficial elements in pure milk. Pasteurization should not affect the amount of cream, neither will it lessen the lime or bone making material. The loss from heating is because of destruction of vitamins or "Fat soluble A" or whatever may be the illusive quality which we know is contained in pure raw milk. Farmers bulletin, 1207, "Milk and its Uses in the Home" published by the U. S. department of agriculture, Washington, D. C., states: "One quart of milk contains as much protein as 7 ounces sirloin steak, 6 ounces round steak, 8.6 ounces of fowl, 4.3 eggs. In energy value the proportion is still greater in favor of milk.

### License for Testing

I wish to inquire about a milk and cream testers license. What is it and do testers for cow testing associations require one? Do you believe that records of grade cows made by licensed testers and sworn to be correct before a notary would carry as much effect as those made by farm bureau testers?—Subscriber, Imperial.

No license is required for testers unless employed by the university on official work. Testing associations are generally operated by the farm bureaus and outside associations are generally frowned upon, but there is no reason why tests made by a reliable man should not be given full value.

### Olives Soft

Am pickling olives by recipe given in the Cultivator a week or so ago. Have them through the two lye waters and in clear water two days. They have soft spots on them which raise and seem full of water. What is the cause and will it render them unfit to use? There has been some frost.—Subscriber, Acampo.

Your trouble is evidently due to either too strong a lye solution or allowing olives to stay in the solution too long. Are you quite sure that you followed the directions exactly with regard to the stock solution and the diluting of same for use on the olives? The soft spots will not render them unfit for consumption but will destroy their keeping qualities, and they will have to be used immediately. If fruit was damaged by frost these soft spots would be in evidence before treatment in the lye solution.

## OIL LIGHT BEATS ELECTRIC OR GAS

### BURNS 94% AIR

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. V. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

**The California Cultivator is only One Dollar Per Year.**

# ASK FOR POTASH

The present conditions in the business of the farmer and in the fertilizer industry call for serious thought. Both are going through a readjustment period, with its hardships and doubts.

The farmer may well ask whether he is using the most profitable fertilizer. The fertilizer salesman may well inquire whether he is selling the kind that will do the farmer the most good, and lead to larger sales in the future.

During the war America could not get Potash, and the use of acid phosphate increased. Central Europe could not get phosphates, and the use of Potash Salts increased. Today plenty of Potash can be had at less than pre-war prices. Now is the right time to restore the balance by using more Potash in the fertilizer formulas than the average amount used before, 5 to 10 per cent.

Crops take from the soil very much more Potash than phosphoric acid. On any soil where Potash has been profitable it is not unreasonable now to use at least as much Potash as phosphoric acid. Ask the fertilizer agent for prices on this kind of goods, and rebuild your soil while Potash is cheap.

Recently it has been shown that a lack of available magnesia causes serious injury to important crops on some soils. German Kainit and Manure Salts furnish this soluble magnesia without extra cost.

### THE BULLIEST FRUIT OF THEM ALL

Seems like I'm crazy for apples—
  Been without any so long;
Now that it's time for the fruit to be prime,
  Say, I just burst into song.

Other fruit's good in its season,
  But, ah, how I welcome the fall,
That part of the year when apples are here,
  The bulliest fruit of them all.

There's a tang to the taste of an apple,
  A zest like the keen autumn breeze,
With a savor that's won from the smile of the sun
  When it ripened the fruit on the trees.

Oh, I've hungered and thirsted for apples,
  With the appetite keen of a boy,
And the season which brings in this viand of kings,
  For me is a season of joy.

For autumn means rosy cheeked apples,
  And apples mean cider and pie,
And dumplings and such, which you can't praise too much,
  No matter how hard you may try.

So here's to his Highness, the Apple,
  Who comes with the crispness of fall,
When my palate's athrill as I take in my fill
  Of the Bulliest Fruit of Them All!

—Unknown.

### THE GOOSE, THE POET AND THE PRINCESS

By Clara Peterson

ONCE upon a time there was a princess named Floria who did not care to smile. She was not sad, for she had nothing to be sad over except a splendid home and hundreds of dresses and piles of delightful books to read. However, it was fun to be sad continually and have everyone worry over her, so Floria was sad. Her father finally grew so worried over the matter that he offered to let any really clever man marry Floria—that is, any man clever enough to make her laugh and to make her love him.

Floria had lips as red as currants and lovely pale brown eyes that matched her hair. She was tall and graceful too so princes and dukes and earls and barons came to see her and acted as silly as they could to make her laugh, but Floria would lift her pale brown eyebrows a trifle higher and go on reading.

One afternoon she was sitting under a chestnut tree sadly reading a joke book when a poet chanced to pass on the other side of the high white fence. Through an opening he caught the tiniest glimpse of Floria's pink dress but it was such a soft, cloudy, rosy color that the poet was interested at once and put his eye close to the opening. He stood there several minutes and when he looked away he was deeply, hopelessly in love with the princess—who had not even lifted her eyes.

The poet's companion was several yards down the road, catching flies. (The companion was none other than a large and beautiful white goose. The poet found him very satisfactory as he picked up his living along the road and whenever poems came fast and a new pen was needed it was only necessary to pluck a quill feather from the companion.)

"I think we'll stop right in this village, Honkie," said the poet, catching up to his companion who had just caught a grasshopper. "Let's waddle around and find the cheapest inn."

The cheapest inn was the first one they reached so they came back to it after wandering through the city and the poet went immediately to his attic room while his companion took a swim in the watering trough. (The poet had come down again though for a new pen.) It was a pleasant afternoon altogether for the goose, but as for the poet, he sat till sundown with a clean sheet of paper before him, biting his pen, for he could think of no words lovely enough for the princess. It is only fair to say that he was a very bad poet though he was a very good man and a handsome one, too.

"Oh, fair one, sitting in the shade!" the poet had written but that was absolutely as far as he could get. The only word he could think of to rhyme with shade was marmalade and after writing marmalade several times with curlicues and spirals to see whether it could by any means look romantic, the poet pushed back his chair angrily. Not till then did he realize how extremely empty his stomach was.

"Oh, ho! So that's the trouble!" said the poet to himself, and he sent down immediately for one large raisin bun and one small pot of gooseberry jam. When he had eaten the last crumb he wrote quickly.

"Oh, fair one sitting in the shade,
My heart would speak, yet 'tis afraid.
Your eyes of shining—(brown or blue?)
Have brought me close, beloved, to you!"

The third line troubled the poet but he thought perhaps the princess wouldn't notice so he carefully enclosed the poem in an envelope, sealed it with several kisses and sent it to the palace.

There was no answer. In fact, the princess went to sleep before she reached the last line for it was a lazy evening and she had gotten up early to send away two lords and a prime minister. The poet waited sadly all the next day. Then he decided to show the princess in a different way how very much she meant to him.

On Monday he sent her pink arbutus in a basket, hoping she would know that the tiny flower meant, "Thee only do I love."

Tuesday he sent yellow jasmine flowers tied with a lavender bow, for they meant elegance and grace.

Wednesday he sent blue violets for faithfulness—and then his last coin was spent.

Honkie, the goose, found so much to eat down in the grain fields and around the kitchen door that he never thought of his master being hungry. The poet got paler and paler and on Friday the goose thought to himself, "He must be thinking up an awfully hard poem this time. I wish I could help him."

Just as he thought this, waddling along in the dust, he saw ahead of him a bright silver piece. He immediately picked it up and carried it to the poet. Perhaps it would make his master smile.

The poet was lying on the bed. There had been no answer from the princess. (She had been away from home three days and the bouquets had gone to the cook). The poet turned his dark head wearily and looked at Honkie. His eyes grew brighter as he saw the coin and he said quite happily.

"I wish that with it you would go to the shop and buy something for the princess; my last gift, and yours too, Honkie. Get something beautiful and white—like her."

Now of course the poet meant that Honkie was to go to the flower shop but as he didn't say that, the goose waddled serenely past all the stores looking for something beautiful and white.

In the first butcher shop hung a delicious leg of veal, but Honkie was afraid it was not quite white enough so he passed on.

Farther on was a great whitewash

Gifts that render service

"Coffee, Walt? Toast?"

"Yes, thanks. I will have some more, since it is no trouble at all for you to get it."

Can't you hear just such a dialogue between a couple who have received such time-and labor-saving presents as an electric percolator and an electric toaster? Wouldn't you feel good, if you had given them one of these or an equally *convenient* and *useful* electrical present for Christmas?

*Christmas is almost here.* You must act quickly. Go to the nearest dealer in electrical appliances. *Select serviceable electrical appliances for the friends and relatives whom you have not yet remembered.*

## Don't neglect a Cold

**Dangerous sickness often starts with a cold. Ward off your colds with Musterole before pneumonia starts.**

Musterole is a clean, white ointment made with oil of mustard. It has all the healing properties of the old-fashioned mustard plaster but none of the unpleasant features.

Musterole is not messy to apply and without the blister.

At the first sneeze or sniffle take down the little white jar of Musterole from the bathroom shelf and rub the ointment gently over the congested spot.

With a tingling warmth it penetrates the skin and goes right down to the seat of trouble.

Rheumatism, tonsillitis, lumbago, coughs and colds are all symptoms that call for Musterole.

Order Musterole today from your druggist. 35c and 65c in jars and tubes; hospital size, $3.

tub which no one could say was not beautiful and just the thing for a swim. Honkie stood before it a long time as it looked like the most for his money but at last he happened to think that he never could get it to the palace so he strolled on.

Then he found just the thing! In a shoe shop window was an enormous pair of white bedroom slippers trimmed with lace. In a minute Honkie was inside the store.

"You are sure you haven't any larger ones," said the goose as the clerk tied the bundle. (Living with a poet had taught him always to get his money's worth.)

"These are the largest size made in any slipper," said the clerk gruffly—some people were such geese!

When the goose arrived at the palace gate, the gatekeeper looked him over curiously. Honkie was quite splendid in his red and white suit and his bundle looked interesting, but the gatekeeper shook his head.

"No pelicans, cormorants, terns, gulls, penguins, flamingos, ducks, or book agents allowed on these grounds!" he barked loudly and thought to himself, "I guess that will hold him. I've named everything with a bill."

All Honkie did was spread his wings and sail straight over the gate and through the spray of the fountains to where he saw the princess sitting. By the time she had looked up from the joke book he had the slippers unwrapped. He placed them carefully on the grass beside her tiny feet in their blue kid shoes.

"A present for you from the greatest poet in the world!" said Honkie loudly.

Floria looked down at the slippers lying there like flat white boats with railings of lace. She began to smile and in a moment she was screaming with laughter.

"You mustn't laugh," said Honkie, frowning. "They may shrink you know—or you feet may grow."

"Oh! oh! oh!" shrieked the princess till her father came running out rubbing his hands in delight at the sound.

Of course they sent at once for the poet who forgot all about being hungry and only looked the more interesting for being pale.

It all ended happily. The poet was extremely smart (except in poetry,) and he helped manage the kingdom while Floria destroyed every joke book in the palace and was happy ever after.

As for Honkie, he was given a suit like the gatekeeper's and not to this day has he let anything with a bill get past him.

### THE RAG DOLL'S CHRISTMAS

THERE was once a very, very old rag doll who lived in a nursery. She was so old that she had seen all the children grow up—the boy who wore trousers now, the girl who had her hair done in braids, the middlesized child who had so often left the rag doll out in the garden at night. There was only the baby left—bless his pink toes!

But the rag doll was very, very old, and one beautiful Christmas time she began to show her age.

Her hair had been combed so much that it had come out dreadfully, and her nose, from a great deal of kissing, was entirely gone. Her pretty pink cheeks had been washed away when the boy tried to teach her to swim in the bath tub, and all her clothes were very untidy indeed.

The baby never noticed all these things, but the toys did; they all made the most unkind remarks to the rag doll the day before Christmas.

"Look at your dirty face," said the large French doll. "You'll be put in the attic tonight. That's where the old dolls go." "Look at your dress," said the jumping jack. "It is all torn. I wouldn't walk across the nursery floor with you."

"Did you ever see such thin hair?" asked the hobby horse. "I thought my tail was thin, but it isn't to be compared with that!"

But just then the nursery door opened, and the Christmas Angel came in. You could be perfectly sure that it was the Christmas Angel even if she did have on a gingham apron, be-

# She Knows

## how to use left-over bread and make the farm hands like it

LOTS of bread was used on her table, but lots of it also was left over. She used to throw away a lot.

But now she knows what to do with it, for one day she found a recipe which told her how to use raisins in bread pudding.

It made "a new dish" of it. Men who didn't like plain "bread pudding" were delighted with the raisins and became enthusiasts.

### Raisin Bread Pudding

Three-fourths cup Sun-Maid Seeded Raisins, 2 eggs, ½ teaspoon salt, butter size of an egg, ½ cup sugar, cinnamon to taste, ½ large loaf of stale bread, 2 bananas or apples.

Soak the stale bread over night in water. When time to make the pudding press as much water as possible from the bread so that the bread is about the same consistency as dough, then take a fork and get all lumps out. Do not leave the crust if it cannot be mashed to the same consistency as the bread. Add well beaten eggs, salt and stir. Add raisins mixed with the butter. Put into dish in layers, covering each layer with sliced banana, sugar and cinnamon. Bake in slow oven until brown. Serve with whipped cream.

*All measurements for this recipe are level.*

*Blue package (seeded) best for pie and bread.*

Now she never wastes a slice of bread. She even has to bake bread specially to make this pudding.

Try the recipe and see how good it is —with

# Sun-Maid Raisins

Hear your men folks call for more, and how they compliment you. Try it now.

Be sure you get Sun-Maids—the finest raisins grown.

Your retailer should sell you Sun-Maid Seeded Raisins (in 15 oz. blue packages), the best bread-pudding raisins, for not more than 20c.

Insist on Sun-Maids, the kind you know are good.

cause her face shone so through the dark.

"The French doll must go up to the attic," said the Christmas Angel. "There is a more beautiful new best doll coming."

"Why, the jack-in-the-box has forgotten how to jump."

You see the jack-in-the-box had been so excited about the rag doll's dress that he had broken his spring.

"The jack-in-the-box must go up to the attic, too," said the Christmas Angel.

Then she went over to the hobby-horse.

"Poor, old hobby-horse!" she said. "Your leg is very badly broken. I will take you up to the attic until you can be mended."

"There," the Christmas Angel said at last, "the nursery is all tidy, and ready for new toys—but, dear me, what's this? Why, it is the little rag doll!"

"Oh, please, do I have to go to the attic, too?" said the rag doll. "It's very cold there, and I know the best doll will have the chimney corner for herself—and I don't want the mice to gnaw my toes!"

"Why, you dear old thing!" said the Christmas Angel. "You're the same rag doll that I used to play with when I was little. You go to the attic? Why, I just guess not! We couldn't get along without you in the nursery. You do need a little mending, but I am going to sew you, and then you shall sit on the very tiptop of the Christmas tree."

The Christmas Angel lighted one of the Christmas candles so that she could see to sew. Then she took the rag doll in her lap and opened her workbag and set to work.

First she stuffed the rag doll's insides with plenty of cotton so she could sit up. Then she sewed her toes and put new little white stockings and black shoes on her feet. She took a piece of clean white cloth and covered the rag doll's dirty face, and painted in blue eyes and a smiling red mouth and vermillion cheeks. She sewed on a new yellow wig; and then she made a pink-and-white checked gingham dress with puffed sleeves, and a white apron with strings to keep the dress clean, and a pink-and-white checked sunbonnet to tie under the rag doll's chin and keep her hair tidy.

"I think you will do now, you dear old thing," said the Christmas Angel.

So it came Christmas morning, and there on the tiptop of the tree sat the rag doll quite made over. The children thought her really the most beautiful of all the Christmas things. As for the rag doll herself—why, all the pleasure of her old days was as nothing to the happiness that was hers now.—Carolyn S. Bailey.

## HINTS FROM HOUSEKEEPERS

### Cowboy Song

Some one noting the many cowboy poems in the Cultivator recently has sent in the following one requesting that it be published.

"THE COWBOY'S RETURN"

Backward turn backward, oh time with your wheels!
Aeroplanes, wagons and automobiles.
Dress me once more in sombrero and flaps,
Spurs, and a flannel shirt, slickers and chaps,
Put a six-shooter or two in my hand.
Show me a yearling to rope and to brand.
Out where the sage-brush is dusty and gray
Make me a cowboy again for a day.

Give me a broncho that knows how to dance,
Buckskin of color and wicked of glance,
New to the feeling of bridle and bit.
Give me a quirt that will sting where it hits
Strap on the poncho behind in a roll
Pass me the lariat dear to my soul.
Over the trail let me gallop away
Make me a cowboy again for a day.

Thunder of hoofs on the range as you ride,
Hissing of iron, and smoking of hide,
Bellow of cattle, and snort of cayuse
Shorthorns from Texas, wild as the deuce.
Midnight stampede and the milling of herds,
Yells of the cowmen too angry for words.
Right in the thick of it all I would say
Make me a cowboy again for a day.

Under the star studded canopy vast,
Campfire and coffee and comfort at last.
(Bacon that sizzles and crisps in the pan
After the roundup smells good to a man).
Stories of ranchers and rustlers retold
Over the pipes as the embers grow cold—
These are the things that old memories play.
Make me a cowboy again for a day.—By J. H. Bissell.

## PURELY INSPIRATIONAL

The archbishop had preached a fine sermon on the beauties of married life Two Irish women coming out of church were heard commenting upon his address.

"'Tis a fine sermon his reverence would be after givin' us," said Bridget.

"It is indade," replied Maggie, "and I wish I knew as little about the matter as he does."—Tid-Bits (London).

## HOUSEHOLD QUERIES

### Candied Citron

Would you kindly send me the recipe for making pie plant citron? I think it was given in the March 25 Cultivator which was before I had the Cultivator to read. My pie plant is still in the field. Will the frost injure them? I get many suggestions from the Cultivator and especially enjoyed the article on Miss Warner's turkeys.—Subscriber, Oroville.

The directions for making candied citron have been mailed our subscriber. They, however, apply to the true citron which grows on tree similar to the lemon and is not unlike a large coarse skinned lemon in appearance. The field citron melons may be candied like watermelon rind or by following directions for candying fruits given on Page 61 of the Cultivator of July 15. This will not have the characteristic citron flavor as the citron or pie melon is practically tasteless. As a suggestion we may pass on the hint to add flavor by placing lemon or orange peel or both in candying syrup. The citron melons will not be injured by any ordinary frost.

If any of our household readers have been successful in candying citron melon we will be glad to pass on their experience in these columns.

### Thin Rich Cookies

Will you please reprint directions for making "Thin Rich Cookies" given in the Cultivator about this time last year? They are the most delicious Christmas cakes, confections rather, we have ever made and the most universally popular in Christmas boxes. Hope you can put this in next Cultivator.—Reader, Los Angeles.

Three eggs, 1 cup sugar, ½ cup butter, pinch salt, enough flour to roll out. Roll as thin as possible, brush the surface lightly with well beaten egg, sprinkle with granulated sugar, cinnamon and finely chopped nuts. Cut in squares and bake till brown in very quick oven. Watch closely for they are so thin and rich that when they start to brown they burn quickly. It really takes two people to handle them properly, one to roll out and sprinkle with sugar, cinnamon and nuts, place on pans and have ready to slip into oven as soon as the other, who has been watching the first batch in the oven, pops them out. They keep crisp for a long time—if they have a chance—are as delicious as any Christmas confection, but less cloying than many and absolutely wholesome for children.

### Chocolate Dipped Candies

We have been asked to repeat Mr. Cruess' directions for dipping candies and dried fruits in chocolate, for Christmas goodies. Here they are. Note his caution not to make chocolate too hot.

Dried fruits of all kinds or candied fruits can be converted into excellent chocolate candies by dipping them in melted confectioners chocolate. This chocolate is melted as follows: Cut thin shavings into a shallow pan. Place pan in water heated to from 90 to 95 degrees Fahrenheit (less than blood heat). When the chocolate melts dip the dried fruit or candied fruit in the chocolate and place on oiled platter. When cooled and solidified it can be packed in candy boxes. The whole secret of success in the dipping of chocolate lies in not having the chocolate at too high a temperature. Candied cherries, chopped raisins and nuts, halved dried pears, peaches and apricots make excellent chocolate dipped candies.

## CALIFORNIA CHRISTMAS LOAF

Made of representative California goodies, without cooking, this loaf is guaranteed by the editor of the California Cultivator to be better than any candy ever made. This is the way it's done:

Take 1 pound seeded (not seedless) California raisins, 1 pound California dates, 1 pound California dried figs, 1 pound California dried prunes, 2 pounds California nuts (walnuts and almonds). Scald dried fruits and let drain and remove pits, blanch nuts by letting stand a moment in scalding water, then in cold and rub off skins. Put all ingredients through food chopper, using coarse knife, mix thoroughly. Have ready buttered loaf pan. Pack mixed nuts and fruits in tightly with spatula, packing firm and tight. Place in ice box over night or cover and leave in cold place, such as back porch. Put a real cutting edge on the carving knife. Pull and shake gently sides and ends of loaf pan to loosen loaf and turn out on platter or cutting board. Shave down slices—thick or thin as desired—with the sharp knife, then cut in squares. If wished these may be rolled in sugar or dipped in chocolate, following directions given elsewhere in this department. This loaf will keep for months.

## TURKEY STUFFINGS

### Chestnut Stuffing

Cook chestnuts in boiling salted water until soft, then drain and mash. Melt ¼ cup butter, add 1 teaspoon salt, ⅛ teaspoon pepper, ¼ cup cream. Melt another ¼ cup butter, add 1 cup cracker crumbs, mix well, then add to chestnut mixture and mix thoroughly.

### Oyster Stuffing

Two cups cracker crumbs, 1 tablespoon chopped onion, 1 pint oysters, ¼ cup butter, 1 tablespoon salt, 1 teaspoon pepper, 1 tablespoon chopped celery, 1/3 cup boiling water or hot milk. Parboil oysters, dip in melted butter, add remaining ingredients.

# White-of-Egg

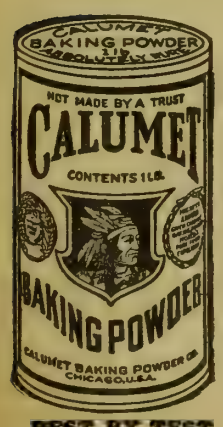
## in Calumet a Vital Element Most Baking Powders Lack

Don't use a leavener that does not contain white-of-egg. When you do you take chances—you run the risk of spoiling your bakings.

# CALUMET

**The Economy BAKING POWDER**

contains a small amount of white-of-egg. This makes it possible for representatives of the company to test it frequently for leavening strength—right on the dealer's counter. Nothing but absolutely fresh stock is permitted to remain on the dealers' shelves. It must always be up to the high Calumet standard.



BEST BY TEST

Remember the white-of-egg in Calumet protects the success of your bakings. It is the economical positive bake-day aid and its sale is 2½ times as much as that of any other brand.

***A pound can of Calumet contains full 16 ounces. Some baking powders come in 12 ounce instead of 16 ounce cans. Be sure you get a pound when you want it.***

# Livestock News Notes

The two big loving cups awarded by F. F. Peabody of Santa Barbara for excellence of exhibits at the Southern California Fair were delivered last week. The one for the best general livestock exhibit went to the Italian Vineyard Company which showed Berkshire hogs, Guernsey cattle and Cotswold sheep. The one for best showing of dairy cattle went to Fred Hartsook for his Holsteins. The cups were awarded on the basis of points won in the separate classes.

C. W. Anderson of Burbank has purchased E. C. Schroeder's interest in the big herd of Holsteins which they owned jointly and will continue the business alone. This herd which is made up largely of daughters and granddaughters of Sir Pietertje Ormsby Mercedes, is one of the strongest aggregations of Ormsby blood in the country. It includes 16 daughters of Sir Piet, two of which are out of Spring Brook Bess Burke 2d. It also includes 15 daughters of Sir Pietertje Ormsby Mercedes 37th, and most of the cows are bred to him. The 37th, who arrived in California last week, is one of the great bulls of the breed. His daughters, all in heifer form, have been making wonderful records in the Erickson herd in Wisconsin. Mr. Erickson has 52 of them and practically all are on test. Among the tested daughters is Wisconsin Pride 2d. In the herd Mr. Anderson has acquired six cows with over 1000 pounds and a number with records from 800 to 1000 pounds. Mr. Anderson is doing considerable testing and is going to have some very excellent records to announce before long.

Mercedes Pontiac of Donnybrook, a senior three year old Holstein cow belonging to Fred Hartsook, recently completed a seven day record of 30.36 pounds butter.

The report of the Stanislaus County cow testing association for last month shows 3146 cows tested with an average of 26.6 pounds fat per cow. 193 cows made over 40 pounds. The two high cows were registered Holsteins owned by E. W. Looney which made 79.4 and 78.6 pounds fat respectively.

The H. G. Ranch of Buelton has sold a registered yearling Ayrshire bull to the Sefton Investment Company of San Diego. They have also sold Harmony Victor, junior champion at several shows this year, to a neighboring dairyman. Jack McLean formerly with Santa Anita and later with Hartsook, is now in charge of the H. G. herd.

Farm bureau centers and others organizations having motion picture equipment can get the several reels of Ayrshire films by writing to Frank Howard, P. O. Box 136, Santa Rosa. There is no charge for the use of the films. Mr. Howard will be glad to furnish full information to interested parties.

# The Influence of Type in the Production of of Pork in California

By E. H. Hughes

The pork producer in California, as well as in any other section of the country is interested primarily in producing a product that first makes money for himself and at the same time meets the need of the consuming public.

At the present time the consuming public requires pork that has been well grown, but is not excessively fat. There was a time, of course, when an extremely fat hog met the demands of the packer because he could not sell the lard for more than he could sell hams or bacons.

From the producers' standpoint there is no doubt in the writer's mind that the big type hog excels. While the producer should not forget that the ultimate end of all hogs is the pork barrel, yet size with depth, constitution and good legs means money for the producer. Constitution is of primary importance, of course, in any class of livestock. In the big type hog we get our constitution in depth rather than width of chest, which is comparable to the constitution of our race horses. The big type hog is an animal that has length combined with depth. Such an animal we believe is on the average more prolific than the shorter, thicker type of hog that we found on our ranches ten years ago. These big type sows farrow more pigs, pigs that are larger at birth and we believe raise a larger per cent of their litters. These pigs in my judgment weigh more at weaning time than the pigs from the old fashioned type of sow. The pigs from the good rangy deep bodied sow have a tendency to grow rapidly and not to fatten, thus reducing the liability of having thumps and that sort of thing. In addition, the big type sow has more room for feed, and other things being equal she should produce more milk for her litter than the short thicker sow. In dairy cattle it has been found that the high producers of milk have capacity, constitution, dairy temperament and large mammary development. I see no reason why these same things might not be true of our hogs.

The question of type in our hogs has always been an important one, and when we see grand champion barrows, such as were seen at the Pacific International recently, some breeders are apt to get the notion that the old thick short kind of a sow is coming back into favor.

If the big rangy deep bodied smooth hog can make money for the producer today, is there any reason why that same animal will not make money for the producer and at the same time meet the demands of the consuming public in the future?

## STATE WOOL GROWERS

At the recent meeting of the California Wool Growers Association at Stockton A. T. Spencer was elected president. Retiring President Ellenwood was elected vice-president, and Frank N. Bullard, treasurer. The board of directors is made up of presidents of branch associations and the following who were elected directors at large: George J. Cleary, Rocklin; Louis Oleese, Bakersfield; Charles Kimble, Hanford; J. E. Maurer, Los Angeles.

Resolutions were adopted endorsing the removal of bear from protected game list, securing abandoned highways for driving of livestock, easier methods of financing livestock producers, prohibiting trespassing by individuals upon privately owned lands without a permit, prohibiting the running of dogs after deer. Further it was resolved if possible to secure adequate appropriations for livestock sales pavilion at University Farm, Davis; control of scabies; from federal government for extermination of coyote, from state for continuing federal-state method of extermination of coyote.

## NEW BANK AT LOS ANGELES STOCKYARDS

The establishment of a stockyard of any size calls for the founding of a bank which functions peculiarly in that its principal business is handling the funds derived from the sales of livestock and making loans on the same commodity. The new union yards at Los Angeles is to be served by the newly formed Southwest State Bank of which John L. Knorpp, head of the Southwest Cattle Loan Company, will be president.

The bank at the stockyards will be useful to the livestock industry in many ways and will serve both large

A Brother to the State Champion

We offer for sale a 3 months old Holstein bull calf sired by King Segis De Kol Mead, whose 4 year old daughter made 1139 lbs. butter in a year on 3 time milking. His daughters have made good in yearly test wherever given the opportunity. He transmits the wonderful ability of his dam, De Kol of Valley Mead, who now has a score of descendants averaging close to 20000 lbs. milk and 1000 lbs. butter in 365 days.

The dam of this calf has 2 records of over 26 lbs. butter in 7 days with over 510 lbs. milk, and a Cow Testing Association record of 802 lbs. butter in a year at ten years age. For several generations back all ancestors averaged 90% white.

Priced reasonably. Guaranteed right.

Los Angeles County Farm
Hondo California
Three miles south of Downey on the Downey Long Beach Boulevard

GUERNSEY COWS

produce practically all of the milk in this country which sells at a price considerably above the market price of ordinary milk. Guernsey grades produce the same kind of milk and they are in demand at good prices.

Every grade dairyman should own the best Guernsey bull he can buy. Write us if you want Guernseys.

## Don't Dally With Injured Udders

BESIDES the danger of serious permanent results, hurts or sores on the udder and teats seriously check the milk yield. The full milking comes from the cows with soft, silky udders, and smooth healthy teats.

Bag Balm, the great penetrating ointment, assures udder health. Quickly heals cuts, scratches, chaps, bruises and Caked Bag. Very valuable in treating Bunches and Cow Pox.

Every barn should have this big 10-ounce package of Bag Balm. Costs only 60c and goes a long way. Feed dealers, general stores and druggists sell it. Let us send free booklet, "Dairy Wrinkles," and if you have never used Bag Balm, send coupon below for free sample.

and small producers. It will facilitate the financing of the feeder industry and in conjunction with the centralized public market at the yards will enable the farmers who wish to feed cattle on a credit basis to operate efficiently. The function of the market in this operation will be that of fixing the cash prices of livestock from day to day so that the banker knows the value of the cattle under consideration, and to provide a place where the cattle may be readily inspected without loss of time. Heretofore there has been no satisfactory way in which banks could place a valuation on cattle and in most cases no satisfactory way in which they could make inspections of cattle in small lots.

It is estimated that 95 per cent of the feeder business of the Central West, one of the most stable businesses in connection with farming, is done on credit, and with the establishing of the essential facilities at Los Angeles it is believed that this business, on which the greatest advance in improvement of quality in meats depends, will be adequately encouraged. Directors of the new bank are F. L. S. Harman, manager of the Central Manufacturing District of Los Angeles; John L. Knorpp, president of the Southwest Cattle Loan Company; Leo M. Meeker, president of the Long Beach National Bank; J. A. McNaughton, general manager of the Los Angeles Union Stockyards Co.; P. O. O'Neil, Los Angeles capitalist; W. S. Witten, general superintendent of the Los Angeles Union Stockyards; B. B. Reynolds.

The advisory committee includes the following: A. W. Ellington, president Warman Steel Casting Company, Los Angeles; J. A. H. Kerr, vice-president Security Trust & Savings Bank, Los Angeles; Arthur G. Leonard, president Union Stockyards, Chicago, and president Los Angeles Union Stockyards; Halsey E. Poronto, vice-president Central Manufacturing District of Chicago and president of the U. S. Cold Storage Co. of Chicago; John A. Spoor, director of Guaranty Trust Co. of New York, director of the First National Bank of Chicago, chairman of the board of the Union Stockyards of Chicago, and Thomas E. Wilson, president of Wilson & Co., meat packers of Chicago. R. A. Knorpp will be vice-president and B. B. Reynolds, formerly with the Drovers National Bank of Kansas City, will be cashier.

### U. OF C. AT CHICAGO

For the third time the University of California won the Clay-Robinson cup which is offered to colleges showing the best group of 5 steers, 5 barrows and 5 wethers, at the International Livestock show at Chicago. This is one of the most sought for honors of the show.

The hog department also made considerable winnings. A telegram from Ralph Dunham, who has charge of the hogs, states that California won 1, 2 and 3 on single Poland barrows under 250 pounds and 1 and 2 on pens of the same weight, 3 on heavy Duroc barrow and 7 on pen of light Durocs; also reserve champion pen of Polands.

In the cattle the farm won 3 on senior yearling Angus steer, 2 junior yearling Angus, 2 on Hereford calf, 1 on crossbred calf, 2 get of sire and champion steer herd of the show.

In the sheep show the university won first on pens of Shropshire, Hampshire, Southdown and crossbred lambs and champion college wether on a Southdown lamb.

This is the fifth year that livestock bred by the U. of C. has been shown at Chicago and every year the winnings have been high. Two years they included the grand champion steer of the show. While not primarily a livestock state like many in the Middle West, California has lots of good livestock and the university farm is typical of the state. Under Prof. Gordon H. True the livestock department has come to be one of the strongest of the school. Funds for this department have never been sufficient but the loyalty of the men connected with it has enabled it to do great work. There are few college faculties as strong in livestock and its associated industries as the U. of C. is now.

## You Should Not Buy a Bull Unless:

You have seen his dam and know that she is the type you want his daughters to be.
Or you have seen a good picture of her with a close-up picture of her udder.
She is a big producer of milk with a high percentage of fat.
Our cows are the tops of all the big sales in the state for the past three years.
Practically all of them have high 7 day and yearly records. They hold 4 world's records.
Our herd bull is Aaggie De Kol Mead, whose five nearest dams average 1130.66 pounds of butter in a year testing over 4%.
You should have one of his sons out of a high record dam.
Call or write for our long-time, easy payment plan.

# Veterinary

**Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.**

### Diarrhea

My cow seems to be very loose in the bowels most of the time. I am feeding her dry oat hay and bran. She was the same last year. She is a young cow with her second calf and is in good health otherwise. Can you tell me what is wrong?—Subscriber, Napa.

Probably the bran has something to do with the trouble. Bran alone often irritates the bowels and causes diarrhea. We would suggest changing to ground corn or some other better feed than bran. Get these powders of your druggist: Powdered gentian, four ounces; powdered nux vomica, two ounces; powdered areca nut, two ounces. Mix and divide into 16 powders. Give one powder once a day in the feed.

### Cow Ailing

Cow up to a week ago gave good quantity of milk. She was feeding on alfalfa which was considerably mixed with broncho grass and other weeds. We first noticed that she fell off amazingly in milk and then that she ate and drank very little, noticed a swelling under her throat and at the breast. Have rubbed the swellings with lard and turpentine but see little change. Please advise what to do for her.—Subscriber, Malin, Oregon.

The symptoms you describe are not common to any disease but when such animals die we nearly always find that they have swallowed a nail or piece of wire and it has cut its way into the lungs. This is not a very encouraging reply to your question but you can see that if such is the case very little can be done. It would do no harm to give her a physic, hoping that the whole trouble, whatever it may be, is still in the stomach. We would suggest giving one pound of epsom salts and half a pound of common salt dissolved in two quarts of hot water. When cool give it all at at one dose as a drench. Follow this with one ounce of aloin, six ounces of turpentine and one quart of raw linseed oil. Mix and divide into four doses. Give one dose once a day.

### Sore Shoulders

Will you publish in your columns a good prescription for an economical gall cure for workhorses shoulders, also an antiseptic and healing powder for use on shoulders? I have been told that a ten per cent solution of tannic acid in alcohol is good for sore shoulders. What do you think of it?—Subscriber, Santa Ana.

The very best remedy for sore shoulders or collar galls on horses is a perfect fitting collar. Nearly always when the shoulders get sore you will find that the collar is too long which drops the tug too low and brings the pull near the point of the shoulder. The collar should fit up close to the neck and the pull of the tug should come about six inches above the point of the shoulder. Rein up the horse so he will keep the collar up where it belongs. The solution of tannic acid in alcohol ought to dry up anything. It is a little expensive and would crack the skin. Here is another just as good for less money. One pint of good vinegar, one ounce of sugar of lead and one dram of sulphuric acid. Shake the bottle well before using. When the harness is taken off at night bathe the irritated parts with cold water and wipe dry then apply enough of the lotion to wet the parts. A good dusting powder can be made by mixing three parts rice flour, one part powdered charcoal and one part air slacked lime. But if you keep the collars right you will not need all this dope.

### Swelling on Shoulder

I have a ten year old horse that has a soft swelling about the size of the hand just above the point of the shoulder and under where the collar comes. It feels as if there was water in it. It does not seem to hurt him. Have been bathing it daily with hot water and applying liniment but it does not improve. What is it and what shall I do with it?—Subscriber, Caruthers.

Probably one of those soft tumors caused by a bruise and full of serum. It is like a blood blister on your hand; if left to absorb it will leave a thickening of the skin which will be easily irritated by the pressure of the collar. The best way to cure it is make a cut up and down nearly to the top and bottom of the swelling and deep enough to open the whole cavity. Wash out all the fluid and wet the inside of the cavity once a day with a solution of permanganate of potash, using one dram to the quart of water. It will take three or four weeks to heal it but then it will be as good as ever. See article on sore shoulders in this issue.

### Warbles

What would you recommend for grub on livestock?—Subscriber, Turlock.

About the only way to get rid of warbles is to squeeze them out. With the ends of the thumbs pressed down on opposite sides of the bunch in a moment the grub will pop out. Destroy grub. The only way to prevent them is to spray the cattle during the summer with something that will keep the bee that lays the eggs away from the cattle. Almost any of the sprays or sheep dips will do it. It does not sting or bite but annoys the cattle very much. Eggs are deposited on the hair.

### Cat with Worms

Please give a remedy for a cat that has worms in the intestines.—Subscriber, Van Nuys.

Get ten 5 grain tablets of santonin of your druggist and give the cat one every evening while they last.

### Indigestion

My cow has been throwing up her cud at night but never in the day time. I feed her mornings with mash made of beet pulp soaked over night mixed with bran and rolled oats, evenings with green alfalfa and pumpkins; also all the alfalfa hay she wants three times a day. What is the remedy?—Subscriber, San Jose.

She has indigestion probably caused by too much feed that will not form a cud. Cut out the bran and beet pulp and feed the rolled oats dry. There is no better feed for cows than alfalfa but it should be cut green enough so the stalks will be tough and form a cud. To sweeten up her stomach get one quart raw linseed oil and six ounces turpentine. Mix and divide into three doses. Give one dose once a day as a drench.

# A New Discovery Makes Hens Lay

Any poultry raiser can easily and quickly double his profits by doubling his egg yield through the remarkable discovery of M. B. Smith, a Kansas City chemist.

Working along entirely original lines, Mr. Smith discovered why hens lay less in winter than in summer and perfected a formula that turns loafers into layers and profit makers.

Within five or six days this discovery, which is called Ditto Egg Tablets, will rejuvenate your flock. Your hens will go strutting and cackling about with red combs and full of life and pep. Every nest will yield an egg nearly every day in the week, which means a lot, since eggs are certain to sell for 60 cents or more. This is not guess work as over 100,000 successful poultry raisers testify to the value of Mr. Smith's products.

Although different from anything you ever heard of, Ditto Egg Tablets are easily administered by simply dropping in drinking water.

So confident is Mr. Smith you can double or triple your egg yield, that he offers to send two large $1 packages of Ditto Egg Tablets (enough for a season) to any reader who will write for them. If you are satisfied they cost only $1 on this introductory offer, otherwise, nothing.

Send No Money—just your name and address to M. B. Smith, 1217 Coca Cola Bldg., Kansas City, Mo. The two $1 packages will be mailed immediately. When they arrive, pay the postman only $1 and postage. Use the tablets 10 days. If you are not getting more eggs or are not satisfied for any reason, simply return unused tablets and your money will be returned immediately without question. A big Kansas City bank guarantees the reliability of this offer. Write today before this introductory offer is withdrawn, as you can sell one package to a friend and thus get your own free.

Established in 1910

## Holly Hatchery

**Capacity 200,000 Eggs**

**WHITE LEGHORN CHICKS ONLY**

Order spring chicks now; delivered by our Special Tan colored Auto delivery around your brooder. We have Wyckoff, Hillview, Tancred, England, Beal and other high record male lines. If you want the best in laying strains, tried out and proven for years, buy from us.

# What is An Accredited Hatchery?

TO explain this phase of the poultry industry one must go back and look into how the Sonoma County Farm Bureau Accredited Hatchery List originated. The first and most important object of the farm bureau in any county is to improve agricultural conditions. When any branch of agriculture is exceptionally active in any county one of the first activities of the farm bureau is the formation of a separate department, such as the dairy department, horticultural department, poultry department, etc. About two years ago the poultry department of the Sonoma County farm bureau was formed. In aiding the poultry industry this department has accomplished several things, namely the establishment of Sonoma County Egg Laying Contest, the Cockerel Auction Sale, the Utility Poultry Show and several minor objects, but while accomplishing these things the hope and desire of the department has always been to do something to improve the quality of baby chicks.

Last fall at a meeting called by the farm bureau, to which all the hatcherymen of Sonoma County were invited, the subject of improving the breeding stock of the county through some uniform method was discussed. The outcome of this meeting was the forming of a contract between the farm bureau and a majority of the hatcherymen present. During the past year eight more hatcheries have signed this contract, making at present a signed up capacity of 1,456,000 eggs.

There are ten requirements that an accredited hatchery must live up to if it desires to remain on the accredited list, and they are as follows:

1. Fowls used for breeders shall be in good healthy condition as judged by the inspector and shall be culled as far as possible during the first period beginning November 1, 1921, and shall be thoroughly culled during the early summers of 1922 and 1923 according to the standards recommended and demonstrated by the agricultural extension service.

2. Females must be at least 12 months old.

3. Males are to be approved by the inspector as to vigor and shall not be less than eight months of age. The males to be used during the breeding season of 1922-23, beginning November 1, 1922, shall have, in addition, trapnest pedigree records on the side of the sire of 175 eggs or better, and the males to be used during the breeding season of 1923-24 shall have a trapnest pedigree record of both the dam and sire 175 eggs or better.

4. No artificial lighting earlier than 5 a. m. or stimulating feeds to produce higher than 40 per cent during the months of December and January.

5. Eggs to be delivered within seven days and precaution taken to prevent chilling or overheating.

6. Weight 22-26 ounces per dozen.

7. Eggs must be uniform in size, shape, color and shell texture.

8. Ample supply of greens must be fed birds in inspected pens.

9. Grain must constitute at least 50 per cent of total amount of grain and mash fed, and where fed in houses, litter must be reasonably clean, dry and close.

10. No chicks bearing the Sonoma County Farm Bureau Accredited Hatchery Trade Mark can be sold for resale as Sonoma County Farm Bureau Accredited Hatchery Chicks.

At the beginning of each month every accredited hatchery is given stickers showing that it is a member of the accredited list for the current month. Should a hatchery be dropped from the list for not fulfilling the requirements the stickers are denied it.

During the past year the work has been divided into four phases; removing colored and speckled hens, ordering and having the cockerels that meet the requirements delivered, culling the old hens, and inspecting birds at 12 months that are to be used as breeders.

Over 18,000 cockerels were purchased, 7,500 coming from breeders throughout California, Oregon and Washington, 8,000 being raised in Sonoma and Marin Counties. 2,700 cocks with single pedigree that were used last year were culled to 1,750, and these are to be mated up again this year. All of these cocks and cockerels have their pedigrees covered by sworn statements and are from breeders that have been referred to the farm bureau as being reliable poultry breeders.

In the culling work 269,400 hens were inspected and culled and 57,380 culls and 6,150 colored hens were taken out and sold. Also about 40,000 birds that are just passing the twelfth month are to be mated for this season's hatching. These birds are at present being inspected for vigor and colored feathers.

Over 50 per cent of the hatcherymen on this list at present are placing their orders for cockerels for next year, which is evidence that they are in earnest and mean to continue improving their breeding stock.

# Poultry Queries

(Conducted by Jean A. Koethen)

### Certified Chicks

What are certified baby chicks?—Subscriber, Tucson, Arizona.

An article on the certified chick appears in this department.

### Amputating Wing Joint

How is the first joint of wing on baby chicks cut, with scissors or knife? Is mortality very large?—Subscriber, Tucson, Arizona.

This question was referred to Mrs. W. G. Suits of the Bandini Ranch at Riverside, who has practiced this method of controlling flying for a number of years. This is her reply: "We use a small pair of scissors just below first joint, then place quickly in very warm dark brooder for several hours. This is done at once on taking from machine or shipping box." When the cutting is done at this early age it is almost painless and the chick recovers very quickly.

### Buff Chickens

Please let me know where I can get Buff Minorcas and Buff Leghorns?—Subscriber, Vina.

Watch the advertising columns of the Cultivator. Probably some one who reads this will send in an ad if there is none already.

### Hatching Turkeys

When is the best time to set turkey eggs so that the turkeys will be ready for Thanksgiving and Christmas?—Subscriber, Lompoc.

As the best selling turkey is one that weighs between nine and 16 pounds, the best month to hatch in is the one which will just give time for reaching this size when the birds are marketed. For marketing at Thanksgiving hatch in March or April. For the Christmas market birds hatched in May or June reach a nice size. As turkey eggs take 30 days to hatch they must be set a month before you want the poults.

### Hens Loafing

Almost six months ago we purchased a lot of 500 White Leghorn hens about 18 months old. They were laying when delivered to us but gradually stopped and went into a molt. They have been through molting for some months but do not lay. Is it a fact that moving hens stops their laying? Had we moved them during the molting period would they have stopped laying? Is there a chance of their coming soon to laying condition? There has been no change in ration, and they have plenty of greens and large yards. What can we do?—Subscriber, Hollywood.

Moving hens is very likely to check laying. Moving them just before the molting period has given yours double time off, but they ought to be on the job again in January, if not before. Hens usually begin to lay as soon as the price of eggs drop, or does the price drop because hens generally are getting to work? You say you are feeding the identical ration the hens had before you bought them. Perhaps you can improve on it. Are you feeding sprouted oats? Sour milk? Moist mash once a day in addition to dry mash in hoppers? Is the grain ration one-third cracked corn? All these things help. Very frequently

hens delay beginning to lay after the molt just for want of a little coaxing. A mash moistened with sour milk the last thing before the hens go to roost is a particularly good coaxer.

### POULTRY QUERIES

Your answers to "Poultry Queries" are undoubtedly good, but some of them not beyond reasonable criticism. In nearly every issue someone's hen is suffering from a louse or a mite, and always you advocate the same remedies. Can you imagine yourself anointing several thousand birds with lard or holding them aloft perhaps while you daintily salt their plumage with sodium fluoride or again, touching them hither and thither with a splash of blue ointment? Your readers (barring myself) are of course human and you must certainly frighten them with such drastic measures. Really now, can't you think up something practical? But when from Redlands there comes a cry of anguish "behold our hen has a cheesy lump on the throat," and the answer comes from the Oracle —"Swab her throat with silver nitrate"—we tremble for the "Roupy hen" when we wonder whether she shall (or has) met her fate by the tabular crystals of argenti nitras or perhaps from a succulent morsel of lunar caustic. Now practically, when we speak of the throat we refer to that part of the esophagus which can be readily swabbed, and in view of this common understanding of the term, does it not weigh upon your conscience to contemplate the goodly number of fowls that may have been sent to their untimely deaths by your carelss instruction. We all have "roupy hens" you know, but perhaps your prescription was merely offered as an alternative to the guillotineal hatchet. They say advice is the cheapest thing; sometimes it ain't.—Subscriber, Puente.

This has not been referred to Mrs. Koethen who has been so efficient in answering various and diversified questions pertaining to the poultry industry. Mrs. Koethen has been answering these questions for many years. When she began this service she rebelled because of the great number of queries which came asking for remedies for various poultry diseases. She was emphatic in stating that prevention is worth many pounds of cure and many times has so urged. Further, Mrs. Koethen felt and has so stated many times, that her province is in giving helpful advice to the beginner, or at least that her suggestions may be of lesser value to the poultryman of long experience. But, knowing the circumstances in many a poultry yard and that there is many a poultry keeper with a small flock who has reasons for saving a bird because of feather, form or great productivity, we have insisted on the continuance of homely helpful advice. No one is compelled to accept it, and yet we konw it has proved of great value to many a perplexed inquirer. The busy poultryman with a thousand or more hens has little liking and less time to spend on nursing sick chickens, so his greatest effort is to secure such cleanliness and perfect sanitation that with proper methods of feeding disease and pests are absolutely barred. At best, poultry are more or less like humans, and we doubt not as long as we produce poultry there will be more or less of poultrymen's troubles which the Cultivator will endeavor to assist in controlling.

### STORRS EGG LAYING CONTEST

Storrs, Connecticut, report for week ending November 28:

Over 1000 eggs in excess of the expected yield for the fourth week is the report from the Storrs egg laying contest. The average yield for this period for the last eight years has been 1403, with the highest previous mark at 1590 eggs back in 1915. Last week, however, the hens laid 2462 eggs or a yield of more than 35 per cent. This big increase in the number of eggs is believed to be due chiefly to the installation of a night system of feeding that was started November 1. All the birds in the contest are gotten up promptly at nine o'clock in the evening and are fed what scratch grain they will consume in the course of an hour. Then the lights are dimmed for 15 minutes when the birds go to bed. The table below shows the average number of eggs laid in each of the first four weeks of the contest in previous years and also the number for the first four weeks in the present contest.

| Period | Ave. no. of eggs | 1922 |
|---|---|---|
| First week | 829 | 1109 |
| Second week | 1083 | 1633 |
| Third week | 1267 | 2164 |
| Fourth week | 1403 | 2462 |

The four leading pens in each of the principal breeds are:

**Plymouth Rocks**

G. B. Treadwell (Barred), 105; Maurice E. Bride (Barred), 96; S. Bradford Allyn (White), 93; Davidson Bros. (White), 93.

**White Wyandottes**

### LIVESTOCK

Weekly summary, Tuesday, December 12, 1922, furnished by Federal-State Livestock Market News Service, 1028 Pacific Finance Building, Los Angeles.

Cattle: With supply of range cattle rapidly diminishing market past week has been strong and prices show gains of 25 to 50 cents over a week ago, and beef cows are as much as 50 to 75 cents higher than during Thanksgiving.

The 8.25 mark was reached last week on a string of good 1150 pound Colorado steers. Bulk northern steers cleared from 7.50 to 8.00, former price taking two loads medium quality Cal. steers. Ariz., Tex. and New Mex. offered few loads common steers which sold from 4.25 to 5.75, going mostly as stockers and feeders. Good Northern steers, fair meat covering, sold for 30 to 60 day feeding at 6.50 to 7.00

Good beef cows 3.25 to 5.75, mostly Col. and Mont. Numerous medium cows went from 4.25 to 5.00, canners and cutters 2.00 to 3.25. Bologna bulls 3.00 to 3.75, load at 3.10 going as stockers.

Calves: Market dull. Bulk common and heavy, few loads from 5.00 to 6.00. Choice light vealers 7.50 and better.

Hogs: More life to market this week and good 170 to 190 pound Tex. hogs went at 9.25 to 9.50. Stock pigs 8.00 to 8.75.

Sheep and Lambs: Demand for fat lambs narrow, due to depressed dressed market. Demand for wool holds prices up, however. Packers insist on lightweights and heavy stock is being penalized. Good light Idaho lambs brought 13.50 last week, and recently shorn Cal. lambs went at 12.35. Band of 501 Inyo lambs on the yearling order half fat, sold at 11.50, averaging 95 pounds. Good fat ewes made 6.25.—Nelson R. Crow, local representative.

### POTATOES AND ONIONS

**These are the actual prices obtained Tuesday, December 12, 1922, furnished by wholesalers in their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc. Terms: Cash on walk. There may be slight fluctuations during the day's trading.**

Potatoes: Northerns: Rivers, 1.50@1.75; poor, low as 1.40 cwt. Idahos: Russets, 1.50@1.75. Sweet Potatoes: Locals, Nancy Halls, 2; Jerseys, 2@2½ lb. Northerns: Nancy Halls, 2½@3 lb.

Onions: Stocktons: Yellows and Browns, 2.25; Whites, best, 4.00@4.25; poorer, 3.75 cwt. Locals: Yellows, 75; Spanish, 1.00 per lug; 3.00 per cwt.

Garlic: Mex. and Northern, best, 8; poorer, 7.

### VEGETABLES

**These are the actual prices obtained between 7 and 8 o'clock, December 12, by wholesalers in their sales to retailers, pedders, hotels, restaurants, cafeterias, etc. Terms: Cash on the walk.**

Artichokes, 1.50@1.75 doz.; small, 1.00@1.25 doz.

Beans: Kentucky Wonders, 12@14. Limas, 6@8.

Bunched Vegetables: Per dozen bunches: Turnips, beets, 30@35; carrots and spinach, 25; parsley, 15; onions and radishes, 10@15 ;parsnips, 40.

Cabbage: Local and Northern, best, mostly 2@2¼.

Cauliflower: Per doz., 1.00@1.25

Celery: Wide range in quality and prices. Locals: best, 3.00@3.50; poorer, 2@2.50. Northerns: 3.00@4.00 per crate according to quality.

Cucumbers: Southern, 1.85@2.00 per flat; 3.00@3.25 per lug.

Eggplant: Local, 6@7 lb.

Lettuce: Local, best, 1.25@1.50; ordinary, 1.00 per field cr.

Peas: Orange County and Carlsbad, best, 14@16.

Peppers: Locals: Bells, mostly, 6@7; Chilis, 5@6; Cherry Chili, 13@14.

Sacked Vegetables: Per sack. Beets and Carrots, 90@1.00; Turnips, 1.25@1.50.

Squash: Summer best, 1.50@1.75 lug; Hubbard, 2½; poorer, 1½; Cream, 3@3½.

Tomatoes: Local: lugs, ripe best, 1.25@1.50; poorer, 80@1.00.

### FRESH FRUIT

These are actual prices obtained December 12, by Los Angeles wholesalers from their sales to retailers, peddlers, hotels, restaurants, cafeterias, etc., as compiled by the U. S. Bureau of Markets. Terms, cash on the walk.

Apples: Northerns: Bellflowers fancy, 3½ tier 1.25@1.35; 4 tier 1.35@1.40. Utahs: Jonathans loose, 3½@4 lb.; poorer, 3; Delicious, 7 lb. Idahos: Jonathans loose, 3@4; Ganos, 3 lb. Washingtons: Jonathans packed, extra fancy, 2.00@2.15; fancy, 1.75@1.90; overripe soft, 1.50@1.75; Delicious, extra fancy, 2.40@2.65; Yellow Newtowns, fancy, 1.60@1.75 per box. Oregons: Spitzenburgs extra fancy, 2.10@2.25.

Cranberries: Cape Cods: Late Howes, 18.50@19.50 per barrel; 9@9.75 per half barrel crate. New Jerseys: Late Howes, 18@19 per barrel, crates 9@9.50.

Grapes: Locals and Northerns: Muscats best, 4@5; Malagas, best, 4@5; Red Emperors, 5@6; poorer, 3@4 lb.

Pears: Northerns and Locals: Bartletts, best, 7@8; poorer, 5@6.

Persimmons: Lb., 9@11; poorer, 7@8.

Pomegranates: Lb., 6@8.

### CITRUS FRUIT

Grapefruit: Arizonas: 64-96 sizes, seedless, 4.75@5.00 per box. Imperial Valley, special brands, 5.50@6.00 per box. Northern, 3.00@3.75 per box.

Lemons: Special brands, fancy 7.50@8.50; choice, 6.00@7.00 box; market pack, 3.50

Oranges: Northerns: Special brands, Navels, 4.75@5.25 per box, market pack, 3.50@3.75 per box.

### HAY

Following are prices in the general market to growers f. o. b. Los Angeles in carload lots; handling and commission must be added to obtain retail prices on new hay:

A slightly weakened condition obtains because of increased receipts, but it is thought to be only temporary.

| | |
|---|---|
| Tame Oat | 22.00@24.00 |
| Barley Hay | 16.00@18.00 |
| Rabbit Alfalfa | 24.00@26.00 |
| No. 1 Dairy | 22.00@24.00 |
| Standard Alfalfa | 16.00@18.00 |
| Wheat Straw | 10.00@12.00 |
| Barley Straw | 9.00@11.00 |

Prices for alfalfa being received by growers on the ranch vary greatly. As approximate figures we may say that Rabbit Alfalfa is bringing the growers around 25.00@27.00 as a fair average. No. 1 dairy is varying from 15.00@18.00 with 16 as a mean or average price. Standard, 10.00@12.00.

### GRAIN

Prices L. A. Grain Exchange, December 12:

Milo, 100 ton lots, December del., 2.00. Barley, 100 ton lots January del., 1.62¼.

Cal. Farm Bureau Marketing Exchange reports December 12:

Heaviest shipments of grain in history of L. A. markets have been coming in for past 45 days. Result has been that L. A. market has been overloaded. Spot market here lower than grain can be bought for shipment from the country. Present prices do not reflect market conditions except as to immediate vicinity of L. A. At present barley is running around 1.52½; milo, 2.05@2.10; bulk yellow corn, 1.70@1.75; Sonora wheat, 2.00@2.15; milling wheat, 2.15@2.30 according to quality. We expect these excessive arrivals will soon let up and grain market return to normal basis. For the present anything shipped in to L. A. will have to be discounted to secure sale.

San Francisco market in comparison to L. A. shows unnatural condition for this time of the year. Barley is worth as much or more than it is here, selling S. F. at 1.50@1.52½ for feed and up to 1.60 for choice. Wheat prices about as quoted in L. A.

# San Francisco Markets

| '22 | 55½ | 55½ | 57 | .... | 57½ | 58 |

### POULTRY

Sales to Retailers: Below are listed averages of actual prices obtained between 7:30 and 9 o'clock the morning of December 11, by San Francisco jobbers from their sales to retailer, hotels, restaurants, cafeterias, etc. Slight fluctuations may be noted during the day's trading.

Broilers: 1 to 1¼ lbs., 33@35 per lb.; 1½ to 1¾ lbs., 30@32 lb. Colored, 25@27 per lb.

Fryers: Leghorn, 2 lbs., 26@28 per lb. Colored, 2 to 3¼ lbs., 25@27 per lb.

Young Roosters: Colored 3½ lbs. and up, 25@27 per lb. Staggy, showing spurs, 21@23 per lb.

Old Roosters: Colored, 17@18 per lb. Leghorn: 14@15 per lb.

Leghorn Hens: 2½ to 3 lbs., 18@20 per lb.; 3 lbs. and over, 24@26 per lb.

Large Colored Hens: 26@28 per lb. Off stock 23@25 per lb.

Ducks: Young, 18@20 per lb. Off stock, 15@18 per lb.

Geese: Young, 20@25 per lb., according to quality.

Live Turkeys: 30@33 per lb.

Dressed Turkeys: Fancy, 35@40 per lb. Off stock, 20@25 lb.

Belgian Hare: Live, 15@18 per lb. Dressed, 18@23 per lb.

Jack Rabbits: 2@2.50 per doz.

Squabs: Live, fancy, 55@60 per lb. Common, 3.00@3.50 per doz.

Old Pigeons: 2.50@3 per doz.

Guinea Fowls: Young 8@10 per doz.

### LIVESTOCK

In reviewing conditions governing the local livestock market during the past week the Federal-State Livestock Market News Service says:

Cattle prices, per cwt. (delivered off cars from San Francisco)—Beef steers, good grades, 7.75@8; medium grade, 7@7.50; common grade, 6@6.75; beef cows, good grade, 5.75@6; medium grade, 5.25@5.50; common grade, 4@5; canners and cutters, 2@3.50; bologna bulls, 3.00@4.50.

Calves—150 to 200 pounds, good and choice, 7.25@7.75; 200 to 250 pounds, 7.00@7.25; 250 to 300 pounds, good and choice, 6.75@7.00; over 300 pounds, 5.50@6.50.

Hogs—Good and choice, grain fed, Californias, 150 to 200 pounds, 10.25@10.50; 200 to 250 pounds, 9.50@10; 250 to 300 pounds, 8.50@9; 300 pounds up, 7.50@8; smooth sows, 250 to 300 pounds, 6.50@7; rough sows, 250 to 300 pounds, 5.50@6; rough sows, over 300 pounds, 4.50@5.50.

Sheep and Lambs—Lambs, good and choice grades, 13.50@14; medium grades, 13@13.50; ewes, medium and good, 5.50@6.50; wethers, medium and good, 8.50@10.

### FAT HOG AUCTIONS

### POTATOES AND ONIONS

Sales to Retailers: Averages of actual prices obtained December 11, between 7:30 and 9 o'clock by San Francisco wholesalers from their sales to retailers, hotels, restaurants, cafeterias, etc. Terms: Cash on the walk. Slight fluctuations may be noted during the day's trading, while higher prices are sometimes obtained where credit is given or goods are delivered.

Potatoes: Wharf and track prices, Rivers, 70@85; Salinas, 1.65@1.85 cwt. Idaho Russets, 1.25@1.35 cwt. Washington Gems, 1.20@1.30 cwt. Jobbing: Rivers, 90@1.15.

Sweet Potatoes: Merced, 1¾@2 lb. Nancy Halls, 2 lb. Poor for less.

Onions: Green onions, 1.25@1.50 box. Stockton Browns and Yellows, 1.25@1.75 cwt. at wharf, white, 1.50@1.75 cwt.; jobbing prices, 25@35 higher. Garlic: 4@6.

### VEGETABLES

**Prices furnished by state department of agriculture, division of markets:**

**Sales to Retailers: Below are listed averages of actual prices obtained between 7:30 and 9 o'clock, December 11, by wholesalers from their sales to retailers, hotels, restaurants, cafeterias, etc. Terms: Cash on walk. Slight fluctuations may be noted during the day's trading, while higher prices are sometimes obtained where credit is given or goods are delivered.**

Artichokes: Per lug, 20.00@22.00.

Beans: Kentucky Wonder and Wax, 12@18 per lb.; French, 18@20; Limas, 5@9 per lb.

Brussels Sprouts: 5@5½ lb.

Bunched Vegetables: Carrots, 50@60 per dozen; turnips, 55@60 per dozen; beets, 50@60 dozen; parsley, 30; radishes, 30 per dozen bunches.

Cabbage: 1@1¾ per lb.

Cauliflower: Doz., 1.00@1.25.

Celery: Local, 2.00@3.00 cr.; 15@25 per half doz. bunches.

Cucumbers: Southern, 1.25@1.75 small box; English, 1.00@1.75 doz.

Eggplant: Southern, lb. 6@7.

Endive: Lb., 50@55.

Lettuce: Local, best, 1.25@1.75 cr.; Sacramento fy., 2.75@3.00; So., 3.25@3.50 cr.

Mushrooms: Lb., 25@40.

Peas: Imp. Valley, 10@17½ lb.; fy., 20.

Peppers: Bells, Southern, 6@8; Chili, 8@9.

Rhubarb: So. 1.00@1.50 box.

Sacked Vegetables: Carrots, 1.00@1.25; turnips, 1.25@1.75; beets, 1.00@1.25; pumpkin and squash, 1.25@1.75 sk.; lb. 2.

Spinach: 5@7.

Squash: Summer, 1.25@1.75 L. A. lug; Italian, 1.25@1.50 box.; Cream lug, 1.50@1.75 lug.

Tomatoes: Bay and Peninsula, 50@1.00 lug; basket, 1.00; San Diego best, 1.25@1.75 cwt.; 1.75@2.50 L. A. lug. Los Angeles, 1.75@2.50 per lug.

### FRESH FRUIT

Prices furnished by state department of agriculture, division of markets:

Sales to Retailers: Below are listed averages of actual prices obtained between 7:30 and 9 o'clock, December 11, by wholesalers from their sales to retailers, hotels, restaurants, cafeterias, etc. Terms: Cash on walk. Slight fluctuations may be noted during the day's trading, while higher prices are sometimes obtained where credit is given or goods are delivered.

Apples: Gravensteins, nominal. Bellflowers, best, 1.10@1.50 box. Winter Pearmains 1.25@1.50 box. Newtowns, 3½@4 tier; 1.25@1.50 box. Spitzenburg, fancy, 1.15@1.40 box. Jonathans, 3½@4 tier, 1.50@1.75 Spitzenburg, 1.50@2.00 box. Choice, 1.50@1.75. Winter Banana, 2.25@2.75 box. Lady apples, 2.50@3.75; Delicious, 2.25@2.75; Rome Beauty, 1.75@2.25.

Avocados: Cal. nominal; Tahiti, 1.00@3.00 doz.; Florida, 5.00@6.00 doz.

Bananas: Best Eastern, 8@8½ lb.; Hawaiian, 7½@8.

Casabas, 50@85 crate, or 75@1.50 doz.

Cranberries: Eastern, Late Howe, 19.00@20.00 bbl.; Oregon, 5.50@5.75 box.

Grapes: All varieties, 1.00@1.60 cr.; 75@1.75 lug.

Huckleberries: Lb., 25.

Olives: Ripe, 7@8 lb.

Peaches: nominal.

Pears: Anjou, 2.00@2.50 box. Comice, 2@2.25 box. Glout Morceau, 1@1.25 box. Winter Nellis, fancy, 1.50@1.75 box.

Persian Melons: Nominal.

Persimmons: 75@1.75 flat cr.

Quinces: 75@1.50 box.

Strawberries: 1.50@2.25 cr.

### CITRUS FRUIT

Grapefruit: Southern California, 2.00@2.50; Arizona, 4.00@5.00 box; Imp., 6.00@6.50.

Lemons: Special pack, 7.00@8.00 box. Choice, 6.00@7.50. Lemonettes, 2@4.00 box.

Oranges: Valencias, fancy, all sizes. Navels, 3.50@5.00 box; Tangerines, 3.50@4.00 lug.

### BEANS

Shipping prices for 100 pounds. Quotations from California Bean Growers' Association, C. R. C., 1922 beans:

Laarge whites, 6.25; small whites, 6.35; pinks, 6.50; Mexican reds, 5.75; red kidneys, 7.50; Henderson Bush, 9.50; red kidneys, 7.40; Henderson Bush, 9.50; cranberry, 7.65; bayos, 7.40; blackeye, 5.50.

### HAY AND FEEDSTUFF

Under date of December 9, A. W. Scott Co says:

Receipts of hay for the past week 801 tons as compared with 1916 previous week. Market locally steady, offerings light. The car situation has improved but country loadings for San Francisco have been rather light, mainly due to the bad weather. Prices generally are steady on top grades, but low grades move irregularly with uncertain values. Export and coast shipping have been steady but in rather light tonnage. Alfalfa has moved regularly to almost all sections of the state but not in any great amount. Shipments have been light by water and while there has been a little demand for Eastern states, difficulties in obtaining freight space have prevented any quantity moving.

**We quote today wholesale prices in carload lots as appear from dealers' transfers upon the market in San Francisco (for prices to consumers, charges for switching, cartage, commission and handling expenses must be added according to conditions.) Transportation bad, scarcity and high prices for spot.**

Oats: 1.60@1.75.

Corn: Colored Milo, 1.80@1.90; No. 2, bulk, 1.80@1.85; No. 2 Eastern Yellow, 1.80@1.82.

# Citrus Markets

Los Angeles, December 13, 1922.

Release of refrigerator cars from transportation of grapes has allowed shippers of Navels, especially from the central part of the state, to send forward fruit for the holiday market. Conditions have been favorable for maturing Navels. Railroads report better running time; eight days to Chicago, 14 to New York. Rains in citrus districts have had little effect on shipments as the bulk of the fruit was already picked awaiting transportation. First sales of Navels have been somewhat disappointing. Southern California packing

houses sent out quantity of Navels for holiday trade but packing houses will close down again till markets are sufficiently cleaned up to warrant heavier shipments. Large imports of Porto Rican oranges have lowered market on California Valencias.

Arrivals of foreign lemons exceedingly heavy. 78,000 boxes available within 30 days. Market on Californias slow.

**Shipments**

Shipments of citrus fruit to date since November 1, 1922:

Southern California, oranges, 1,025 cars; lemons, 468; total, 1,493. To same date last season, oranges, 704, lemons, 546; total, 1,250.

Central California, oranges, 2,584, lemons, 51; total, 2,635. To same date last season, oranges, 2,906; lemons, 13; total, 2,919.

Northern California, oranges, 223; lemons, 13; total, 236. To same date last season, oranges, 269; lemons, 2; total, 271.

### AT THE AUCTIONS

St. Louis: 3 or., 1 lem. Val. 2.00@2.40, Nav. 4.15@4.65, lem. 2.15.

## Snappy Notes on Livestock

**By A. L. Spellmeyer**

Wednesday, last week the market showed for an hour an activity that equalled the opening morning on fat cattle, and the scales were kept busy. The rest of the week a few good killing cattle came in and sold, but those that dragged lacked quality, for good steers were snapped from 7.50 to 8.25 and cows from 5.00 to 5.50.

Depression continues in stocker and feeder young cattle with light twos steers around 5 cents to 5.50, and that is difficult to understand with continued rains and green grass booming through most of the state.

Two fancy heavy Shorthorn cows weighing 2750 pounds sold at 7.25, the top for fat cows since the yards opened. Some Mex steers sold from 4.50 to 5.25. Calves were a drug on the market and butchers were oversupplied by country and other shipments outside stockyards. From a strong 8 for best calves they dropped to 7 and then to 6 with stagnant offers. Hogs were dull. Feeders sold 8 to 8.70, fats around the 9.50 mark but few moving. Great chance for California men to get some nice feeders and some are picking them up. A. Dinuba butcher outbid packers in San Joaquin with reported 9.60 there for some fat hogs.

Snow has, together with car shortage, tied things up in southwestern Colorado, I hear, with 700 cattle cars on orders and only shipping 30 cars a day. The mountain country is glutted with light feeders etc. that California needs very badly with its present great grass crop, and it's the chance in ten years for the California grass men to make some money. Winter is six weeks too early in parts of Colorado, hence forcing the issue, whereas winter feed is two to three months early in California and giving a great opportunity.

It would be well for Imperial people with feed to file what they have and price they want for feed or by by the month, with stockyards commission men as Colorado and northern men want to put out their half fats and lighter cattle on some definite basis. The same applies to California grass men who have the feed, but either not the money or nerve to buy for themselves.—A. L. Spellmeyer.

Monday: Nineteen loads of beef steers were cleaned up before 9 o'clock. Everything in grounds of any quality is practically cleaned up though light feeders are still dragging at 4.95 to 5 with only two loads unsold. Butchers could not get their demand in good fat steers and stockyards at noon looks deserted of cattle population.

### WORLD RADIO CROP SERVICE

The international radio crop service of the United States department of agriculture got away to a flying start on November 4 with the receipt of a radiogram from the department's Berlin representative regarding beet sugar production in Germany. In less time than it takes to read this sentence, traveling with the speed of light—186,000 miles a second—the message filed in Berlin was flashed to the department of agriculture at Washington, D. C. Thence relayed throughout the United States, the news was in the hands of receiving operators all over the country in less than five minutes from the time the message left Berlin.

"Radio is revolutionizing the dispatch of crop news," said Dr. Henry C. Taylor, chief of the bureau of agricultural economics, in commenting upon the new service. "In these times of rapidly changing economic conditions instantaneous advices of agricultural conditions throughout the world is vitally necessary in the protection and advancement of American agriculture. We want to know not only what crops and conditions were last year, but what they are at the present instant. Radio makes this possible."

A part of the department's service is the dispatch by radio to the International Institute of Agriculture at Rome of a weekly report on the condition of the cotton crops and wheat seeding in the United States. The messages are sent from radio stations of the navy department.

### BIRDS OF HIGH DEGREE

California furnishes almost daily proof of the superiority of conditions not only in production of fruit and field crops but in breeding of animals. The superiority of our conditions for poultry breeding are likewise being shown, still more the superiority of California initiative and methods has just received new proof.

Blackman and Mumford who have built up the Gold Nugget strain of Giant Bronze trukeys, made some records this year of which they are justly proud. At California state fair this year they won 1st old tom, 1st and 2d yearling tom, 1st and 3rd yearling hen. Southern California Fair, Riverside, October, 1922: 1st, 2d and 4th old tom; 1st, 3rd and 4th old hen; 1st, 2d and 4th yearling tom; 1st, 2d and 4th yearling hen; 2d young tom; 1st pullet. Pacific International Livestock Exposition, Portland, Oregon, November, 1922: 1st and 2d old tom; 1st and 2d yearling tom; 1st young tom; 1st and 3rd hen; 1st pullet.

Blackman and Mumford won practically every 1st and 2d and grand sweepstakes at the three greatest shows in the West in 1922 on both male and female. Their California bred tom which took first, also their 2d prize tom, proved winners over a tom which had won first place at the Chicago Coliseum Show in 1921. The judge at the Riverside show was E. C. Branch of Missouri, chairman of the advisory committee of the A. P. A.

### STATE FIG INSTITUTE

The state fig institute will be held at Merced, January 19 under auspices of the California Peach and Fig Growers. Over 400 growers from all parts of the state attended last year's institute and the association hopes that this year's attendance will be even greater. All fig growers, whether members of the association or not are invited. Walter T. Swingle, in charge of research in fig and date interests for the U. S. department of agriculture, will be one of the speakers.

### LIVESTOCK SHOW AT OGDEN

The fourth annual Ogden Livestock Show will be held at Ogden, Utah, January 2-6, 1923. The growing importance of Ogden as a livestock center is fast becoming recognized throughout the Pacific Slope and the Inter-Mountain district. The Ogden stockyards have been increased until now they have a capacity of 200 carloads of cattle, 200 carloads of sheep and 100 carloads of hogs. According to the latest government reports, the Ogden Union Stockyards handle more sheep, cattle and hogs than any stockyards west of Denver.

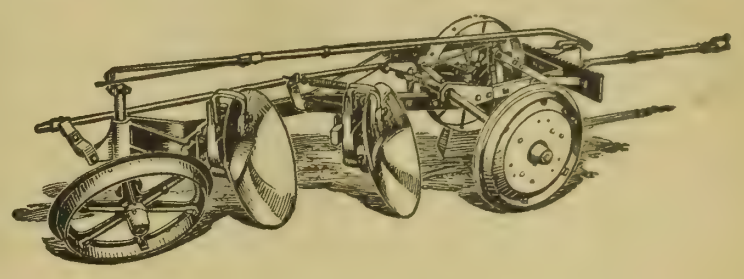
**McCormick-Deering P & O No. 11 Orchard Disk Tractor Plow**

**Gets Close to the Trees Handles Heaviest Cover Crop**



Here is the disk plow that you have been looking for to use in your orchards—one with a hitch that will let you plow right up to the trees, throwing the furrows to or from the rows. It has a number of other new features besides the extreme range of right and left off-side hitch—the wheels set entirely within the path of the disks; there are no levers sticking up to tear the overhanging branches, or damage the fruit; the automatic change in the lead of the rear wheel as the hitch is shifted from one extreme to the other, the large disks, the moldboard scrapers, the simple power-lift device and the pin-break hitch, are a few of them.

**McCormick-Deering Leverless Disk Harrow**

An ideal outfit for orchard disking. It is compactly built, with no projecting levers or parts to injure trees. You can work right up to the rows.

**McCormick-Deering P & O Tractor Orchard Cultivator**

This popular power-lift tractor orchard cultivator is a very efficient tool. It is furnished in 5, 6, 7, and 8 foot sizes. Irrigating attachments are available in 6-ft. (3-furrow) and 9-ft. (4-furrow) sizes.

See the McCormick-Deering Dealer!

## 'Twas the Night Before Christmas---Old Time Poem 100 Years Old Today

**On the night of December 23, 1822, Dr. Clement Clarke Moore, a professor in a New York seminary, was telling to his own children the story of St. Nicholas. A Miss Butler was visiting at the home and, noting the beauty of the story as it was told, jotted it down and a year later sent her copy of the poem to the Troy Sentinel in which it was published, and in addition it was copied by papers all over the country. In 1844 Dr. Moore published a collection of poems in which he included "A Visit from St. Nicholas" though the originally given title, " 'Twas the Night Before Christmas," has remained as it has been repeated for thousands of times through its hundred years of existence. It was many years later before Dr. Moore permitted the use of his name as the author. Many years ago it was printed in the columns of the Cultivator and owing to the date of this week's issue being exactly the 100th anniversary of its first repetition it is most fitting that it should be given the place of honor.**

### 'Twas The Night Before Christmas

'Twas the night before Christmas when all through the house
Not a creature was stirring, not even a mouse;
The stockings were hung by the chimney with care,
In hopes that Saint Nicholas soon would be there.
The children were nestled all snug in their beds,
While visions of sugarplums danced through their heads.
And Mama in her 'kerchief and I in my cap
Had just settled our brains for a long Winter's nap.
When out on the lawn there arose such a clatter
I sprang from my bed to see what was the matter.
Away to the window I fled like a flash,
Tore open the shutters and threw up the sash.
The moon on the breast of the new fallen snow
Gave the luster of midday to objects below,
When what to my wondering eyes should appear
But a miniature sleigh and eight tiny reindeer.
With a little old driver so lively and quick
I knew in a moment it must be St. Nick.
More rapid than eagles his coursers they came,
And he whistled and shouted and called them by name.
"Now, Dasher! now, Dancer! now, Prancer! and Vixen!
On Comet! on Cupid! on Donder and Blitzen!
To the top of the porch! to the top of the wall;
Now dash away! dash away! dash away all!"
As dry leaves that before the wild hurricane fly
When they meet with an obstacle mount to the sky,
So up to the housetop the coursers they flew,
With the sleigh full of toys and Saint Nicholas, too.
And then in a twinkling I heard on the roof
The prancing and pawing of each little hoof—
As I drew in my head and was turning around
Down the chimney Saint Nicholas came with a bound.
He was dressed all in furs from his head to his foot,
And his clothes were all tarnished with ashes and soot.
A bundle of toys he had flung on his back
And he looked like a peddler just opening his pack;
His eyes—how they twinkled! His dimples, how merry,
His cheeks were like roses, his nose like a cherry!
His droll little mouth was drawn up in a bow,
And the beard on his chin was as white as the snow;
The stump of a pipe he held tight in his teeth,
And the smoke it encircled his head like a wreath;
He had a broad face and a little round belly,
That shook when he laughed like a bowful of jelly.
He was chubby and plump, a right jolly old elf,
And I laughed when I saw him in spite of myself;
A wink of his eye and a twist of his head
Soon gave me to know I had nothing to dread;
He spoke not a word, but went straight to his work
And filled all the stockings, then turned with a jerk.
And laying his finger aside of his nose
And giving a nod up the chimney he rose.
He sprang to his sleigh, to his team gave a whistle,
And away they all flew like the down of a thistle;
But I heard him exclaim ere he drove out of sight,
"Merry Christmas to all, and to all a good night."

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will be pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertisers.

### EDITORIALETTES

The cover illustration has given way this week to a beautiful story of St. Nicholas. This was written, it is claimed, exactly 100 years ago and is still bright and fresh for the kiddies of 1922. We think it an excellent idea to gather the children about the hearth or the Christmas tree and let one of them or some member of the family read from this cover selection "'Twas the Night Before Christmas."

* * *

Another selection of even greater beauty, written more than nineteen hundred years ago, which may well be read to the children is that which is found in a book written by one called Luke. The whole of the second chapter of Luke may well be read, but the more beautiful part of the original Christmas story may be said to begin with the seventh verse and end with the eighteenth. This is the true Christmas story in which is the song uttered by the Heavenly Host: "Glory to God in the Highest, and on earth peace, good will toward men."

* * *

Speaking of reading about the hearthstone, it is not a lost art, but isn't it a losing art in many of our homes, that is, are we not drifting away from reading "out loud?" Are we not losing an opportunity for education and inspiration in neglecting the reading of some of the gems of literature which occupy a place on the bookshelves of every home? We are giving sufficient attention to the movies and to the yellow pages in the daily paper. Brush the dust from the classics and give to the children a real uplift by learning how to read.

### SOAKING RAIN

Every portion of the state received a thorough soaking from the rains of last week. The precipitation varied from an inch in some sections to 15 or 16 inches. The storm covered several days and at no time was there any washing or serious injury. The rains have added wonderfully to the happiness of the Christmas season.

### PEARS

No section in the world produces quantity and quality pears as does California. Last year we shipped out of the state nearly 6,000 cars. We canned, dried and ate at home almost as many more.

To express it more accurately: We shipped 70,000 tons of fresh Bartletts; we canned 35,000 tons, dried 20,000 tons and consumed 7,500 tons.

These figures are eloquent as to quantity. As to quality it is difficult to express it with equal eloquence—though we may be permitted to say "California pear quality is best represented by 200 percent to the good."

### BOULDER CANYON DAM

Imperial Valley people are somewhat disapponited in the suggestion of Secretary Hoover that the energies of the Southwest be centered on the building of Boulder Canyon Dam and leave the construction of the all-American canal until a time when the safety of the valley has been provided for by the flood control which will be possible by the dam construction. The all-American canal is greatly to be desired, but it is probable that for a dozen years to come the prosperity of the Imperial Valley will be little affected by the waters flowing through a small portion of Mexico. Of course reclamation of thousands of acres additional will be made possible by the new canal. However, those acres would be of little value if one summer's floods were permitted to break their banks and destroy the whole valley. Save the valley and proceed with improvements of the canal system. Safety first.

### CLEAN UP THE FAIRS

There is an International Association of Fairs and Expositions which held a meeting recently in Toronto. In discussing the matter of making fairs of greater educational value the following whereases and resolution was passed:

"Whereas—Fairs and expositions have exerted a far reaching influence on the agricultural, commercial and educational progress of North America, and;

"Whereas—this influence has been in direct relation to the ability of our fairs to give education, information and inspiration and to their freedom from degrading influences,—Therefore:

"Be it resolved,—By the International Association of Fairs and Expositions that we again go on record as favoring clean fairs, which maintain the highest possible standards for all attractions and concessions, and that nothing be tolerated on our grounds of a degrading or dishonest nature, to the end that our fairs and expositio s render the maximum service in the years to come."

The admission by the management of many fairs of low grade "features and attractions" with the idea that they were necessary to swell the gate receipts has resulted in a reaction, and those attractions, especially those which have to do with gambling, have been discouraged by the better class of fair attendants. A man may wish to take his children to the state or county fair as a matter of relaxation and education, but many a man has refrained from doing so because at some of the fairs literally scores of gambling features have been permitted.

### LET'S GET RIGHT

Under the above title Edgar A. Wright, editor of the Florida Grower, in his own personal column comments on California and Florida shipments of oranges and grapefruit. Mr. Wright says:

"I notice that several Florida papers have taken away the orange shipping championship from California and given it to Florida. Sometime perhaps, but just now it is not a fact, in spite of the severe freeze California experienced during this past season. The citrus shipping season in California runs from November 1 to October 31 During the past season California shipped 29,573 carloads of oranges and grapefruit. During that same period Florida probably shipped nearly 38,000 carloads of oranges and grapefruit, but we must analyze the figures before arriving at conclusions. Figured on a basis of 360 boxes to the carload Florida shipped in the same period about 38,000 cars but California cars are based on 460 boxes to the car. Also we must remember California ships but about 200,000 boxes of grapefruit whereas four-tenths, or thereabouts, of Florida shipments are of grapefruit. On this basis California shipped 12,403,580 boxes of oranges while Florida shipped but 8,100,000. However, the time is not far off when Florida will far surpass California as a shipper of oranges; somewhere from five to ten years and this will come to pass. This is said not at all in a spirit of boasting but as a fact that should be recognized by all concerned. I believe that we will be able to impress this easily upon the Californians who are coming to visit us in February. I remember that about two years ago when Mr. Coachman of Jacksonville took a party of prominent Florida people down through the so-called ridge section of the state that many, particularly these folks from the northern end of the state, were perfectly amazed at the citrus fruit planting they saw and I remember the expression of one Tampa banker who repeatedly exclaimed, 'How in the world do you ever expect to market it all?' Let's claim what we have but no more. We are otherwise only deceiving ourselves."

The Cultivator made some comment in the matter of California and Florida production and suggested that both sections should obtain fuller information as to the citrus producing abilities of the other. The editor still has notes and photographs taken in Florida orange groves and in next issue or later will give some of his observations. Florida is a great citrus producing state and it is well for us to recognize that fact.

### GOOD WILL TOWARD MEN

The land where the first Christmas was celebrated is today nearby the scene of the world's greatest suffering. Starvation and tortures unutterable are being visited on a Christian people because they occupy lands under the domination of the Turk. A year ago at this Christmas time the world poured out shiploads of food and clothing until the suffering was greatly alleviated; the resources of that western portion of Asia were being developed and the Armenian people becoming to an extent self supporting. Renewed persecution drove many of them into Asia Minor and down into what was once called the Holy Land. These people, driven from their own country, have been taken, some to Greece and some to other protected sections, and their need today is far greater than it was a year ago.

Many in America are feeling that the past year has not been kindly in the returns from the soil. Others have produced but could not market. But very few of us are hungry. From our abundance it is fitting to remember the unfortunate race so sorely in need.

An organization has been formed to forward help to these people, and it has regular established offices in California. One, Near East Relief, Room 333 Mills Building, San Francisco. This office has charge of the central and northern part of California. The southwest, including Southern California, Arizona and New Mexico has its headquarters at Near East Relief, Room 517 Wright and Callender Building, 4th and Hill Sts., Los Angeles. Remittances may be sent to either one of these offices.

There are in Southern California some 1500 Armenians who have raised large sums to send to their relatives in Asia. About Fresno is the largest colony in the state, there being about 6000. These people are engaged at this time in raising a fund of $25,000 which is to be used for the purchase of farm implements which will be sent direct from this country to Armenia. The Fresno Armenians raised a total last year of $100,000.

### THAT CHAIN LETTER

The other day we received letter, or rather some typewritten stuff, preceded by a long list of names of people who had sent a good luck wish to somebody else. Now we were requested to copy the whole business and send it to nine others, wishing to them good luck. In fact, here is the good luck—and the other—wish:

"Copy this and send it to nine to whom you wish good luck. The chain was started by an American officer and should go around the world three times. Do not break the chain for whoever does will have bad luck. Do it within 24 hours and count nine days and you will have some great good fortune."

These are not the days of witchcraft and such material should be denied the mails. We all of us appreciate good wishes and are glad when our friends send by letter or word expressions of their good will, but, honest to goodness, we don't like the other. It is very possible our friends have just as much power in wishing ill luck if we do not do as they say as they have in wishing the good luck, but it sounds different notwithstanding.

### NEW ZEALAND LEMONS

Dispatch from Department of Commerce. "A small shipment of lemons from New Zealand has arrived in Vancouver, where it is reported to have created a very good impression, comparing favorably in appearance and quality with California's product. Some idea of the extent of the lemon industry of New Zealand, says Consul MacVitty, Auckland, is gained from the fact that over 11,000 cases, representing the output of 100 growers have been handled by one firm this year. A second consignment of lemons is expected soon in Vancouver."

# Fruit Growers and Farmers Gather in 55th Convention

By C. B. Messenger

A STATE convention in session for three full days and touching only four subjects in its extended and complete program proved of most intense interest to the attendants, and every minute called for closest attention and participation. The discussions had to do with transportation, quarantine, cooperation and legislation. The first two were handled more from a national than a state standpoint, legislation from a state standpoint and cooperation largely from a local standpoint, that is, cooperation as it affected the raisin, almond, prune, apricot, fig, peach, pear, walnut, citrus and other growers. Reports as to the year's work were made by the managers of many of the cooperative associations. Not a failure was recorded during the past year on the part of cooperators, in fact, the statements made which dealt in values to the extent of millions, in some associations almost hundreds of millions, compose a record which should make the state—which should make the nation—proud of the successes of California cooperators. The successes are not so much in dollars to individual growers as in the welfare of the commonwealth. The whitest spot financially in the United States has been California, and this more largely because of cooperation than any one feature of our commercial life.

### Quarantine

In opening the program on the day devoted to quarantine Director Hecke said:

"California's preeminent position in the agricultural and horticultural world may well be attributed not to favorable climatic conditions, as is supposed by many, but largely to three important features, namely: plant quarantine, standardization, and pest control. California excels in the application of these three principles. We must continue to lead if we are to maintain supremacy in the agricultural world.

"We are faced in the marketing of our plant products with competition from countries located on the Mediterranean, in North and South Africa, in South and Central America, in Asia Minor, and in Mesopotamia, where climatic conditions are no less favorable for the production of plant products, and particularly fruit, than in California. In at least some of the countries mentioned contact with the world's markets is closer than that enjoyed by California. It must be patent to all, then, that the maintenance of our favorable position depends upon placing on the market plant products at least equal in quality to products offered by other states and countries; products which are marketed at the lowest possible cost to the fruit grower. Nothing contributes so materially to low cost of production and to quality of agricultural and horticultural products as freedom from insect pests and plant diseases. We have fortunately been able to work out methods whereby we may control most of the pests and diseases now present in California. However, the cost of working out these control measures has been so great as to be staggering, and we have many concrete examples which furnished ample evidence that it is much cheaper and much more satisfactory to prevent the entrance of pests than to practice continual control measures after pests are introduced and established."

Mr. Hecke dwelt at some length on pests which have found entrance into America because of laxness in quarantine enforcement, or rather, in maintaining no quarantine whatever until the past few years, and also touched upon the history of quarantine since its establishment in this state in the days of Alexander Craw and by the federal government less than a dozen years ago. As a creator of lively interest the quarantine question was not as effective as was transportation. Everybody was in line and fully supporting the demands for more stringent quarantine regulations and greater efficiency and a larger force of men for enforcing the regulations.

Interest, however, was lent to the occasion by the fact that the special conference called by Secretary of Agriculture Wallace in Washington this week would with little question endorse more effective federal regulation. California is being represented by nearly a dozen orchardists and quarantine officials, and many of these delegates were present during the convention. Amongst these were Lee A. Strong, chief quarantine officer of the state department, J. J. McDonald of San Jose, V. T. McCurdy of Milpitas, Santa Clara Valley, George C. Roeding, San Francisco, S. Day of Placer County, Aaron Sapiro of San Francisco, and others. It was requested by the convention that James Mills of Glenn County should attend and represent the state convention. He was, however, unable to attend. The Californians and all the representatives from the Pacific Coast states are determined to make a fight for more stringent regulations and more efficient enforcement, especially at Atlantic Coast points.

The harbor of New York is wide open at the present time to all kinds of fruit from the Mediterranean countries. These fruits, especially peaches and other deciduous fruits, are often infested with the maggots of the Mediterranean fly. Even citrus fruits have been known to carry the pest. The claim is made that distribution of such infested fruit in the Northern Atlantic states is no concern of the fruit growers of those sections because the pest does not spread or become serious in their colder climate. This may or may not be true, but it is true that many of the fruits are reshipped from New York to warmer portions of America, and in Florida, in the Panama Canal zone or in Southern California, that pest, if established, would jeopardize the fruit industry.

### Legislation

The discussion of legislation was introduced by R. N. Wilson, secretary of the agricultural legislative committee, created at the convention held three years ago at Chico. This committee has done some magnificent work not only in securing the passage of many bills but in shaping and aiding measures which in some way affected agriculture in California. Mr. Wilson not only reviewed some of the past accomplishments of the committe but referred to the needs which would be presented at the state legislature to convene within the next two weeks. As a foundation for the coming work Mr. Wilson showed a chart giving the details of the work of the U. S. department of agriculture in California. It appeared that the U. S. department is spending in investigational and other work in California in excess of a million and a half dollars. Fred K. Howard, H. J. Ramsay, Frank T. Swett, Leroy Anderson, Ralph Merritt and others joined in this discussion. It appeared from Mr. Swett's talk that California's tax fund amounts to $12.50 per capita. While this is raised largely from a corporation tax, ultimately it is all paid by the people through higher rates which they pay for freight, electricity or other commodities. Of this $12.50 per capita only 16 cents is now appropriated for the work done by the state department of agriculture. Yet without question the greatest burden of raising the tax falls upon the farmer who is protected by the activities of the department. "How much is it worth to keep the Mediterranean fly out of California." And a voice answered: "Four hundred millions of dollars." It would be safest to double this estimate several times. The plant quarantine service is now costing around $200,000. An appeal will be made to the coming legislature to greatly increase this fund.

### Transportation

There seemed for a time to be an effort to make it appear that nobody was to blame for the transportation muddle of the past six months. It was generally referred to as a "shortage of refrigerator cars." Yet it was shown that there were thousands of refrigerator cars on sidings and in yards in cities of Pennsylvania and New Jersey or near the city of New York. It was charged that the Erie and other railways used all of their available motive power to transport coal. Southern Pacific officials stated that they appealed to eastern railways to move out the refrigerator cars that they might be returned for service and even offered to pay freight on cars which should have been returned to their line without charge. The offer was not big enough to induce movement of the cars. Thousands of cars were kept on sidings and those which were filled with fruit and on the way to market were so slow in securing delivery that their early return was impossible. The situation not only caused immense losses to California fruit growers but delegates from Washington, Oregon, Idaho, and a half dozen other states charged not only great loss to this year's crop but the ruin of many a producer whose apples are still on the trees and whose potatoes are frozen solid in the ground where they grew. The situation, especially in Washington, is so serious that it is affecting the welfare of many communities and some farms are already being deserted.

The report of the transportation committee summarizes the action of the convention in the transportation matter.

### Report of Transportation Committee:

Delegates from California, Washington, Oregon, Idaho, Utah and Colorado appointed to represent the fruit and vegetable interests of their several states at a join conference in Sacramento to work toward betterment of transportation of their products, met at 9 a. m., December 13, 1922, at the office of the department of agriculture, Sacramento, and adopted the following resolutions:

Whereas, on problems of common interest joint concerted effort is better than divided individual effort, and

Whereas, There exists a desire to cooperate between the Pacific Coast states as evidenced by this meeting, and

Whereas, joint concerted effort can be more easily and effectively accomplished if there existed a medium through which to cooperate,

Therefore, be it

Resolved, That such a medium be created, and we recommend to our several states that from the public service bodies and transportation committees of each state under whose jurisdiction should properly come effort toward bettering of transportation on perishable products, there be appointed a representative, or representatives, who acting with similar representatives from the other states shall constitute a permanent body through which to coordinate their efforts to the end that there shall be combined concerted effort by the Pacific Coast states on problems of common interest affecting transportation.

Resolved:

(a) That it is the sense of this convention that the burden of responsibility of supplying and distributing adequate refrigerator and freight car service for the movement of our western agricultural crops be left with the carriers, and on principle we are opposed to the pooling of refrigerator cars; that the western roads should formulate plans and submit them to the interterstate commerce commission for the prompt return by eastern carriers of equipment owned by the western lines which was especially designed and intended for our agrictultural products.

(b) That the present refrigerator equipment of the carriers is inadequate for the efficient handling of the tonnage that must be moved to avert disaster to the nation, and that the carriers should inaugurate a building program of sufficient magnitude to not only meet the present shortage but to meet the ever increasing demand, and that this resolution has particular reference to those carriers which enjoy the perishable freight movement without furnishing their proper proportion of refrigerator equipment.

Resolved: That the executives of railroads engaged in the transportation of agricultural products from the Pacific Coast be invited to attend a meeting to be held in Chicago during January, 1923, for the purpose of discussing better transportation facilities.

Resolved: That this convention condemns and deplores all strikes affecting transportation. Such strikes invariably result in enormous losses to

(Continued on Page 671)

# Agricultural News Notes of the Pacific Coast

## Northern California

Pruning of vineyards has started in vicinity of Galt.

The association has raised its price on Blue Diamond Brand almonds two cents.

A rice yield of 46 sacks to the acre is reported by J. H. Lamme of Sutter County.

Half the counties in California have added assistant county agents to aid in farm bureau work.

A tract of 1,200 acres developed in the Holland district will be irrigated from Sutter Slough.

Membership drive in Placer County farm bureau will be continued through December. Present membership is 465.

A new center of the farm home department of Alameda County farm bureau has been organized at Townsend.

The Berkeley Olive Growers' Association is developing 600 acres of olive orchard in Table Mountain district north of Oroville.

Petitions are being circulated in Levee District No. 1 of Sutter County commending trustees for refusal to permit cutting of levees.

Reports of California Fruit Distributors show that of 48,343 cars of deciduous fruits shipped East during May-November, 37,069 were of grapes.

Over 400 Butte County prune growers last week attended a banquet at Hotel Oaks, Chico, given under auspices of the Prune Growers Association.

The California Cattlemen's Association met at the Palace Hotel, San Francisco, December 8 and 9, in sixth annual convention.

The California Development Association is collecting what it characterizes as the most extensive data that have ever been compiled on the state's resources.

Forty counties in California have installed county agents. The three latest additions are San Benito, Inyo and Lassen. In these 40 counties are 90 per cent of the farms.

Deciduous fruit shipments from California north of Tehachapi for the season to November 30 totaled 49,394, over 9,000 cars more than in 1921, despite transportation difficulties.

E. A. Bailey, flood control engineer of the state reclamation board, has been examining the new and old levees on the Feather River below Yuba City to determine advisability of razing the old levee.

With 15 charter members the Orland Fig Growers Association has been organized. Members all raise Kadotas and are uniting in a marketing and general organization. Clarence Wood is president.

Jolly Christmas carols will ring from the State Ferry building at San Francisco during the coming holidays where a shining Christmas tree, 35 feet in height, erected in the upper lobby of the building, will welcome the visitors to California.

The Sonoma County Grape Growers Protective Association is discussing means of improving transportation facilities next season. It is reported that eastern concerns are already outfitting refrigerator ships to handle the 1923 crop via Panama Canal.

## Central California

Orange picking is nearly over in Tulare County.

A poultry department is being organized in the Stanislaus County farm bureau.

Lindsay will this year ship 175 carloads of olives. Last year's shipments totaled 154.

Nearly 300 visitors in one day was the record established at Don Pedro dam recently.

The agricultural department of the Kerman Union High School is making survey of vineyards in that district.

Concrete highways in Stanislaus County will be built from Westley to the county line and between Oakdale and Escalon.

The Stanislaus County calf club is conducting a membership drive. A meeting of all interested will be held at Modesto, January 17.

Orange pruning demonstration, December 23, at Jasmine, Kern County by W. R. Schoonover, extension specialist in citriculture of U. C.

Watsonville members of the California Berry Growers Association held meeting last week to discuss plans for next year's marketing and shipping.

In November the Tulare Poultry Association marketed $4,000 worth of eggs and $6,000 worth of poultry and distributed $7,000 worth of feed and supplies.

There was an attendance of 500 at the annual meeting of the Tulare farm bureau when H. E. Martin was reelected president, R. C. Sturgeon, vice-president and Albert Crawford, secretary.

Owners of 60,000 acres in Tulare Lake district have joined in suit to protect their right to 30,000 acre feet of water from the lake from encroachments of companies which propose to erect levees.

Santa Cruz strawberry growers made cold storage shipments by fast freight to Chicago last season and are planning use of cold storage vans to take berries into the San Joaquin Valley next summer.

The Farm Bureau Marketing Association sold at its hog auctions in the four years closing October, 1922, 179,224 hogs for a total of $4,478,410.06. Sales in Tulare County brought in the largest sum, $1,660,936.48.

Deciduous tree demonstrations are being held today, December 23, at Tehachapi, Kern County. At its ninth annual meeting Kern County farm bureau elected L. B. Nourse president and J. W. Coulter vice-president.

Pacheco Pass, the first lateral highway unit connecting San Joaquin Valley with the coast will be completed in 1924 according to the report of the state highway commission. Bids for the unit from Califa on the state highway to the Madera-Merced line were opened on December 18.

Records of temperature in the citrus belt, with tests of a variety of frost prevention apparatus, are to be made during the winter in the Porterville district. The tests will be made by E. S. Jones of the United States weather bureau but half the cost will be paid by the California Fruit Growers' Exchange.

## Southern California

The Highland district last week shipped 15 cars of new Navels.

The Saticoy district of Ventura County put out a 300 ton crop this year.

Palo Verde levees are to be repaired, bonds have been sold and contracts awarded.

Imperial County cow testing associations have secured services of a third tester.

A third ferry is planned to connect the Palo Verde Valley with Arizona, to be located 2½ miles below the Ripley ferry.

The Escondido chamber of commerce arranged a big picnic and tour of inspection at Henshaw dam, December 1.

The Irwindale Citrus Association shipped 137 cars of fruit during last season. A $9,000 fumigating equipment was purchased.

Roy Beard of Escondido won first prize on Muscat grapes at the fruit show of the college of agriculture held recently at Berkeley.

The Glendora Citrus Association and the Glendora Heights Orange and Lemon Association have voted to withdraw from the A. C. G.

The Imperial Valley Vegetable and Melon Growers Association has already signed up 50 per cent of lettuce growers for the shipping season.

Farm center meetings in Imperial County at McCabe, December 20; Imperial, 21; Acacia, 22; Eastide-Sunset, 26; Alamo-Verde, 27; Niland, 28.

P. B. Easson, extension poultry specialist gave illustrated talks on poultry problems at the December 5 meeting of the Escondido farm bureau.

Apricot growers of Ventura County held a series of meetings last weeek to hear reports from W. R. Kingston of the California Apricot Growers Association.

A one week tractor school is announced for Los Angeles County, January 15-20. Exact location to be chosen within a few days, probably at Covina.

A boys beekeeping contest has just closed in Antelope Valley, John Ritter taking first place for production of 883 pounds honey. Plans are being made for a 1923 contest.

It is reported that the agricultural appropriations committee in congress has restored appropriation for continuance of frost forecasting work by the weather bureau in California.

Two automobile quarantine inspectors started work at Colorado City, the California side of the Yuma bridge across the Colorado river, and a third inspector is to be put on as soon as possible.

Construction work on what will be Ventura County's largest irrigation project is under way in the Las Posas. Between 35,000 and 40,000 acres will be put under irrigation. Zone No. 1 and No. 2 Water Companies are joining in the work.

New directors of the San Diego County farm bureau are John Lamb, Fallbrook; F. L. Cooper, Valley Center; C. M. Pilgrim, Oceanside union; C. O. Higley, Escondido; Ban Van Amersforth, Encinitas; Paul Hartley, Otay; J. Aker, Lakeside; William Stead, Jamul.

## The Coast and General

Farmers of Baker County, Oregon, have persuaded county board to appropriate funds for salary of county agent.

Modern stockyards, the first of their kind, have been established at the City of Mexico by an American company.

The apple packing season has ended in the Okanogan district of Washington. A few growers are holding Winesaps for spring packing.

The National Wool Growers Association will convene at Spokane, Washington, January 24-26. Washington wool growers meet at same place January 22-23.

The Washington irrigation institute at Yakima, November 24-25 gave expression to a unanimous sentiment that there was need for vigorous extension of reclamation activities in the Northwest.

The National Grange held its 55th annual session at Wichita, Kansas, November 15-24. An appropriation of $10,000 was made to finance a great membership campaign the coming year.

Standardizing and stabilizing the potato industry of the Pacific Northwest were the outstanding themes of the Northwest Potato show and conference at Spokane, Washington the last week of November.

Nine hundred selected lambs were recently purchased in Kittitas County, Washington, for the Prosser branch experiment station by Superintendent Roy P. Bean, for use in continuing a series of experiments with feeders.

Seattle is preparing for a northwest poultry show to be held January 3 to 7. It is expected that birds will be on exhibition from Washington, Oregon, California, British Columbia, Idaho, Montana, Wyoming, North and South Dakota.

Wenatchee, Washington, apple shippers have suffered much loss from failure to secure cars for transportation and from damage by cold in transit. Storage space has been insufficient to care for the large amount of fruit held back by car situation.

The first starch factory in Washington will be in operation at Toppenish this month. About 800 tons of cull potatoes have been contracted. About 10,000 tons of potatoes are going into storage in warehouses and a large part of them will be available for the starch factory.

A steamship, just leaving Portland, Oregon, for London, Liverpool and Glasgow, carried 30,000 boxes of apples, booked by the Fruit Export Corporation, which had already sent two consignments of fruit to England. The fruit will go on the refrigerator service at the 90 cent rate fixed recently. The apples are largely from Hood River, comprising Ortleys, Delicious, Jonathans and Spitzenburgs.

W. H. Paulhamus, president of the Puyallup and Summer Fruit Growers' Association of Washington, announced recently that the price of evergreen blackberries of shipping quality for the season of 1922 has exceeded by an average of two cents a pound the price received by the members of that organization in 1921. The net average to the grower is this year $1.62 a crate. Deducting the association charge of 6 cents per crate, covering cost of handling the business, leaves a net return to the grower of $1.56 per crate.

# The Cherry in California

By Leonard Coates

THERE is a renewed interest in cherry growing in California, owing to the generally good prices obtained and the universal appreciation of the quality of this most popular fruit. And it is, perhaps, literally the most popular of all fruits during its short season, but in California the season for even the cherry is lengthened to fully two months by reason of our wide topographical and climatic variation. For instance, while from Vaca Valley and some parts of the Sierra Nevada foothills we get ripe cherries early in April, the same varieties in Alameda or Santa Cruz Counties would not be ripe before the middle of May, and in Napa or Sonoma Counties between these two dates, and this fruit may be found in the market until July.

The area for the profitable commercial cultivation of the cherry is rather limited, being confined mainly to the valleys in the Coast Range either immediately north or south of the Bay of San Francisco, some portions of the Sacramento Valley, and the eastern foothill country. This implied area is extensive enough, but soil and moisture conditions must also be suitable.

For the best results a deep, sandy loam is required, such as is found along the river and creek bottoms where the largest trees are always to be found. It is an open question, however, whether it is desirable to have the largest trees, the expense of harvesting the crop being increased in proportion. What is essential to cherry culture is applicable to all fruits, though in a less degree, and that is perfect drainage, and the deeper the soil under such a condition so much the larger will the tree grow. Unless the requirements of soil and moisture are present, the cherry tree will fail absolutely while other fruits are not so arbitrary in their needs.

### Stocks for the Cherry

What is known as the Mazzard, a cherry growing wild in the Eastern states, is most generally used, not only in California but throughout the United States, as a stock for the sweet or Bigarreau cherries. There are one or two species of wild cherries in Europe which are similar in habit and which are no doubt imported and used very considerably under the name of Mazzard. Another species, a native of Europe, known as Mahaleb, is quite distinct in appearance and in habit of growth, having small, shiny and roundish leaves, the growth of the tree being much more spreading; the wood also is harder. This stock, being of slower habit, will dwarf the trees to some extent. Undoubtedly it is hardier, and more capable of enduring extremes of moisture or aridity and therefore is recommended where the soil and moisture conditions are not congenial for the Mazzard. For this reason again, and because trees on Mahaleb root come into bearing sooner, it is generally the better stock for cherries for the home orchard or town lot.

### Cultivation and Diseases

The cherry tree in California is usually, and preferably, planted at one year old from the bud or graft. Planting directions for any tree are often given, and nearly as often unheeded, but careful attention thereto is none the less imperative. The hole should not be less than two and a half feet deep and the same width. If the subsoil is heavy it is better to blast in the fall while the ground is still dry. If this is done no digging will be necessary, but any "pot-hole" that may be formed must be filled and earth well tamped in. Spread the roots well and firm in the soil very thoroughly. If soil is sandy no harm will result if trees are set a little deeper than they stood in the nursery; neither will it do any good. If soil is heavy and trees are planted too deep they will be stunted, perhaps permanently; in this case a percentage also will fail to grow, and yet there are growers who persist in setting their trees several inches too deep. Perhaps they are right and the tree in error not knowing where to place its roots or its stem.

It is better to leave at least two feet of stem above ground after first pruning and the next year select three shoots, five or six inches apart if possible as a foundation for the future tree and cut them back one-half. By so doing there will be less liability to gumming in the crotches. The year after these main limbs will have branched into two or three more to each one. Thin these out and leave six or seven, so divided that the center of the tree is open or goblet-shaped. These may again be cut back, leaving three or four feet of growth to each. Afterwards, merely thin out where growth is too dense and keep laterals well cut back, which will then soon develop furit spurs.

It is very difficult to prevent buds on a young cherry tree from being broken out. For that reason alone it is always advisable to leave two feet or even three feet after planting. If many of the buds are broken so that there will not be leaves on the main stem to shade it, it will be necessary to use some other method of shading, strips of burlap, loosely wrapped around being the best. The bark of a newly planted cherry tree is very susceptible to changes of temperature, being burned by the rays of the hot sun or affected similarly when the weather turns suddenly cold and frosty in the spring. Apparently, the flow of sap is checked and "gumming" ensues. This gum should be cut out at once or it will increase the affected area. These conditions are worse where soil or atmosphere are not suitable.

What is known as the pear slug, a small, slimy worm which hatches and feeds on the upper surface of pear, cherry and plum leaves, sometimes becomes a serious pest. It is easily controlled by dusting the leaves with a fine, gritty dust, which adheres to the worm or by an arsenate of lead spray which poisons the leaves on which it feeds. Gophers are very troublesome in the cherry orchard and must be fought incessantly by means of traps or poisoned bait, or by smoking or the use of carbon bisulphide.

The cherry delights in a uniform degree of moisture during the growing season in both soil and atmosphere, but abhors the dry heat of the interior, although in the river bottoms of the Sacramento Valley it occasionally flourishes. In Southern California the cherry is not a success, the climate being too uniformly warm and dry.

### Species and Varieties

The Mazzard cherry has its origin in Prunus avium, or bird cherry, a species native to Northwestern Europe. There it often grows to a height of 50 to 60 feet when sheltered by other trees and makes a valuable timber. It is in fact distinguished from other species by its upright habit and large leaves. Cultivated types have been arranged into four groups:

The Mazzards, which yield in some cases fruit which is used for preserves and for flavoring in certain liquors.

The Heart cherries, of which Black Tartarian and Rockfort are examples, being more or less heart-shaped and soft in texture.

The Bigarreaux, heart-shaped, but of firm, solid flesh, like Royal Ann and Bing.

The Dukes, of which May Duke is a familiar example, soft-flesh and slightly acid.

Prunus cerasus is another species, of more spreading and dwarf habit, its cultivated forms being:

Amarelles, light-colored sour cherries, such as Early Richmond.

Morellos, dark-colored sour cherries. Seedlings of these are used for stocks for the sweet cherries, giving them a dwarfer habit, but prunus mahaleb, another European species, is more generally used.

The Dukes and Morellos are not cultivated commercially in California as they do not ship well, but a few trees should be found in every home orchard.

The principal commercial varieties of cherry grown in California are Black Tartarian, Royal Ann (or Napoleon Bigarreau), Bing, Chapman, in largest quantities, but very many others of domestic and European origin are grown also.

# Discussion of Irrigation and Cover Crops

By Leroy Anderson

THE habit, or faculty, of believing things which are not true is not nor has it ever been confined to farmers alone. If we read history aright, the world was believed to flat for a longer period than it has been known to be round. Causes of disease were for centuries attributed to the vengeance of God or to witches, while the generally accepted germ theory is of comparatively recent knowledge. For a generation or more we were taught by agricultural investigators and teachers concerning virtues of humus. Now we are told that "there ain't no such thing as humus." If there is such a substance we don't know its function or value, and instead of humus we should think in terms of organic matter. Likewise, the same scientific men have drummed it into our heads how soil moisture moves in all directions in the soil by capillarity. More recently evidence is brought forth tending to show that, while soil moisture may move downward by capillarity, largely assisted by gravity, its movement laterally and upward is too slight to be of any practical moment.

This fact, or theory, concerning soil moisture is of the utmost satisfaction to the farmer who depends upon irrigation as an important source of soil moisture. I remember being told only a few days ago when irrigating by the border check method that possibly 50 per cent of the water is lost by evaporation. Thus we would hurry to cultivate after irrigating and frequently get onto the soil when too damp for the good of its physical well being. However, if surface evaporation is too small to be seriously considered, we may let the soil stand until it is dry enough to cultivate without injury to its texture.

My experience in the irrigation of prune trees, which is the subject under discussion today, began with the crop season of 1919. I became possessor of my present orchard in the spring of 1914. In January of that year, in April, 1916, and in March, 1917 the orchard was irrigated from creek flow. In May 1918 an irrigating well was installed, since which time all irrigation has been by pumping. In September, 1918, a rainfall of over six inches within 24 hours rendered unnecessary any fall irrigation.

### Type of Soil

Speaking as a farmer raised in New York I would say that my soil is a clay loam with a little gravel. The federal soil survey classes it as Yolo gravelly loam. The texture is apparenty quite uniform to a depth of about four feet, below which the proportion of clay seems to be greater. The log of a well kept by the driller, but not a soil expert, reads "surface soil first 13 feet."

### Time of Irrigation

In seasons of normal or well distributed rainfall I irrigate twice, once in May or June and again as soon as possible after the prunes are harvested. Before I was so fortunate as to possess a pumping plant I noticed that orchards which were irrigated at the times mentioned bore uniofrmly the best crops in the district. My own experience shows a marked improvement in crop yields since following similar practice. The rain of September, 1918 added its testimony to the value of fall irrigation. Professor Veihmeyer holds that the summer irrigation should be applied as late as possible before the fruit is ready to be harvested. There are practical considerations which prevent a very late irrigation, such as getting the soil into good condition for picking, putting up props before the trees break, etc. But, further, I do not believe it is essential to crop yield nor to tree growth to delay the irrigation into July for instance. I see no harm in the trees wilting at harvest time. In fact, it seems to me a normal condition for the prune. Professor Veihmeyer advocates also delaying the summer irrigation until the trees have practically exhausted the moisture from the winter rains. If I did that my soil would be so dry and hard that

I could not get the irrigation water down as deep as the roots go. (The root stock is almond). Thus it seems to me better to apply the water while the soil is still moist enough to readily let the additional moisture go to a depth of six or eight feet. However, this may be another case of believing what is not true.

### Method

I use the border check method because it seems to give a more even distribution of the water and compels the water to go down where it is needed. I try to apply from five to seven acre-inches, using the larger amount on the summer application and being quite content if the smaller amount is attained in the fall application.

### Cultivation Following Irrigation

This cultivation is aimed at the objective of loosening and drying the soil as deep as necessary and of leaving a fine smooth surface for prune picking. Loosening of the Yolo loam type of soil while drying is essential because if it dries while packed it becomes too hard to permit of making sufficiently large ridges for the fall irrigation. Thus, following the summer irrigation, when the soil is sufficiently dry I level the ridges with a cultivator and a spring tooth harrow hitched tandem. Then I go over the entire surface with a deep tillage cultivator running from five to eight inches or as deep as possible without tearing up too many roots. This work is done in two directions and is later followed by a double disking also in two directions. If these four times over the land are separated by long enough intervals, when the last disking is completed the soil will be dry enough to run over with the smoother. Two weeks may be required for this drying and loosening operation, but the period of completion is governed by weather conditions as well as by the cultivation. The principle involved in this practice is to do the minimum amount of cultivation to secure the optimum result. Since Professor Veihmeyer assures us that we need not worry about evaporation from the surface there is no need of cultivation after this top layer of soil has become dried and loosened. Concerning methods of cultivation following the fall irrigation I will speak under the subject of cover crops.

### Cover Crops

My orchard when purchased had a fairly good natural seeding of bur clover and alfileria and my handling of the soil has been with the view to perpetuating the bur clover. That is, the plowing has been delayed in the spring as late as practicable in order to insure the ripening of the clover. At the same time the alfileria has also ripened and caused the difficulty I am now facing in the fall of 1922.

To insure the maximum growth of any winter cover it seems essential to start the seed as early as possible. In 1919, which was the first year I have irrigated in the fall, I began the formation of the seed bed by leveling the ridges and cultivating the entire surface before seeding. I soon discovered that the soil texture would be injured in the many damp places and that the packing and fining of the soil to make a good seed bed for melilotus would send the soil into winter quarters in an unfortunate state. Thus I stopped the general cultivation when four acres had been seeded and on the remainder leveled and cultivated the ridges only and seeded that portion with melilotus. As it was rather late in the season a satisfactory crop was not secured, but the unmolested bur clover and alfileria grew abundantly.

In the fall of 1920 and 1921 I broadcasted melilotus after first stirring the soil with a spring tooth but did not attempt to cover the seed. Then ridges were made and the orchard irrigated. When sufficiently dry the ridges were leveled and vetch or peas sowed thereon, broadcasting the seed by hand and covering with a harrow. The peas made a poor stand and would probably have done better if put in with a drill. I am inclined to think the same may be true with vetch. These two seasons came through with a fairly good cover crop.

I think I have been given credit for growing better cover crops than I really have. Practicing the method described for 1920 and 1921, the ground begins to become green about a week after the water is applied. This is due to the alfileria and bur clover, chiefly the former. In fact the alfileria has grown so luxuriantly as to smother the melilotus in many places. By spring time the orchard has a mass of cover crop consisting of alfileria, bur clover, melilotus and vetch, and possibly there is enough of the legume to satisfy nitrogen requirements. However, it seemed wise to discourage the alfileria and with this end in view I did not this season sow any legume before irrigating in the orchard so richly seeded with alfileria. Irrigation was begun on September 25 and ended October 9, but the fall has been so damp as to atmosphere that it was not until November 1 that we could begin to level the ridges and start killing the alfileria. Now with a rain of about three and one-half inches, that beautiful plant is thanking us for thinning its stand so nicely and stirring the soil about its roots and it is smilingly growing faster than ever. With the ground so wet at this late date I am yet undecided concerning the further procedure.

On a small block of prunes I tried this season the plan of covering melilotus before irrigating. The packed portions of the soil were loosened with a spring tooth followed by a smoothing harrow. Then the clover was broadcasted and the ground gone over with the smoothing harrow. Indications at present point to a more uniform germination of the melilotus than when it is not covered, since when lying on the surface it may be washed about by the irrigating water.

This brief outline of practice will indicate that I am yet in the learning stage. I have no set convictions as to the best procedure and doubtless I am often an enigma to my neighbors because in some things I never do twice alike. My notion is that to reach any degree of success the farmer must always be possessed of an open mind, ready to adopt or try any new plan which seems practicable.

# Almost 20,000 Tons of Walnuts

THIS year's crop of walnuts is the biggest ever and almost the earliest sold. Excepting the culls now being cracked and packed there is hardly a car of California nuts available. In reviewing the season's work Manager Thorpe of the association calls attention to the quickness with which all the offerings were absorbed and to the further fact that an early final settlement will be possible with the members. Best of all the market warehouses do not contain a pound of holdover which will be embarrassing to the 1923 crop. Mr. Thorpe says:

"As a result of this strong market situation, the California Walnut Growers Association immediately started paying the locals 75 per cent of full opening prices as each car of walnuts was shipped, and toward the middle of October raised this percentage to 90 per cent and at that time brought the payment on all back shipments up to a basis of 90 per cent of opening prices, thus making possible the distribution of substantial partial payments by affiliated locals to their growers from time to time during the harvesting and shipping season. It is now assured that final settlement on the first pool, which closes November 20, will be made within a week after the pool closes, or not later than November 27.

"As most of the local associations have this year adopted a uniform accounting system by which individual growers' accounts are kept posted daily, and as under this system practically all of the local association's work is done during the shipping season, it should in turn be possible for the locals who have installed the system to make final settlement with their growers on first pool stocks early in December, a record for prompt final settlement which heretofore has never been equalled.

"The final estimate of association's shipments under this season's crop will reach the huge total of 19,680 tons as against 15,265 tons for last year. This is the largest tonnage ever handled by the association with the exception of the season 1919 when our pack broke all previous records by reaching a total of 19,847 tons, or only about one per cent more than was handled this season, although in that year the state's crop totaled 27,000 tons as against an estimate of 24,000 this season. Incidentally, it may be observed that the percentage of total crop handled by the association has considerably increased since 1919.

"The crop this season was more spotted than usual. The northern counties (Santa Barbara and Ventura) produced a tremendous crop, smashing all previous records. Los Angeles, Orange and Riverside Counties, however, fell considerably short of an average production, due to the heavy dropping of nuts from one cause or other during the spring and summer. A further contributing factor to the shortage in the southern counties was an unusually heavy damage by the excessive heat wave of September 16, 17 and 18. Many of the kernels in the nuts were shriveled and dried up by this hot spell, which also caused a considerable percentage of mould, thereby making a much larger percentage of culls than usual, which incidentally made necessary more labor and more expense in the local packing houses in sorting out this unusually large quantity of off quality nuts.

"Some growers in the districts most severely affected by the heat wave will probably feel that the grading at the local plants was too severe. To these growers let us emphasize the fact that the trade is paying a high price for our product. It is only willing to continue paying a high price because it has confidence in the association's policy of always maintaining a uniform high standard for the goods packed under the Diamond Brand. If we lower our standards to a very considerable extent the trade will lose this confidence and it will take us years to regain it.

"Those of us who have occasion to continually observe the quality of foreign deliveries, know that often the imported walnuts are of easily as fine quality as a good average pack of Californias; still, these foreign goods will sell at from two to ten cents per pound under our prices. This may seem strange but in the end it is perfectly logical. The only answer is that some seasons certain varieties of these foreign nuts run to exceptionally good quality. The very next season that same variety may be of the poorest quality of any nuts imported. Again, in the same season, one shipment of a certain variety of foreign nuts may be of excellent quality and the next shipment very unsatisfactory, or even within one shipment of, say a thousand bags, seven or eight hundred may be excellent and the other two or three hundred of very poor quality. In other words, there is a lack of uniformity from year to year and from lot to lot of most of the imported goods and it is this lack of uniformity that causes such general trade dissatisfaction as to make the difference of from two to ten cents between the price of imported goods and Diamond Brand goods, or on the other hand, it is the trade confidence in our uniform quality that enables us to persistently obtain a considerable premium for our brand."

## STATE SCRIP TO BE SOLD AT PUBLIC AUCTION

A public auction sale of state scrip will be held by Surveyor General W. S. Kingsbury, at the State Capitol, Sacramento, Tuesday, January 2, 1923, at ten a. m. State scrip is the cheapest land scrip on the market today. Scrip can be purchased only by citizens of the United States who are residents of California, and can be located on any vacant non-mineral unreserved United States government land in California.

Homestead and desert land entrymen can relinquish their entries through the surveyor general's office and acquire title to the land by the purchase of scrip, provided the land is not withdrawn by the federal government for public purposes prior to the date the land is scripped. The applicant need not live on or improve the land. State scrip is not transferable.

Scrip is sold in 40 acre lots for cash, personal checks received, but no purchaser can buy more than 640 acres, and the surrender of the scrip is payment for an equal acreage of government land.

At the last auction sale of state scrip the price received averaged $6.93 per acre.

All money received from the sale of state scrip goes to the support of the public schools of the state.

For circular giving information concerning state scrip, address State Surveyor General, Sacramento.

# California's Agricultural Wealth Approximates

# Three Billion Five Hundred Million Dollars

Here are facts about California which should make every one of her citizens prouder than ever before of this Commonwealth.

And they should be sent broadcast over the United States so that citizens of other States may more fully appreciate the wonders of California.

Here is a State that is 780 miles long and from 150 to 350 miles wide, with a total area of 158,297 square miles, nearly as great as the combined area of New York, Ohio, Maine, Vermont, New Hampshire, Massachusetts and New Jersey.

Within its boundaries lie the highest and lowest points in the States. Mount Whitney rises 14,502 feet above sea level, while Death Valley sinks almost 400 feet below sea level.

And here are mountains, rich in mineral and timber resources, valleys of amazing fertility, world-famous harbors, cities teeming with industrial activity, lovely homes and contented people.

## Agricultural Income $700,000,000

Of the fourteen leading counties in the United States in total value of crops, seven are California counties.

The total annual income from the field and tree crops of this State is $587,600,591. Dairying adds an income of $99,004,358.

Though probably as famous for her oranges as for any other single product—California's oranges bring her over $50,000,000 annually—this State also raises many millions of dollars' worth of peaches, prunes, apples, apricots, walnuts, pears, plums, lemons, cherries, almonds, grapefruit, figs and olives.

Here grow the *earliest* and *latest* fruit crops of the country; and more winter fruits and vegetables than in all the rest of the United States combined.

California's vineyards return to her citizens over $92,000,000 per year for raisins and grapes.

California's field crops bring great wealth, too. California has been the leader in the raising of barley since 1852, and her annual income from this crop aggregates nearly $30,000,000.

California is the second largest hay and rice growing State in the Union. The former returns over $100,000,000 a year and the latter over $11,000,000.

Great crops of wheat, corn, oats, beans, cotton, tobacco, hemp, rye, potatoes, sugar beets, melons and garden truck are harvested every year and add their millions to California's wealth.

## Farm Values Increasing

A study of comparative figures reveals the fact that though the average size of farms is decreasing, the average value of farms is rapidly increasing. Note these figures:

| | 1920 | 1910 | 1900 |
|---|---|---|---|
| Average acreage per farm: | | | |
| All land | 249.6 | 316.7 | 397.4 |
| Improved land | 100.9 | 129.1 | 164.9 |
| Average value per farm: | | | |
| All farm property | $29,158 | $18,308 | $10,980 |
| Land and buildings | 26,122 | 16,447 | 9,759 |
| Implements and machinery | 1,156 | 414 | 294 |
| Live stock | 1,879 | 1,447 | 928 |

Another important factor in California's agricultural wealth is an enormous investment in live stock which totals over $200,000,000. The investment in poultry runs over fifteen million dollars; more than eight million dollars' worth of eggs alone were shipped from California in a recent year.

Three billion five hundred million dollars is the agricultural wealth of California and she has great additional wealth in her natural resources and her growing industries.

## Serve Your State This Way

This advertisement is one of a series of three, the first devoted to telling of California's agricultural wealth, the second to California's natural resources, and the third to California's industries. These are facts of which you can well be proud.

Beautiful booklets and descriptive literature about California have been prepared by such organizations as Californians, Inc., San Francisco, by the All-Year Club of Southern California, Los Angeles, and by the San Diego-California Club, San Diego.

There are thousands of people in other States who have no conception of California's greatness. Some of them are your friends. Help us tell them.

If you will send to the Southern Pacific Company a list of the names and addresses of your friends, living elsewhere, whom you would like to have receive this series of advertisements as well as the California literature prepared by these organizations, which have for their sole purpose the advertising of California, we will see that your friends get this California literature.

Simply attach your list to the coupon below and send it to us—no obligation on your part. Do it today before you forget. In this way you will help to spread this message of California's greatness throughout the land and perform a valuable service not only to your State but to yourself and to your community.

# Protecting Newly Planted Trees

By W. R. Wood

ANOTHER planting season will soon be here, and the present indications are that many thousand acres will be planted to both citrus and deciduous orchards. Every one of these trees needs some protection from the sun while getting sufficient top growth started to shade the trunk. It must be remembered that while nursery stock is practically all grown in the open field and unprotected from wind or sun, it protects itself more or less by its own foliage as it grows and, the trees being so close together in the rows and the rows never more than four feet apart, they afford protection for each other; therefore they are not sufficiently hardened up to stand the direct rays of the sun to which they are subject during our long summer days following their first season in the orchard. Many planters seem to be under the impression that newly planted trees will do better if allowed to go unprotected and that the sun will harden the bark so that they will be bettetr able to stand other adversities. One has but to watch the efforts of a newly planted tree striving to protect itself by putting out new growth (commonly called suckers) up and down its trunk in an effort to afford shade from the sun, to be convinced that were artificial protection given this growth would go into the top where it belongs.

It has always been a mystery to me why planters will endeavor to buy the best quality of trees regardless of price, use every care in planting them and then neglect the all important matter of affording them protection from the sun and ravages of squirrels, rabbits and other pests, for the sake of saving a few cents in material and labor. I have always contended that the labor expended in suckering unprotected young trees would exceed the cost of tree protectors and the time of applying them and that they were actually a saving in that respect to say nothing of the benefit in the growth and future welfare of the tree. There are thousands of trees lost each year from sunburn and thousands of others that are permanently injured, and eventually die, from the effect of borers and other causes due to their having been sunburned when first planted out. Many others are lost annually from the work of squirrels and rabbits. Practically all of these could be saved by the use of tree protectors, yet there are a lot of people who condemn their use and say young trees are better off without them.

Most of this prejudice I think is probably due to earlier experiences in wrapping young trees with newspapers, burlap, sacks and other materials that did not afford proper ventilation and oftentimes not only smothered the trees but caused the bark to become so tender that they were more susceptible to damage after the material was taken off than if they had been left unprotected from the start.

My experience with such materials cost me many dollars yet were there nothing better available I would still use them rather than let my trees go unprotected. However, with the different types of protectors being manufactured at the present time there is really no excuse for any one letting his young trees go without protection.

The Yucca tree protector made from the wood of the Yucca palm of the desert is very good. Being porous and light it affords ventilation and at the same time gives adequate protection from the sun, and rabbits or squirrels will not molest it.

Another protector made from heavy paraffined paper and perforated so as to afford proper ventilation is giving satisfactory results. It not only affords all the protection necessary but usually outlasts the Yucca protector and for that reason is preferred by many planters. It is not however quite as good a protection against squirrels as the Yucca.

The tar paper protectors are really the best protection against squirrels and rabbits but are objected to by some orchardists on the ground that is true where unperforated tar paper is used, and trees have been injured the black tar paper draws heat. This by its use. However, experiments made with perforated tar paper protectors have proven that they will not damage the trees even in the hot interior valleys. From my experience with these different protectors I believe that for ordinary protection against sunburn the paraffine paper protectors are the best, but where rabbits or squirrels are bad the tar paper protectors can be used to advantage on the first three or four rows next to the uncultivated land from which these pests may come. Do not depend on protectors alone, however, but get busy and poison them.

Squirrels will quite often climb over the protectors and work in the tops of the trees, and to prevent this I have painted the protectors with heavy crude oil which will keep them off until it dries, which will be in from two to three weeks, when they will have to be painted again.

All of these manufactured protectors have wire fastners, and in putting them on the trees it is only necessary to bring them together around the tree and make one turn of the wires. It is then quite easy to remove the protector for the purpose of cutting off any suckers that may appear on the trunk of the tree.

Most all nurserymen carry a stock of these protectors on hand or can direct customers as to where they can be purchased so when you place an order for trees, whether it be few or many, do not fail to include enough protectors to cover them all. They are inexpensive and will insure your trees against sunburn, besides increasing their growth and vigor.

## FARRAND MADE GENERAL COUNSEL OF CALIFORNIA FRUIT GROWERS

The California Fruit Growers Exchange has appointed George E. Farrand, for several years head of the law department of its Los Angeles office, general counsel for the entire institution, including legal supervision over the 220 local associations, 20 sub-exchanges and 60 division offices of the exchange.

Manager Dezell points out that this will centralize handling of legal affairs of over 10,500 citrus growers in California who are members of the exchange. He adds: "Perhaps no other one man in the state has had more to do, or been in closer touch, with the cooperative marketing movement in California and the nation than George E. Farrand."

## REGIONAL CONFERENCE AT AUBURN

The Directors of the Sixth Farm Bureau Regional district will meet in Auburn January 3. This district comprises the Counties of Placer, Nevada, El Dorado, Butte and Yuba. Problems peculiar to those counties are considered at these regional meetings as well as projects which are common. When necessary or expedient problems are carried up to the state federation. The meeting will be especially important because of the attendance of the new state president, A. C. Hardison of Santa Paula, who is making a tour of the state, acquainting himself with the problems of the different sections and getting in personal contact with the different farm bureau leaders.

## VALUE OF TOBACCO WASTE

A Canadian government chemist has made chemical analyses to determine manurial value of waste from tobacco factories, such as tobacco dust, stalks, etc. Potash and nitrogen are the chief nutritive substances present. Potash was found as high as 7.70 in some stalks of the "Burley" variety, and the nitrogent content was 2.90. Some of the tobacco dust contained much sand and ranged as low as 0.65 in potash and 0.60 in nitrogen.

Krogh Pumps

Turbines Centrifugals

If you need any type of pump you will find it to your advantage to write giving all information possible. Without cost to you, our engineering department will recommend the best pump for your service.

Our bulletin 85B describes our turbines. Bulletin 82B describes our horizontal pumps. If you need a horizontal pump direct connected to motor, ask for bulletin 82A.

BUFFALO PITTS TRACTOR

A Real One Plow Farm Tractor

For

California Truck Garden, Orchard or Vineyard Work

For years California Ranchers and Orchardists have wanted a small riding or walking tractor with sufficient power to do all the operations of preparing the soil. Plowing, furrowing, harrowing, discing, cultivating. The Buffalo Pitts Tractor fills this demand.

POWER—EFFICIENCY

ECONOMY—DURABILITY

This tractor has an all steel frame, six horse power, one cylinder, four cycle valve-in-the-head motor, high tension magneto, splash system lubrication, thermo-syphon cooling, belt driven fan, weighs 1135 lbs., 8 ft. 10 in. over all, 4ft 2 in. high, width 2 ft. Enclosed crank case, gears running in oil, bull wheels 26 in. high, 5 in. face. The Buffalo Pitts comes complete — no extras to buy.

# Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When queries are wished in Cultivator address query to 317 Central Ave., Los Angeles.

### Road Right of Way

I purchased half a ten acre tract. The road is now going through along the other half, which requires 30 feet off of my neighbor's five acre tract. Can I be required to give my neighbor 15 feet so as to equalize the easement for the road?—Subscriber, Ontario.

When the easement for the road is taken your neighbor is presumed to be satisfied by payment to him of whatever the value of the easement taken for the road may be. Consequently he has no claim against you for any portion of the roadway which he is forced to give up.

### Replacing Fence

Adjoining neighbor wishes to put new fence around his place. The present fence is satisfactory to me and I do not wish to go to the expense of a new one. Can he compel me to share the expenses?—Subscriber, Nevada City.

Such a question raisies a pure question of fact as to what is substantial fence. If the present fence is a substantial fence, certainly you could not be compelled to pay half the expense of a new fence, such as the fancy of your neighbor might dictate. On the other hand, if the present fence is not a substantial fence, that is, such as would keep out ordinary trespassing animals, then, no doubt, your neighbor would have a right to require you to contribute to the expense of such substantial fence. There is a law which is applicable to such supervisorial districts as elect to have it operated in such districts, which defines a substantial wire fence as one which has three tightly stretched barb wires securely fastened to posts of reasonable strength firmly set in the ground not more than one rod apart, one of which wires shall be at least four feet above the surface of the ground.

### Wife's Separate Property

May a husband, without the wife's consent, lease land acquired by her before their marriage? In case such lease is given, in which the husband signs his wife's name and his own as her agent, could she take action against the lessee and compel him to vacate? Does the husband have the legal right to control separate property of wife?—Subscriber, Del Mar.

The husband is in no sense by the terms of the law, made agent for his wife. It is only with her consent that he becomes such agent. In case the real property stood in the wife's name, such lease would be entirely invalid and would in no wise bind the wife unless she, with knowledge of the existence of the lease, took the rentals therefrom and thus ratified the action of the husband. An agreement for the leasing for a longer period than one year of real property, if made by agent of the party, is invalid unless the authority of the agent is in writing, subscribed by the party sought to be charged. The wife may, without the consent of her husband, convey or deal with her separate property and the husband has no legal right to the control thereof.

### Partnership in Water Ditch

Four parties purchased water from the water company and run this water through the same ditch. One party has done no work upon the ditch, which, for five years, has been cared for entirely by the other three. Have we any right to require him to pay for his portion of the upkeep?—Subscriber, Bakersfield.

Where two or more persons are associated by agreement in the use of a water conduit or are using such conduit or any part thereof for irrigation or other lawful purpose, to the construction of which they or their grantors have contributed, each is liable to the others for the reasonable expenses of maintaining and repairing the same and the distributing of such water in proportion to the share to which he is entitled in the use of the water. If any one of them neglects, after demand in writing, to pay his proportion of such expenses, he is liable therefore in an action for contribution, and in any judgment obtained interest from the time of the demand must be included. Such action may be brought by any or all the parties who have contributed more than their just share of the expenses and plaintiff may recover his costs and reasonable attorney's fees, to be fixed by the court.

### Filing Homestead

Can a wife file a homestead on community property without the husband's knowledge? What rights does this give her, and what redress has the husband?—Subscriber, Watsonville.

In case the husband has not made a homestead selection the wife is empowered by law to make and file such declaration, and such action upon her part is entirely valid. From the time the declaration is recorded the premises described constitute the homestead if made from the community property or from the separate property of the spouse making the selection or joining therein. Land so selected, on the death of either of the spouses, vests in the survivor, exempt from the ordinary community debts. Thereafter the property can be conveyed only by instrument in which both husband and wife join. The husband is given no redress in such instance other than such moral persausion as he can use with the wife. The purpose of the provision, of course, is that the wife may secure the home property from difficulties in which the husband may become involved.

### Defective Pump

My neighbor and I put down a water well. We bought a pump from a concern dealing in pumps and paid for it. The pump company installed the pump and guaranteed it for one year. After the first run it stopped pumping. We hired a well driller to sand pump the well. When the pump was pulled out we found that the bottom portion of it had dropped off into the well. On notification the company's agent came and took what remained of the pump away, and we have heard nothing from it. Can we require the seller of the pump to clean out the well or pay for its loss?—Subscriber, Pomona.

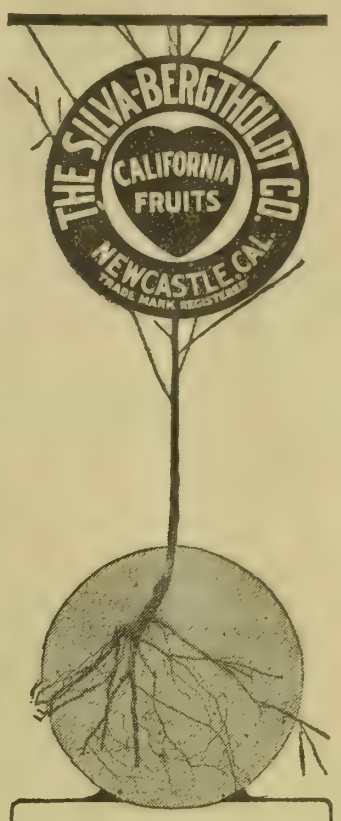
You could not compel them to perform the physical operation of cleaning out the well, but undoubtedly you are entitled to an action for damages against them, first, for the value of the pump, and, second, for compensation for the loss incurred by your effort in good faith to use the pump. This undoubtedly would include the expense to which you were put in employing the well driller, any expense in clearing out the well, and any damage you may have suffered by reason of the failure of the water. If the well is a total loss you very probably could obtain damages for the expense of a new well or for the money which you have expended in putting down this well.

### Probate in Missouri

Married man with no children lives in Kansas City. In case of death without will how would his property be distributed?—Subscriber.

The probate laws of the different states vary considerably as respects distribution in case of death without will. It appears that the law of Missouri provides that in such case as that mentioned the widow is first entitled to all property which came to the husband through her and to all personal property which came to the husband with her written consent; likewise to one-half of the real and personal property belonging to the husband at the time of his death. She, however, is given the right of election to take as just stated, or she can take a life estate in one-third of all the real estate which the husband possessed

# Plant an Orchard



**Note the Roots—** the foundation of your tree—such as are grown only on our foothill soil. Trees are hardy, with well toughened fiber. These qualities spell success to your planting.

I have done some constructive work to safeguard the industry in my promulgation of the "Bergtholdt Plan," *vital to the State and to every fruit grower.*

Copies of my four announcements of 1921, and my three announcements of 1922, will be mailed on application.
J. E. B.

Your success and that of your children is assured in commercial fruit growing. No other farming is as profitable—none so congenial.

If you have fruit land that you now employ in growing wheat, barley, alfalfa or any other farm crop, every year that you defer planting an orchard, you suffer an annual loss of income—the state, an economic loss.

*Prunes, pears, plums, apricots, almonds, table grapes, clingstone peaches and freestone peaches,* according to the adaptability of your location, will pay you more money than any other farm crop, besides enhancing the value of your acreage two dollars for every one dollar you expend in making your orchard.

The success of your orchard investment depends on the planting of good trees, reliably grown.

Our trees are propagated from buds and scions furnished by the Nurserymen's Buds Selection Association. They are well and carefully grown, and they will make good.

Trees are selling out fast and assortments are being rapidly depleted. Submit a list of your tree wants to us today while our foothill-grown trees are still available to you.

Send for our catalog of practical, accurate horticultural information and suggestions.

J. E. Bergtholdt

FRESNO CALIFORNIA

during marriage and to which she has not relinquished her dower right. She also has a right to a family allowance of one year and a certain amount of the furniture of the home. The other half of the estate descends to the father, mother, brothers and sisters or their descendants in equal parts, or if there be no such mentioned relatives, then to the wife.

### Lease Affected by Foreclosure

In case of the foreclosure of a mortgage is an unexpired lease affected? May the lease holder move away the growing crops? How long do foreclosure proceedings continue before ownership changes?—Subscriber, Skull Valley.

If the lease was executed and recorded prior to the time when the mortgage was recorded, then the mortgage interest is subsequent to that of the lease. Otherwise it is prior, and the lessee takes subject to the mortgage. The rules in regard to foreclosure of mortgages vary somewhat in the different states, but it is believed that the laws of most of the western states rather closely follow the California law. Under the law of California the mortgagor has a year from the date of sale under the mortgage within which to redeem. During this period either he, if in possession of the property, or his tenant, are entitled to remain upon the property. The purchaser at the sale is entitled, however, to receive from the tenant in possession the rents of the property or the value of the use and occupation which are required to be credited upon the amount due to redeem from the foreclosure sale. At the expiration of the redemption period, if no redemption has been made, the sheriff issues his deed to the purchaser and after that time he can oust any person remaining upon the land without his consent. Thus, any lease holder would have ample time within which to harvest any growing crops, and, in fact, to plant and harvest crops for another season in the usual course of events.

### Trespassing Hunters

Upon the opening of the deer season and the closing of the quail season there is a continual trespassing of hunters. What can be done to stop this?—Subscriber, Hemet.

There are several provisions in the Penal Code which are applicable. Section 384 C. provides that any one who while hunting upon inclosed lands of another, kills or wounds an animal, is guilty of a misdemeanor. Section 602 provides that any one entering into any inclosure occupied by another for the purpose of hunting game thereon without first having obtained permission from the owner, is guilty of a misdemeanor. These sections apply to inclosed lands and require no posting of signs or other notice. The owner of the land undoubtedly would also be entitled to a civil action against any hunter for trespass and likewise to recover any damage which might be caused through injury to property or animals of any nature on the place.

### Larceny?

A party delivered to me hay in consideration of my services in thrashing his grain. We now find that he had given a chattel mortgage upon this hay and the mortgagee claims it. What can be done?—Subscriber, Buellton.

If the chattel mortgage given upon the hay was recorded prior to delivery to you the mortgagee certainly can foreclose his mortgage and take the hay. Of course by this sale the party giving the hay to you has very probably violated the provision of the Penal Code prohibiting the sale of mortgaged property and is subject to punishment as for larceny.

### Tax Title

When is a tax title safe from litigation?—Subscriber, Fallbrook.

About the best means to settle a tax title is to obtain a Torrens title upon the land. This involves a judgment which is good against everyone that the title of the land is valid.

### Payment of Taxes

A party sold land in September. The vendor thereafter leased the land and deducted from the rent the amount of taxes which were payable in December. Did he have a right to do this?—Subscriber, Hemet.

If the title was one of grant, the use of that word in the conveyance implies that the conveyance contains, as if set forth therein, a covenant that the estate granted is at the time of execution of the conveyance free from encumbrance and that the grantor has not theretofore conveyed the property or any interest therein to any person other than the grantee. Unless the deed contained a reservation of taxes for 1921, which became a lien upon the property on the first Monday in March, the grantor would be obliged to pay such taxes and could not deduct them from rentals. If the deed, however, contained the usual reservation for taxes, then he would be entitled so to do, as taxes would have to be paid by the grantee.

### Inheritance

Can a father leave all of his property to a second wife and her children by former marriage when he has children by the first marriage? The bulk of his estate was accumulated during his first marriage.—Subscriber.

The children, as such, have no vested interest in any property of the father or mother. Upon the death of the wife the whole of the community property goes to the husband without the necessity for administration. Upon his marriage to a second wife, all of this property being acquired prior to this second marriage, would be his separate property. He would, therefore, be entitled to dispose of it by will as he may see fit. In fact, he might give the whole property to some stranger. It is only in case a party dies without leaving a will that the children have a vested right in the inheritance. In case he died without will, then the second wife would have a one-third interest in the property, and the children the other two-thirds interest, to be divided amongst them. The children of the second wife by her former marriage would, of course, inherit nothing. Such will, however, which by its terms practically disinherits his own children, would, necessarily, have to mention such children as, if they are not mentioned, they would inherit under the laws of administration.

### Japanese Land Owners

Are alien born Japanese allowed to own land in California? If they did own land prior to the enactment of recent legislation, what becomes of this land?—Subscriber, Sierra Madre.

The laws pertaining to the ownership of land or any interest therein by persons ineligible to become citizens of the United States were in no sense retrocative. That is to say, they did not, in any manner, affect land which was held prior to their enactment, and as to any land then held by Japanese, they were entitled to continue to own it. There is no prohibition against other Japanese owning land in California. The alien land act provides, however, that in case such alien ineligible for citizenship acquires land or any interest therein, it is subject to escheat to the state of California upon action brought by the state against the party holding such interest, and judgment being obtained therefor.

### Return of Enlisted Man

We have a son in the marine service of the United States. He enlisted in Omaha. On the expiration of his term of service where will he be returned?—Subscriber, Tujunga.

According to the general rule, an enlisted man is returned to the point of enlistment. Many times, however, different arrangements can be made if suitable application is made to the navy department.

### Inheritance Tax

A sister living in another state has left her brother the income of certain property as long as he lives, and then the principal goes elsewhere. Is inheritance tax to be paid on this, and, if so, what amount?—Subscriber, Sierra Madre.

The inheritance tax, whatever it might be, would be payable by the executor of the estate in whatever state the will was probated. Whether or not such inheritance tax would be paid at all would depend on the laws of such state.

### Half Interest in Mortgage

Can a man convey a one-half interest in a mortgage held jointly by himself and wife without his wife's knowledge or signature?—Subscriber, Orland.

There would seem to be no reason why he could not convey such interest. However, of course any party taking the interest which he would convey would take it subject to the terms of the instrument. If it was a true joint tenancy, that is to say, if the survivor obtained the whole, the party purchasing it might or might not get anything.

### Interest in Contract

Husband and wife are making monthly payments upon certain property. If either dies, does the property go to the other?—Subscriber, Claremont.

As the property is community property, upon the death of the wife the whole of the property goes to the husband without administration, and upon the death of the husband without heirs, one-half goes to the wife and the balance is distributed as the separate property of the husband.

### Joint Deed

If there is a joint deed to husband and wife and either dies, what becomes of property? If there is a child? No will?—Subscriber, Claremont.

In the case of a true joint deed, upon the death of either of the parties the whole of the property goes to the survivor. There can be no administration upon this property because, upon the death of the party, he ceases to have any interest in it, and the survivor obtains the whole of the estate. The child, therefore, has no interest. There might be only a simple proceeding to declare of record the death.

### Husband's Debts

Can the separate property of a wife be taken for the debt of a husband? For how long does a judgment run?—Subscriber, Claremont.

In the case of a gift from the husband after marriage, separate property thus acquired may be held for the payment of debts contracted by the husband or wife for the necessaries of life furnished to either of them while they are living together. Otherwise, such separate property is not subject to any debts incurred by the husband. There is no statute of limitations which applies to judgments. Execution may be obtained thereon at any time within five years from the date of the judgment, and after that time, execution may be obtained by filing an affidavit with the court and having the court order such execution.

### House Affixed to Land

I purchased land on an installment contract and placed a house on the land. Can I now remove this house without the consent of the seller of the land?—Subscriber, Arcadia.

Under the terms of the question the title to the land remained in the seller. It was, therefore, his property, and when a person affixes his property to the land of another without an agreement permitting him to remove it, the thing affixed belongs to the owner of the land unless he chooses to require the former to remove it. This rule, of course, may be changed by agreement between the parties such as is frequently done in the case of leases.

### Grazing Claim

What are the provisions concerning grazing claims?—Subscriber, Goshen.

Undoubtedly, the questioner refers to stock raising homesteads. The act providing for these stock raising homesteads went into force in 1916. Under this act the secretary of the interior is authorized upon application to designate as stock raising lands those which are chiefly valuable for grazing and raising forage crops, do not contain merchantable timber, are not susceptible of irrigation and are of such character that a section is required for the support of the family. When anyone who is qualified to make entry, makes application accompanied by a properly corroborated affidavit showing that the land is of the character contemplated, the land therein described shall thereafter be suspended from entry until it is determined if it actually is of such character. No right to occupy the lands shall be acquired, however, until the land department has actually designated the applied-for land as stock raising land. Any qualified homestead entryman may make entry under the homestead laws of the lands so designated as stock raising lands, not to exceed 640 acres, and secure title thereto by compliance with the terms of the homestead act. A former homestead entry of land of the character of stock raising land is no bar to the entry of a tract within a radius of 20 miles from the former entry which, together with the former entry shall not exceed 640 acres. In the case of such additional entry, no residence upon the newly acquired entry is required if the entryman owns and is residing on his former entry. Instead of the cultivation required by the homestead rules the entryman is required only to make permanent improvements upon the land entered before final proof is submitted, tending to increase the value of the same for stock raising purposes to a value of not less than $1.25 per acre, and at least one-half of such improvements shall be placed upon the land within three years after the date of entry. A homestead entryman of land of a character suitable only for stock raising, who has not submitted final proof on his existing entry, has the right to enter contiguous land under the provisions of the act to such amount as, with the amount embraced in his original entry, shall not exceed 640 acres. Residence upon the original entry shall be credited upon both entries, but improvements must be made on the additional entry equal to $1.25 for each acre. Persons who have submitted final proof or received patent for grazing lands under the homestead laws and own and reside upon the land so acquired, may make additional entries for and obtain patent to contiguous stock raising lands which, together with the area theretofore acquired under the homestead law, shall not exceed 640 acres, on proof of the expenditure for permanent improvements on the additional entry. The commutation provisions of the homestead laws do not apply to entries made under this act. A party who has entered a homestead tract, may, if he is unable to exercise the right of additional entries for his lands, or, properly speaking, grazing lands, may, on proof that he resides therein and that there are no encumbrances against it, reconvey his entry and enter a section of the grazing lands within the same land district. Lands entered under this act are all subject to a reservation to the government of all coal and other minerals therein, together with the right to prospect for, mine and remove

such coal and minerals. The time for which the homestead settler has served in the army, navy or marine corps of the United States shall be deducted from the time required to perfect title. Of if discharged on account of wounds and disability, then the term of enlistment shall be deducted without reference to the length of time he may have served. However, any such party who is a homestead settler must reside upon, improve and cultivate the homestead for a period of at least one year after he shall have commenced his improvements.

# Queries Answered

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Sowing Vegetable Seeds

When is the best time to plant seeds for the following, in this locality, that is, when do producers of these sow the seeds in a cold frame—tomato, eggplant, pepper?—Subscriber, Fallbrook.

If in hotbed, seeds will need six to eight weeks; if in cold frame, eight weeks. You should be able to plant with safety about the first week in March. Of course, seasons vary, but Fallbrook is generally pretty fairly free from spring frosts and you should be safe any year by March.

### Girdled Peach Trees

I have some two year old peach trees that the jack rabbits got at and barked pretty bad. It happened after the trees were dormant. I painted them with a can of roofing tar as I had no grafting wax. Will they amount to anything or had I better dig them out and replant? There are about 20. Will the bark heal over small cuts that are tarred?

If your peach trees are not completely girdled they will probably recover. Grafting wax or some form of pruners compound would be more desirable for painting over these cuts but the roofing tar may answer the purpose. If trees are completely girdled the best thing to do will be to pull them out and plant new ones in the spring.

### Weight of Graded Olives

Can you tell me how many olives it will take to a pound after grading, in different grades from 10/16 up to 14/16? (Mission olives)?—Subscriber, Exeter.

The following table was given in the June 15, 1916 issue of the Cultivator: 11¼ to 12½/16—90 to 93 olives per pound; 12½ to 13½/16—72 to 75 olives per pound; 13½ to 14/16—60 to 65 olives per pound; 14/16—50 to 55 olives per pound. The variation in number is no doubt due to the olives not always being of the same shape and also to different degrees of ripeness.

### Birds Ate Almond Buds

I have five almond trees five years old but as big as eight or nine year old trees. Last spring when the buds came out something ate a hole into the center of the buds, and the buds fell off. Could this be something other than birds, as I have an apricot tree and plum tree that were in blossom at the same time that weren't touched. The birds go for the almonds more than the other trees.—Subscriber, Exeter.

Your almond buds were no doubt eaten out by birds as we know of nothing else that attracts them. For some reason the birds prefer almond buds to anything else. Whether this is due to any particular flavor or to the fact that the almond buds become edible for the birds earlier than any others, we do not know.

### Pollenizing Cherries

I have ten acres of cherries at Beaumont and have four varieties, viz. Bing, Black Tartarian, Royal Ann and Lambert. Have I sufficient varieties for pollenization? If not what varieties do I need? Will you answer in columns of Cultivator?—Subscriber, Riverside.

We know of no better arrangement of varieties for pollenization than you have planted and you should not need any others for this purpose. The Royal Ann is the only weak variety you have, all of the others being especially recommended to strengthen this one.

## U. S. WORLD WAR VETERANS, ATTENTION

Isn't it a strange fact that many of us neglect to do the things of most vital importance to ourselves and to those who may be dependent upon us? During the rush of modern life how few men stop to think what would happen were they suddenly stricken with disease or death and their families thrown upon their own resources. Congress realized what this would mean to the country and to our people and so, at the time of our entry into the World War, passed a bill providing for the protection of every man and woman who served in that great conflict, should they or their families be deprived of support through their total and permanent disability or death. This bill is known as the war risk insurance act. It contains many valuable features, some of which seem to have been overlooked by a very great number of World War veterans, and it is the purpose of this article to again present to them and to the public, the privilege they have of obtaining at less than cost government insurance to protect their earning power and their dependents who would be affected most seriously by their loss.

The war risk insurance act permitted all persons engaged in the active military or naval service to take out insurance protection for an amount not less than $1,000 nor greater than $10,000. This was known as term insurance and called for the payment of a very small premium. The bill further provided that this term insurance might be converted into permanent legal reserve insurance within five years from the declaration of peace under any of the following six forms of policies: Ordinary Life, 20-Year Payment Life, 30-Year Payment Life, 20-Year Endowment, 30-Year Endowment, and Endowment maturing at age 62.

All six policies contain such liberal features as 31 days of grace for the payment of premiums without interest; participation in dividends earned from gains and savings; loan, paid-up and extended insurance value after the policy has been in force one year, no restrictions as to residence, travel, occupation, military or naval service; change of beneficiary or change to other forms of policies; total permanent disability benefits; payment at death in one sum or in installments at the option of the insured. No additional charge is made if the insured engages in hazardous employment, nor for the total permanent disability benefits. Premiums are charged at net rates according to the American Experience Table of Mortality and 3½ per cent interest, and these rates are lower than those charged for any other participating insurance with similar benefits.

During the war period approximately 4,500,000 men and women in the active military and naval service applied for and were granted insurance, but on release from the service the large majority dropped their insurance, in most instances because of a failure to understand or to appreciate their rights. However, the number of veterans actively carrying government insurance has since increased to over 500,000, representing approximately $3,000,000,000 insurance protection.

The ex-service men and women who have permitted their insurance to lapse are offered the opportunity to regain this valuable protection at a very small outlay of money. If the veteran is in good health it will only be necessary for him to pay two monthly premiums on the amount of term insurance he reinstates. This reinstatement is permitted in amounts of $1,000 up to the full amount carried during his service. Should the applicant's health be impaired by reason of disability or sickness incurred while in active military or naval service, insurance may be reinstated by payment of premiums in arrears with interest, provided the applicant is not permanently totally disabled. The final date for the reinstatement of term insurance or conversion of it to the permanent forms has been fixed by law as of March 3, 1926.

Further information may be secured by writing to U. S. Veterans' Bureau, Washington, D. C.

## COOPERATION IN AGRICULTURAL RESEARCH

The close and varied relationships which exist between the United States department of agriculture and the state agricultural colleges and experiment stations in agricultural research and education are strikingly brought out in the report of the director of the states relations service for 1922, just issued.

"There is", according to the report, "hardly a branch of agricultural inquiry in which there is not some form of cooperation." Altogether there are now 140 different research projects, involving 274 separate cooperative agreements between the department and the stations. The general effect of such cooperation has been to make agricultural research more efficient from a national standpoint.

In the interest of simplicity of administration the cooperative extension work of the department was reorganized during the year. Approximately 4,000 persons are now employed in the cooperative extension service and it is estimated that 2,500,000 farms and farm homes were reached through this means during the past year. The enrollment of farm boys and girls in club work was 491,000, 58 per cent of whom completed the required work and reported over $7,000,000 worth of club products. Especially gratifying progress is reported in the extension work organized for the benefit of the negro farmers of the South. There are now 270 negro field agents engaged successfully in this work. As a result of the work new homes are being built, old ones improved, and orchards, gardens and livestock are becoming the rule rather than the exception on farms owned by negroes.

## SAN FERNANDO VALLEY GRAPES

Professor F. T. Bioletti and his assistant, Mr. Jacobs, will hold two grape pruning demonstrations in the San Fernando Valley, January 16. During the forenoon one will be held at the Johnson ranch, Owensmouth. In the afternoon the other will be on the Budau ranch, San Fernando. At both places special attention will be paid to the cordon or espalier system. Some of this work was started by Prof. Bioletti last year, so that visitors will be able to see the results of one year's training under this system. On the 19th a pruning demonstration will be held in the Antelope Valley.

### A CHRISTMAS CAROL

There's a song in the Air!
There's a star in the sky!
There's a mother's deep prayer
And a baby's low cry!
And the star rains its fire while the Beautiful sing,
For the manger of Bethlehem cradles a king.

There's a tumult of joy
O'er the wonderful birth,
For the Virgin's sweet boy
Is the Lord of the Earth.
Ay! the star rains its fire and the Beautiful sing,
For the manger of Bethlehem cradles a king.

In the light of that star
Lie the ages impearled;
And that song from afar
Has swept over the world.
Every hearth is aflame, and the Beautiful sing,
In the homes of the nations, that Jesus is King.

We rejoice in the light,
And we echo the song
That comes down thru the night
From the heavenly throng.
Ay! we shout to the lovely evangel they bring,
And we greet in His Crade our Savior and King.

—J. G. Holland.

### THE GIFT

A mother was watching on Christmas night
Rocking her babe by the candle light,
And she lifted her eyes in the gath'ring gloom
For the Christ stood in her lowly room.

"What shall I give to thy child," he said—
Softly caressing the sleeping head
"Nay, said the mother, "O Angel guest,
Give her whatever thou deemest best."

"What shall I give her, O mother mild?
Ask what thou wilt for thy little child.
Shall I kiss her brow that her eyes may shine
With a beauty that men will call divine?"

"Shall I touch her lips that they may flow
With songs the sweetest the world may know?"
"Nay," said the mother, "that will not stay;
Songs are forgotten and hair turns gray."

"But what shall I give her?" he said
"Ask, and thou shalt not ask in vain."
And the mother lifted her eyes above,
"Give her purity, truth, and love."

And the Christ-child turned to her soft and mild
"Thou hast chosen the best for thy little child,
Be not afraid, tho' life be sore
I shall be with her forever more."

### SILENT NIGHT

Silent night, holy night,
All is calm, all is bright;
Round Thy children, Father on high.
Beams the light of Thy starry sky,
Sleep in heavenly peace.
Sleep in heavenly peace.

Silent night, holy night,
Shepherds pray at the sight,
Glories stream from heaven afar,
Golden beams from the eastern star;
Clomes the glorious morn,
Comes the glorious morn.

Silent night, holy night,
God on high, love's pure light
Radiant beams from Thy holy face,
With the dawn of redeeming grace,
Peace and heavenly love,
Peace and heavenly love.—Joseph Mohr.

### THE CHRISTMAS TREE

The trees were whispering soft and low
Together in the night:
"My fruit," observed the apple tree,
"Gives all the world delight."
"I feed the little squirrels," said
The hickory with pride;
"And I," the maple boasted, "shade
For man and beast provide."
"My boughs," proclaimed the fir, "are green
Through all the winter snow."
"I cradle," cried the ancient oak,
"The treasured mistletoe."
"Most blest am I of forest folk,
The children worship me,
Great is my glory," sang the pine,
"I am the Christmas tree."

"There is nothing that people will thank us more for at Christmas-time than a little pains taken to understand them and a little sympathy with what they are. If we give, let us give to them, and not to ourselves through them. For whether we give or not, it is sympathy, the capacity to see others as they see themselves, and do or feel for them what they want done or felt —that makes A Merry Christmas."

### THE EMPTY HOUSE

By Eveline Nutter in Successful Farming

IT was next to the lonesomest day in the year. Other homes were gay with Christmas greenery and the music of children's laughter. But this was no home, only an empty, empty house, where even the servants seemed to tread softly on the heavy rugs, for fear the sound of their footsteps would echo through the emptiness.

Dr. McLean himself felt the loneliness of it, as the trim maid led him to Mrs. Lanier's room, and the memory of the rogueish little girl who in the old days had filled the house to overflowing with love and happiness, caused him to sigh wearily. But there was not a sign of this momentary sadness in his voice as he closed the door behind him and held out his hand to the slender, dull-eyed woman sitting rigid and tense on the edge of a chair drawn up close to the open fire.

"Well, well, Margaret, how are you?" he inquired.

She disregarded the genial pleasantry of his greeting with a nervous shrug of her shoulders.

"I want some more powders, Dr. McLean. You'll have to give me morphine, or something—someway you'll have to help me through tomorrow.

"Is it that bad, Margaret?" he asked her gently.

"If I were just dying," she told him bitterly, "I wouldn't care—I'd be glad, I think. But—it's my mind." Her voice grew husky. "All the time I see little Alice, the way she looked, you know, all crushed." She shivered and drew her chair closer to the fire. "I can't sleep! I can't stop thinking, can I? I'm about half insane now."

Dr. McLean laughed. It was a nice, comfortable, reassuring laugh, the way one laughs at the groundless fear of a small child. But it did not deceive Margaret Lanier. Oh, no. She had heard him laugh that way before.

"Please," she begged, standing up and looking at him beseechingly, "you know it's true! Can't you do anything to save me?"

He looked at her again, at the dark shadows under her lusterless eyes, at her slim, restless hands. He wasn't laughing now. His shaggy gray brows were drawn down over his keen, narrowed eyes.

"I can't do anything," he growled, "because you are too pigheaded to take your medicine!"

Mrs. Lanier gasped. "You mean—?"

"Listen to me, Margaret Lanier, will you?" he boomed on, stamping around the room. "You are a spoiled baby. Until last summer you had everything you wanted, always. Health and money and friends—" Suddenly his voice softened. "And then the loveliest child I ever saw."

"And now," she moaned, burying her gray face in her hands, "and now I—have—"

"Your daughter is dead," Dr. McLean hastened on sternly, "your grief is natural enough. But you are so selfish, so insanely selfish, that you have not thought of your husband—I'm mighty sorry for Tom—you haven't thought of anyone but yourself. Look here girl! If you could see what I see every day—people, little children, suffering, starving, freezing to death. Bah! What do you know about life?"

He stopped and shook his fist almost in her face.

"You think I ought to give you morphine, do you? You warm, cozy petted, silly—little poodle dog!" he exploded.

Then at last the red flamed into her cheeks, and she sprang to her feet, with her eyes blazing, and faced him. She was very angry.

"How dare you talk that way!" she cried.

Dr. McLean only grunted, but a close observer might have mistaken it for a sigh of relief.

"I'll talk any way I want to," he snarled. "No, of course I haven't given you up. I'll stop in again some time this evening and for heaven's sake, woman, have your hair combed by that time!"

An hour later Margaret Lanier stood looking out into the softly falling snow. Her slim body, under the trailing folds of silk, was tense. One white hand was clenched so that the nails bit into the soft palm. Somewhere a clock chimed, and before it stopped, she heard old Dr. McLean's voice in the hall below, boisterous, rollicking, and following close upon it, mingled with it—children's laughter. It was unbelievable. No child was there, of course. Tom, the servants, no one would permit such a thing. For ever since little Alice had died, the sight of a child made her shiver. Had her last shred of reason gone? She went deathly cold. Then the sound came again,

**New Lamp Burns 94% Air**

**Beats Electric or Gas**

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, W. V. Johnson, 31 N. Fifth Street, Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

CHEAPEST HEAT YOU CAN BUY

The Sievert Oil Burner burns either distillate or kerosene oil in cook stoves, heaters, furnaces, pasteurizers, boilers, prune dippers, dairy sterilizers, etc. Absolutely safe, odorless, very convenient and low priced. MAKES HEAT AT HALF WHAT WOOD AND COAL COSTS. Install it yourself. Write for circular and prices on different sizes. Address Sievert Oil Burner Co., 710 North Main St., Los Angeles.

and her heart began to beat once more. She turned and ran to the stairway. On the landing she paused, staring with wide incredulous eyes at the scene below.

Tom Lanier, his fair face quite red with excitement, was expostulating with Dr. McLean, who was obviously ignoring him, his whole attention being given to the task of divesting two rosy, squirming little boys of tiny overcoats and mittens.

"I tell you, Tom Lanier," the Doctor roared, straightening up and shaking his fist under the young man's nose, "I tell you these children shall stay here until Thursday, and Alice has got to brace up—"

Then it was true. She was sane enough. She caught her breath with a moan and both men looked up to where she stood, leaning against the bannister.

In three strides her husband had reached her.

"Margaret dear," he tried to explain, taking both her cold hands in his, "Dr. McLean had hoped—but if you feel this way about it—I knew it was the wrong idea. I'll take them straight back to the orphanage myself."

"Silence, young man! You'll do no such a thing," stormed the old doctor, looking very ferocious.

Again he gave his attention to the children, who were looking around with eager, wistful eyes, not at all alarmed by his angry voice.

"Good night, David," he said cheerfully, to the older boy. "I hope you'll have a Merry Christmas."

Then he picked up the other, a plump, round-eyed baby, and tossed him high into the air.

He turned gravely to the man and woman on the stairway.

"Tom," he said, "I told Margaret plainly this afternoon that her chance of sanity lies in facing things as they are. Good night!"

Margaret gently drew her hands away from her husband.

"He means it kindly, I suppose," she sighed in a lifeless way.

"But does he think these little boys can take Alice's place? Tonight, of all nights—Christmas Eve—Oh, he is so foolish! So cruel!"

(Continued Next Week)

### A CHRISTMAS CAROL

God rest ye merry gentlemen; let nothing you dismay,
For Jesus Christ our Savior was born on Christmas Day.
The dawn rose red o'er Bethlehem, the stars shone thro' the gray
When Jesus Christ our Savior was born on Christmas Day.

God rest ye, little children; let nothing you affright
For Jesus Christ your Savior was born this happy night;
Along the hills of Galilee the white flocks sleeping lay
When Christ the Child of Nazareth was born on Christmas Day.

God rest you, all good Christians; upon this blessed morn
The Lord of all good Christians was of a woman born;
Now all your sorrows He doth heal, your sins He takes away;
For Jesus Christ our Savior was born on Christmas Day.

—Dinah Maria Mulock (1862).

## CRANBERRIES FOR THE HOLIDAYS

By Ramona Cordero

THE holidays are with us again, and it means we must think and plan for the holiday dinners. Cranberries can be used in many different ways. They are very successfully canned, which brings them on our table most any time of the year. Spiced cranberry jelly for instance served on slices of orange, arranged on lettuce leaves and garnished with cranberry cherries.

### Cranberry Cherries

Select large perfect berries. Pierce each berry with a large needle, make a thick syrup, using twice as much sugar as water, and boiling till it spins a thread. Remove the syrup from the fire and drop the berries into it slowly. Stir the syrup gently until each berry is covered. Do not add the berries so rapidly that the syrup begins to bubble, and do not add any more berries than the syrup can cover. Place the berries over the heat and bring to boiling point. Take off fire at once and set aside to cool. Repeat this process twice more, then remove the cooled berries from the syrup and drain on oiled paper.

### Candied Cranberries

Two cups large berries, 2 cups sugar, 2/3 cup water. Wash and dry the berries, pierce each one with a large darning needle, then spread the berries in single layer on large baking pan. Boil the water and sugar slowly for 5 minutes. Pour the syrup over the berries and place in a very moderate oven until transparent. Dust with pulverized sugar.

### Cranberry Sauce

One pint cranberries, 1 cup boiling water, 1 cup sugar. Cook the cranberries in the water until the skins are broken, press through a colander, add sugar, return to fire and let simmer for 5 minutes. Serve when cold. It can also be canned by placing in clear hot jars.

### Spiced Cranberries

One pint cranberries, ½ cup water, 1 cup sugar, 5 cloves, 1 allspice, 1 stick cinnamon 1½ inches long. Wash the berries, add the water and spice tied in a piece of cheese cloth. Cook till tender. Remove the spice bag, press the berries through a colander, add the sugar, and cook 10 minutes. Place in jelly glasses and when cold pour hot paraffin over top.

### Cranberry Ice

Four cups cranberries, two cups water, 2½ cups sugar, ½ cup lemon juice. Pick over and wash berries, add the water and cook till soft, press through a colander, add the sugar and lemon juice. Stir well together, and freeze.

### Cranberry Salad

One tablespoon Jell-O softened in 4 tablespoons cold water, 1½ cups thin cranberry pulp, ½ cup sugar, 1 cup thin sliced celery, ¼ cup chopped walnuts. Combine Jell-O, sugar and cranberry pulp, bring to boiling point. Set aside to cool. When mixture begins to harden, add celery and chopped nuts. Serve with sour cream dressing.

Sour Cream Dressing—One-half cup thick sour cream, 1½ tablespoons vinegar, 1 tablespoon sugar, a good dash of salt, paprika and mustard. Whip cream with Dover egg beater, add the vinegar and the dry ingredients slowly. Beat till thick and smooth.

### Cranberry Pudding

Two cups berries, 1 cup seeded raisins, 1 cup chopped suet, 1 cup bread crumbs, ½ cup sugar, 1 cup flour, 1 teaspoon salt, ½ teaspoon cinnamon, ½ teaspoon cloves. Select large berries, wash and cut in halves, mix all ingredients together and add just enough water to make a very stiff mixture. Stir well and place in tight can and boil in hot water for 3½ hours. Serve with plain vanilla sauce.

"A Bible entry: 'Born, a girl,'
A knitted shoe, a golden curl,
A woolly lamb, gay colored blocks,
Some wee worn garments in a box,
Some dog-eared books, a pair of skates,
Old photographs of all her mates,
Boarding school letters full of jokes,
And 'love to all the dear home-folks,'
A glove, a program from a dance,
A rose pressed in an old romance,
A rain of rice along the hall—
Tears on my cheeks and that is all!"

A comfortable church

A Christmas Gift for Your Church

That will increase attendance during the chilly, rainy months is

The Estate Heatrola

It circulates warm, odorless, sterilized air throughout six connecting rooms or their equivalent, providing uniform heat. This means that the air in your church is always fresh and free of fumes, and that those seated furthest from the HEATROLA are as comfortable as those nearest it.

The principle upon which it operates is scientific, yet simple and interesting. Send the attached coupon for further information.

## The Cultivator Patterns

**4178. Ladies' Dress**—Cut in 7 Sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38 inch size requires 3⅝ yards of 54 inch material. The width of the dress at the foot is 2¾ yards. Price 10 cents.

**4188. Girls' Dress**—Cut in 4 Sizes: 4, 6, 8 and 10 years. A 6 year size requires 3 yards of 32 inch material. Price 10 cents.

**4180. Ladies' Apron Dress**—Cut in 4 Sizes: Small, 34-36; Medium, 38-40; Large, 42-44 Extra Large, 46-48 inches bust measure. A Medium size requires 4⅝ yards of 32 inch material. The width of the skirt at the foot is 2¼ yards. Price 10 cents.

**3438. Two Dainty Aprons**—Cut in 1 Size: Medium, No. 1 will require ⅞ yard of 36 inch material; and No. 2 will require 1¼ yards. Price 10 cents.

**4172-4174. A Stylish Street Costume.**—Coat 4172 cut in 7 Sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It will require 3½ yards of 44 inch material, for a 38 inch size. Skirt 4174 cut in 7 Sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. The width at the foot is 2⅝ yards. To make this style for a 31 inch size will require 3⅜ yards of 44 inch material. Two separate patterns 10 cents for each pattern.

**3841. Girls' Dress**—Cut in 4 Sizes: 6, 8, 10 and 12 years. A 10 year size will require 2¼ yards of 27 inch material for the guimpe and 3¼ yards for the dress. Price 10 cents.

**4183. Ladies' Bloomers.**—Cut in 4 Sizes: Small, 27-29; Medium, 31-33; Large, 35-37; and Extra Large, 39-41 inches waist measure. A Medium size requires 1⅞ yard of 36 inch material. Price 10 cents.

**3770. A Dainty Boudoir Set**—Cut in 3 Sizes: Small, Medium and Large. The Cap No. 1 will require ¾ yard of 27 inch material. No. 2 will require ⅝ yard. One Pair off Slippers will require ⅜ yard for a Medium size. Price 10 cents.

**CATALOGUE NOTICE**

Send 12c in silver or stamps for our Up To Date Fall and Winter 1922 Catalogue. This is even better than the Spring and Summer number. It will have 8 colored plates, the same as the last catalogue, but a great many of the other pages will be arranged in plate form, so that the Fall and Winter Catalogue will be more like a fashion book than a pattern catalogue. It will also include points for the needle and hints for the home dressmaker.

**PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH**

**HOW TO ORDER PATTERNS**

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very best NEW YORK styles, all patterns ordered are filled in NEW YORK. Do not expect patterns under **Two Weeks** from date of order.

## HOUSEHOLD QUERIES

### Potatoes au Gratin

Kindly print recipe for potatoes au gratin.—Subscriber, San Diego.

Cut cold boiled potatoes into dice, season with salt and pepper and place a layer in baking dish. Sprinkle with fine crumbs and one tablespoon finely minced onion, 2 tablespoons finely minced parsley. Add a second layer of the diced potato and season, then pour over 2 cups white sauce. Sprinkle with fine crumbs and a little grated cheese and bake in moderate oven 25 minutes.

The white sauce is made by melting in saucepan over slow fire 2 tablespoons butter, adding 2 tablespoons flour, mixing to smooth paste, adding gradually 1 cup milk or mixed milk and water. Cook, stirring constantly until mixture thickens. Boil a few minutes to thoroughly cook the starch, taking care that it does not scorch. Add more milk or water if thinner sauce is desired.

### Uncooked Candies

Will you please print in the Cultivator recipe for cold candies? I wish some uncooked candies for Christmas and I am sure I will find help in the Cultivator.—Subscriber, Porterville.

Uncooked Fondant—Beat the white of one egg and add to it one teaspoon of cream. Roll and sift one pound of powdered sugar, and stir into the egg and cream mixture to make a stiff cake; a trifle more may be necessary for molded shapes. Divide the cake into several pieces, and add to one a little melted chocolate and vanilla to flavor. To another part add a few drops of fruit juice and flavor with rose Color another part with a bit of yellow vegetable coloring paste, and flavor with lemon. Mints are made by using green color paste and a drop or more of oil of mint. This simple recipe will furnish employment of a pleasant sort for a tableful of children. When the candy is molded, lay it on greased paper, cover with another paper and put in a cool place.

Candy Loaf—Into a square tin that has been dipped in cold water pack a layer of white fondant and press it down firmly and evenly. On top of the layer of white place a layer of pink; press into place; on top of the pink layer place another of chocolate or yellow. When ready to unmold and cut sift confectioner's sugar over the top and sprinkle it over the hands; then run a sharp knife around the edge of the tin to loosen it and turn out on a board dusted with sugar.

Plum Pudding Bars—Chop very fine two ounces each of candied orange peel, currants, Sultana raisins and dates. Beat the white of an egg slightly, add a tablespoon of water, and mix all together until smooth, add enough confectioner's sugar to form a stiff paste. Mold into a loaf, and brush over with melted chocolate. Let the mixture dry for at least two hours. When dry turn the sweet over on a greased paper, and brush the other side with chocolate. When set, cut up into neat bars with a knife.

Nut Creams—Shape a stiff paste or fondant into small balls between the fingers and press between halved walnuts. Dates or small pieces of fig or candied cherries may be used in the same way.

Chocolate Creams—Form firm balls of good stiff fondant between the fingers, place on a greased paper and set away to dry. Melt confectioner's chocolate over hot water and dip the balls in.

Orange Strips—Chop crystallized orange peel into small pieces. Mix with fondant. Cut into long strips, wrap in yellow paper or tie with orange colored baby ribbon. Chopped figs, dates, nuts and coconut may be substituted.

Fruit Paste—Put one cup raisins, one cup stoned dates, one cup figs, and two cups mixed nuts through the food chopper twice. Mix with enough confectioners' sugar to make a dough sufficiently firm to roll on a board sprinkled with confectioners' sugar. Knead as you would bread. Then roll out one-half inch thick and cut into squares. Dust with the sugar and lay away in tin boxes lined with waxed paper.

Date Dainties—Stone dates, stuff with tiny rolls of peanut butter, walnut meats, pecan halves, bits of candied ginger, pineapple or cherries, roasted almonds or fondant flavored with lemon juice. Then roll in pulverized or granulated sugar.

Note directions in last week for making California Christmas Loaf.

### Raisin-Nut-Jels

If it would not be too much trouble would you kindly send me the recipe for raisin-nut-jels which you published in your list of candies for Christmas last year.—Subscriber, Bakersfield.

Soften two tablespoons gelatin in half cup of cold water and add juice of one lemon, juice and grated rind of one orange. Heat one cup sugar in half cup water, and when it boils add the gelatin and juices. Boil ten minutes, add cup raisins or ground dried fruit and boil ten minutes more, stirring. Take from the fire and add one cup nut meats and pour into a shallow greased pan; square, if you have a square pan. Stand over night, cut in squares and roll in powdered sugar.

### Chicken Mincemeat

Please give me through the Cultivator recipe for mincemeat where chicken is used instead of beef.—Subscriber, Selma.

Half cup suet, half cup grated carrot, 6 cups apples chopped fine, 2 cups seeded raisins chopped, half cup cooked chicken chopped, half cup citron chopped fine, half cup orange peel chopped fine, 2 tablespoons cinnamon, half tablespoon nutmeg, 1½ cups molasses, 1 cup boiled cider. Mix in order given; pack in bowl or crock, cover closely and set in cold place until used.

### Fruit Cakes

Please publish recipe for fruit cakes as were published last year in the Cultivator, as we lost our last year's Cultivators in moving and would like to have the recipe.—Subscriber, Santa Cruz.

Old English Plum Cake—Three-quarters of pound of sifted flour, one teaspoon salt, one teaspoon each of nutmeg, cinnamon and mace, three-quarters pound butter, three-quarters pound sugar, eight or nine eggs, two and a half pounds raisins, three-quarters pound citron, half pound shelled almonds, half pound Brazil nuts, three-quarters cup apple cider, half cup dark molasses. Pass flour, salt and spices together through a sifter, then rub the butter thoroughly into them. Place the sugar (dark brown) in another bowl, add yolks of eggs and beat until thick. Add this to the flour and butter and again mix well. Then put in the raisins, add the almonds blanched and cut and the nuts chopped. When all are well blended mix in the molasses and the cider and lastly fold in the well beaten whites of eggs. Line cake tins with greased paper, pour in cake batter and bake in a very slow oven. If it is all in one cake, bake four hours. If possible make cake some weeks before using, so as to give it time to ripen before cutting. This is an excellent recipe.—Mrs. C. R. Valentine, Triumfo.

Dried Apple Fruit Cake

Soak three cups of dried apples over night in cold water enough to swell them; chop them in the morning and put them on the fire with three cups of molasses; stew until almost soft; add a cup of seeded raisins and stew a few minutes; when cold add three cups of flour; one cup butter, three eggs and one teaspoon of soda. Bake in a steady oven. Raisins may be omitted; also spices may be added to taste. This is not an expensive but a delicious cake.—Mrs. Ben H. Norton, Artesia.

Fruit Cake

One pound butter, one pound sugar, one cup molasses, one cup coffee (one tablespoon coffee to a cup of water), seven eggs, six teacups flour, two pound currants, half pound raisins, half pound citron, one nutmeg, one teaspoon cloves, one teaspoon cinnamon. Beat butter and sugar to a cream. Add yolks of eggs, spice, coffee and molasses, beating well, then add beaten whites of eggs and fruit. When eggs and butter are high priced we substitute for butter cooking oil (two cups for seven eggs) and two eggs, adding one cup corn starch and one glass jelly. Be sure to have batter as stiff as can be stirred with spoon. Best when steamed or baked in fireless cooker, but may be baked in oven.—Margaret Cuddebach, Sanger.

Aunt Hannah's Fruit Cake

Six eggs, two cups light brown sugar, one cup molasses (preferably sorghum) one and a half cups butter, one cup sour milk, five cups flour, two level teaspoons soda, one and a half pounds raisins, one and a half pounds currants, three-quarters of a pound of citron or candied orange peel, half tablespoon cloves, half tablespoon cinnamon, half tablespoon allspice, one nutmeg. Currants and raisins must be washed thoroughly and dried then floured before being added to the cake. Steam three hours, then dry half hour in moderate oven.—Mrs. H. L. Summers, Bozeman, Montana.

Good Fruit Cake

Eight ounces seedless raisins, eight ounces currants, eight ounces sugar, four ounces candied peel, eight ounces butter, 16 ounces flour, one teaspoon baking powder, half teaspoon salt, one cup milk, two tablespoons corn syrup, four eggs, nutmeg to taste. Cream butter and sugar, add fruit. Stir well, add flour, baking powder and salt sifted together alternately with eggs, breaking one egg at a time into the cake. When it becomes too stiff to stir add milk. Bake in moderate oven. —Mrs. Charles Smyth, Hemet.

Fruit Cake

Two cups sugar, five eggs, beaten separately. half cup butter, one cup sour cream, one level teaspoon soda, one level teaspoon baking powder, half pound seeded raisins, half pound currants, quarter pound citron, one teaspoon ground cloves, one teaspoon ground cinnamon, one teaspoon ground nutmeg, three level cups flour. Cream butter and sugar together. Beat eggs separately, add yolks. Dissolve soda in a little water, add to the sour cream. Sift flour with baking powder. Add fruit and spices. Dredge the fruit with flour to prevent settling to bottom of cake. Beat well. Add the flour and lastly the whites, beaten well. Line a tube cake tin with well greased paper. Bake in a slow oven one hour. Cover when cold with boiled icing.

This cake took the first premium for years at a Kansas county fair and always found ready sale when the fair was over.—Mrs. A. H. Stewart, Visalia.

Christmas Fruit Cake

So often one hears the objection that fruit cakes are not only expensive, but rich and indigestible. The following recipe makes an excellent cake which is neither costly nor too rich. Sometimes in place of currants I use chopped dried figs. One cup butter, one cup brown sugar, half pint cooking molasses, two eggs, one cup sour milk, one teaspoon soda, one pound flour, one pound dried currants, one and a half pound raisins, a little citron.—Mrs. Floy Crosby Smith, Fairoaks.

Eggless Fruit Cake

This is a good recipe for eggless fruit cake. We like it better than the other kind and it doesn't cost so much. One cup sugar, one teaspoon lemon, half teaspoon cloves, one teaspoon nutmeg, butter the size of an egg, one cup of flour to make dough as for cake, half cup raisins, half cup currants, half cup nuts, one-third cup citron (or any kind of peel), one cup of sour milk in which you put one and one-third teaspoons of soda. Then stir in cake. Bake in round cake pan until well done.—Mrs. Peter Esordi, Glenburn.

### Glazed Oranges

Can you please publish in the household queries directions for glazing oranges, that is coating the whole sections with candy?—Subscriber, Covina.

Peel oranges and divide into sections, carefully removing every bit of white inner rind but leaving the thin membrane enclosing sections unbroken. Dissolve 1 pound sugar and 3 drops lemon juice over slow fire, cooking until slightly straw colored. Put on back of stove or slightly warm place and with fork dip each section separately, turning till evenly coated. Place on waxed paper in cold place to harden. Nuts or grapes may be coated in same manner.

## FRUIT GROWERS AND FARMERS GATHER IN 55th CONVENTION

(Continued from Page 659)

the public and lead to acts of violence. We strongly recommend legislative or other actions that can and will prevent strikes affecting the transportation facilities of the United States. It is also the sense of this convention that regional labor boards should be appointed by the administration or congress to take up and pass upon any question of wage or other disputes between executives of railroads and their employes and that their decision should be final and accepted by both parties.

Resolved: (a) That this convention opposes on principle the horizontal method of increasing freight and express rates.

(b) It believes that the remainder of the last 33 1/3 per cent advance in freight rates and the 26 per cent advance in express rates on interstate shipments of fruits and vegetables should immediately be eliminated.

Resolved: In view of proposals made to this convention having in prospect the inauguration of supplemental waterway service for the transportation of our agricultural products to the consuming centers of Atlantic seaboard, and believing that the installation of such service would in large measure relieve the difficulties heretofore experienced and likely to occur in the future in rail transportation, due to greatly increasing tonnage which calls for movement, we commend to the growing and shipping interests of the western coast states support and encouragement to the realization of a permanent efficient waterway service to meet existing and future demands of western farmers.

The following is a list of delegates, members of the committee, who drafted the above resolutions: Thos. O'Neil, president, California Vegetable Union. C. O. Cornwell, Traffic Manager California Fruit Distributors. M. E. McKirahan, Traffic Manager, California Fruit Distributors. H. E. Cole, Traffic Manager, California Fruit Exchange. Frank R. Spinning, Department of Public Works, Olympia, Washington. W. E. Miller, Traffic Manager, North American Fruit Company, Wenatchee, Washington. J. M. Wade, Wells & Wade Fruit Co. (Shippers) Wenatchee, Washington. O. B. Shay, Fruit Growers, Wenatchee, Washington. W. J. Urquhart, Manager Yakima Valley Traffic & Credit Association, Yakima, Washington. H. O. Berger, Department of Public Works, Olympia, Washington. George E. Erb, President Public Utility Commission, Boise, Idaho. A. V. Kipp, Representative Chamber of Commerce & Commercial Club, Salt Lake City, Utah. J. N. Burns, Northwest Canners Association, Portland, Oregon. A. W. Stone, General Manager Apple Growers Association, Hood River, Oregon. Representative of Hood River Traffic Association.

* * *

The best expression of the work of the three days is given in the resolutions which follow. These are almost every one given in full exactly as passed.

### RESOLUTIONS

**Water Transportation**

Whereas, the California fruit and agricultural industries face large increases in production and possess possibilities of tremendous expansion providing adequate transportation facilities are available to transport our products to world wide markets; and

Whereas, great benefits have been derived from increased water transportation facilities and low rates to East Coast and foreign ports; and,

Whereas, if there are to be increases in shipping facilities and maintenance of low rates for water transportation, American shipping must be encouraged and supported by governmental interest and action; and,

Whereas, the president of the United States has recommended such governmental action and support and urged the congress of the United States to pass legislation to such effect, which legislation is now before the United States senate:

Now Therefore, Be it Resolved that the 55th convention of Farmers and Fruit Growers heartily endorses such legislation in support of American shipping interests and commends it to our senators, the Honorable Hiram Johnson and the Honorable Samuel M. Shortridge, and urges them to actively support and vote for the adoption of the pending legislation on this subject.

**New Quarantine Regulations**

Whereas: the growing of fruits and vegetables is California's greatest industry and an industry of very great proportions in other states, and

Whereas: improvements in ocean transportation with particular reference to movement under refrigeration have made possible shipments of fresh fruits and vegetables for distances that were unthought of when present quarantine regulations were enacted, and

Whereas, we are convinced that under present quarantine regulations the Mediterranean and other fruit flies might gain entry into the United States; now therefore be it

Resolved: That the fruit growers and farmers of California assembled on the occasion of the 55th Fruit Growers and Farmers Convention at Sacramento, December 14, 1922, do most earnestly urge the federal horticultural board to enact new quarantine regulations that will prevent shipment into the United States of any host fruits of the Mediterranean or other fruit flies and that will also protect the fruit growers and farmers of the nation against all other destructive pests.

**Congressional Aid to Keep Out Fruit Fly**

Whereas, it is the unqualified opinion of the members of this convention that the Mediterranean fruit fly and other species of fruit flies present a grave menace to the fruit industry of California; and

Whereas, Secretary of Agriculture Wallace has issued a notice of public hearing to be held in Washington, D. C., on December 19, to consider the advisability of restricting or prohibiting the entry of all fruits and vegetables from all foreign countries on account of fruit flies; and

Whereas, this public hearing is of the utmost importance to California, and California must be forcefully represented at the hearing to conserve the interests of this state;

Now, Therefore, Be it Resolved that it is the sense of this convention that the United States senators and members of congress from California can render no greater service to California than by being present at the hearing to urge the extension of the fruit fly quarantine to exclude all host fruits of all species of fruit flies from all countries where fruit flies exist.

Be it Further Resolved, that this resolution be sent to all United States senators and members of congress with the urgent request that they be present at the hearing to support California's interests.

**Frozen Oranges**

Whereas: Great harm has come in the past to our citrus industry and to our state, and is likely to come again by the shipment into the markets of citrus fruits injured by frost, and

Whereas: a portion of the state regulations providing for the exclusion from such markets of such frosted fruit have been declared by the courts invalid, now therefore be it

Resolved: that this convention approves the purpose embodied in such void regulations and recommends the enactment at the approaching session of our state legislature of appropriate legislation to secure such exclusion.

**Efficiency of State Department**

Whereas: our present state department of agriculture has been developed so effectively and accomplished such splendid results far in advance of anything done heretofore in this direction, under the leadership of Director G. H. Hecks, now therefore be it

Resolved: that this 55th State Fruit Growers and Farmers Convention expresses its satisfaction and approval of the accomplishments and his administration of this important department.

**In Memoriam**

Your resolution committee suggests that the director of agriculture appoint a committee to draw up resolutions in relation to deaths of G. Harold Powell, Col. Harris Weinstock and Dr. J. C. Whitten.

**Thank Chamber of Commerce**

We wish to express our appreciation of the efforts of the chamber of commerce towards making the convention a success. Never has a city been more openly hospitable and free with the resources at its command than has Sacramento during this week; and be it further

Resolved that we express our appreciation of the work and interest of the individual members of the various organizations which have aided in this work; especially do we thank Senator C. B. Bills whose untiring efforts have helped to make this 55th State Fruit Growers and Farmers Convention one of the most successful in the history of state conventions.

### CONVENTION NOTES

Secretary Dudley and Senator Bills proved royal hosts and were at every point where service could be rendered.

President Sheehan of the Grape Growers is enthusiastic on water transportation. Possibly his enthusism comes because of the fact that he has tried it and failed to the extent of a loss of over $2,000. But he still insists that the lessons of the failure convince him that water transportation will yet lift the load from the railways until refrigerator cars available will be sufficient to move California's fruits.

It was announced during the convention that steps are being taken to organize a company which shall be capitalized and made strong enough to put forth persistent effort to equip ships with modern refrigeration for handling California products. This company will not only take up consideration of transportation matters but terminals and the working out of other details for the eastern end.

George Ashley of Lodi made statements showing rank discrimination against Tokay shippers. Where some sections were given more cars than they had last year Lodi fell short something more than 40 per cent of last year's allotments. He insisted that "Troubles are not all because of the action of eastern terminal lines."

There was unanimity of belief by fruit producers attending the convention that some force strong enough to care for the products of the country must be raised or the permanent prosperity of the producing sections of California will be jeopardized.

Wilmer Sieg, manager California Fruit Distributors, suggested that much of the transportation troubles is due to dilatory and inefficient service. Cars loaded with California fruits required 21 days for delivery where half that should have been sufficient. This caused loss because of deterioration of the fruit and greater loss because of the car being held out of commission when it should have been in active service.

The railroad men present insisted that the other fellow was to blame, and this caused a tart retort from a Seattle delegate who insisted that railway officials are always passing the buck to the other fellow, not one ever being willing to take responsibility for failure.

President Sproul of the Southern Pacific was not present but Vice-president McCormick made eloquent defense of the railways.

As a rule the shippers gave credit to the Southern Pacific for giving the best service possible and admitted that the greater part of the trouble was due to indifference of eastern lines in refusing to move out empties, even worse, of confiscating western cars and in pressing into use on eastern roads.

Interstate Commerce Commissioner Campbell begged attendants at the convention to consider the transportation question as a national issue. "It concerns every shipper, whether in Maine, Florida, California or Michigan, and you must not try to secure relief by making it a local or coast issue."

J. A. Gilkey of Corvallis, Oregon, was present and said that he was the packer of one of the first full cars of fruit sent from California. This was in 1872, the car going by express at a cost of $1200. It was shown afterwards, however, that there were several hundred cars shipped out of California before that date, some 600 having been forwarded in 1869.

### COUNTY HORTICULTURAL COMMISSIONERS

The state association of county horticultural commissioners held its annual meeting during convention week at Sacramento. The work of the week was partly given up to the study of efficiency and discussion of the problems of more effective law enforcement. Amongst other addresses before the commissioners was one by J. A. Story, public service commissioner of Queensland, Australia. Mr. Story is in the United States studying fruit growing problems and investigating as to quarantine regulations.

Officers elected for the coming year are: President, Fred P. Roullard, Fresno County; vice-president, John P. Coy, San Bernardino County; secretary-treasurer, A. H. Call, Ventura County.

### BARLEY CARRY-OVER LIGHT

According to the figures compiled by the California Farm Bureau Exchange, the carry-over of the 1922 barley crop will probably not exceed 35,000 tons. Considering that there were 100,000 tons carried over last year, this looks fairly good for the grain men. Another very encouraging feature is increased consumption of barley as feed for livestock. This would tend to indicate a very wholesome condition of the barley market.

Riverside district's pre-holiday shipments of Navels have averaged nine cars a day.

Stauffers' Copper Carbonate

**The New Remedy for Smut Control and Seed Disinfection**

This new method is far superior to the old Bluestone and Formaldehyde wet method. It is used dry, which makes its use easy and economical. It saves time—It saves work—It does not injure the seed wheat or retard growth—It permits the wheat or other grain to run freely through the drill and increases the yield.

Stauffers' Copper Carbonate is highest in quality and ground dust fine.

# Just how *does* Kow Kare increase the milk yield ?

Maybe you have been a regular user of Kow-Kare in treating cow diseases, but you may have never fully realized that this famous cow medicine is being used regularly in thousands of dairies to increase the winter milk yield.

Both uses are equally logical. Cow Diseases — nearly all of them — arise from a lowered vitality of the genital and digestive organs. Kow-Kare removes the cause by reaching these very organs and restoring vigor. The milk yield is controlled by the same set of organs. Dry winter feeds put a greater strain on their functions and produce a lowered vitality and yield.

Kow-Kare, fed moderately and regularly, gives to the milk-making organs the added strength they need to offset winter feeding conditions. A greater milk yield cannot fail to result.

The expense of this Kow-Kare treatment is decidedly small. Most dairymen give a tablespoonful morning and evening in the feed, one week out of each month. The increased milk-profit pays for this a hundred-fold.

No cow medicine can equal Kow Kare for the treatment of actual disease. For twenty-five years it has been the standard remedy for *Barrenness, Abortion, Retained Afterbirth, Scours, Bunches, Milk Fever, Lost Appetite.*

**FREE Cow Book**

We publish a very valuable book on cow diseases called, "The Home Cow Doctor" We will gladly send you a copy free if you give us your dealer s name

Sold in two sizes—large package $1 25; medium 65c, at feed dealers, general stores, druggists, If your dealer is not supplied, we send postpaid.

# Livestock News Notes

At a recent meeting of the board of directors of the California Holstein-Friesian Association plans were completed for holding the 1923 Guaranty Sale in Tulare the first week in April. This will be the sixth annual Guaranty Sale held by the Association, which has come to be one of the big annual events in the livestock circles of the Pacific Coast. This season the association officers are planning to make the event of special interest to breeders by offerings of high class Holsteins far above any other Pacific Coast sale. The selection committee will go into the best herds of the state and select animals with the richest pedigrees, great production records and highest breed conformation. It is not expected that this year's average price will reach that of past Guaranty Sales, but the breeder who is after foundation blood lines will have a chance to select the best at this sale at reasonable prices. As on previous years this sale will be under the management of Secretary Chas. L. Hughes and a committee of the association and conducted by the California Breeders Sales and Pedigree Company with Col. Ben. A. Rhoades on the block.

Prof. William M. Regan, in charge of the dairy production work of the University of California, met with the directors of the California Holstein-Friesian Association, at Modesto, December 4. Professor Regan is planning an active campaign in this department during the coming year and is getting in touch with the dairymen of the state with a view of finding their needs and how they may best be served by this department. The directors went on record as approving the campaign outlined by Professor Regan and passed a resolution not only indorsing it, but going farther and asking the state legislature to provide funds for at least one more dairy extension expert to work directly under the animal division of the college of fagriculture at Davis farm.

Ferdinand R. Bain, owner of La Lomita Rancho, Palms, has added 16 more top notch registered Jerseys to his already famous herd. The above mentioned string of good ones came from the Ogden Mills' Inkerkill Farm at Staatsburg-on-the-Hudson, one of the great Jersey herds of the world. Mr. Bain was fortunate in securing three daughters of Sybil Gamboge, the Jersey sire that sold last season for $65,000. The shipment also included a son of this famous sire.

Harry L. Millerd, a successful dairyman of Long Beach, purchased during November two registered Holstein-Friesian cows from Ralph Marr of Chino. Both of these cows are of excellent breeding and have made creditable records for Mr. Marr. Johanna Pontiac Idyl is a splendid cow sired by that good bull Sir Pontiac Konig Lyons and is out of the producing cow Netherland Johanna Idyl. The other cow, Gem Lyons Konig, is also an outstanding individual sired by the same bull and out of a record cow. Last summer Mr. Millerd purchased a young bull from the California Junior Republic herd. This bull is out of a 28 pound three year old and sired by the Republic's grand champion bull. Mr. Millerd expects to work his entire herd into purebred Holsteins and has a splendid start in the animals already purchased.

The directors of Calfoirnia Holstein-Friesian Association met at Modesto on December 4 and acted upon a number of important matters. Nine new members to the state association were admitted. Favorable action was taken upon a recommendation that the California college of agriculture employ an additional dairy extension specialist, and that all dairy extension men work under the direction of the division of animal husbandry, University Farm, Davis. April 4, 1923, was set as the date for the next annual guaranty sale, and Tulare designated as the place of sale. The board also went on record as favoring an active urge upon all Holstein breeders in California to put as many of their cows on semi-official test in Division B as possible in addition to those they regularly carry on semi-official in the regular classification. Division B is the classification which admits records made on two time a day milking, and it is felt these records will be valuable particularly in providing bulls out of tested dams for grade dairy herds.

A cow owned by Fred De Vries made 104.4 pounds fat in November and headed the list of the Southern L. A. County testing association. The high herd average was 50.9 pounds on the herd owned by P. T. Dykenel.

Two records recently completed by registered Holstein cows in the George Junior Republic herd at Chino call for much more credit than the bare records indicate. Juliana Darington of Rock, mature age, made 819.9 pounds butter from 19,948.9 pounds milk, and Queen Canary Lyons Segis, a senior three year old, made 649.98 pounds butter from 19,849.9 pounds milk, and records for 365 days. Both cows were milked and cared for by boys under 16 years of age as part of a high school project, thereby making a splendid educational contribution in addition to the substantial merit of their production.

Stella Burke Colantha, a first calf 3 year old daughter of El Prado Wayne Colantha, owned by H. G. Ball, Tulare, recently made 19.45 pounds butter from 419 pounds milk in seven days.

M. P. Christensen, Norwalk, has completed some excellent records in his small herd of high class Holsteins. Melba Hengerveld, possibly the best known 30 pound daughter of Arcady Pontiac Wayne Hengerveld, becomes a 30 pound repeater, by producing 30.41 pounds of butter from 601.7 pounds milk in 7 days at 11 years of age. Her granddaughter, Eldorado Veeman Segis, that is out of a daughter of Sir Veeman Korndyke Pontiac, and is herself sired by King Sadie Vale Idyl Segis, calving at 3 years 2 months, made 31.20 pounds butter from 527.8 pounds milk. Marken Louise, with a previous record of 35.50 pounds butter in 7 days, repeated with 34.20 pounds butter from 629.9 pounds milk.

Miss Alcarta Pontiac Segis, a second calf daughter of the famous King Segis Alcartra Prilly, at 3 years 6 months has made 29.52 pounds butter from 568.9 pounds milk in 7 days. This record was made three weeks after she completed a 365 day record of 723.9 pounds butter from 18,737.4 pounds milk, as a junior 2 year old, carrying calf 251 days of test. She is owned by Bridgford Holstein Co., Patterson.

Lady Veeman Happy Thought, a senior 3 year old daughter of Sir Veeman Korndyke Pontiac, owned by Earl Graham Compton, becomes the California state record senior 3 year old for both milk and butter production in the 305 day division with 828.34 pounds butter from 17,492.4 pounds milk. S. V. K. P. Melba of Sunnyside, another daughter of Sir Veeman Korndyke Pontiac and the 30 pound cow Melba Hengerveld, made 28.19 pounds butter from 563.8 milk in 7 days as a senior 4 year old. Miss Segis Pontiac Walker, a junior 3 year old daughter of King Pontiac Netherland Segis 3d, finished a 305 day test with 776.9 pounds butter from 17,573.8 pounds milk.

Mona's Eurybia owned by Winsor Ranch, Bonita, is the new champion senior 4 year old of the state. She started her test at 4 years 6 months of age and in one year her production totaled 10,262 pounds milk and 570.98 pounds butter fat. Five of the months on test her production exceeded 50 pounds of butterfat.

A new California state record holder has been developed at Santa Anita Rancho, Santa Anita, in Isabella Korndyke Pontiac Walker that has just finished a 305 day record of 852 pounds butter from 21,345.8 pounds milk, as a

senior 2 year old, her butter record being a state record in class and division. She proved a remarkably persistent producer, her best day's milk being 79 pounds and only once during the ten months did she fall below 60 pounds. Her half sister, Anoakia King Korndyke, made 24.43 pounds butter from 497 pounds milk in 7 days as a junior 4 year old. Both of these good heifers are sired by the noted King Korndyke Pontiac 20th, the $12,000 son of Miss Valley Mead De Kol Walker now owned by Sargent Bros., Tulare, and both heifers have just been sold to D. L. Wright & Son, Pasadena, as additional foundation material for the high class herd they are assembling. Other records recently completed at Santa Anita Rancho include Miss Riverside Walker Wase, a daughter of Prince Riverside Walker that made 797 pounds butter from 18,393 pounds milk in 365 days as a junior 3 year old. Burbank Mabel De Kol Niko, a senior 2 year old daughter of the 1,000 pound cow Mabel De Kol Niko 2nd, finished with 784 pounds butter from 17,642 pounds milk. Her dam is again on test and is quite certain to pass the 1,100 pound mark this year. A senior 2 year old daughter of Prince Walker Cornucopia, he a 36 pound son of Prince Gelsche Walker, is now in her ninth month and promises to exceed 1,000 pounds butter and 27,000 pounds milk.

---

P. M. Longan, Tulare, has purchased one-third interest in the great young sire Sir Aaggie Mead, previously owned jointly by W. J. Higdon, Tulare, and F. S. Borror & Son, Tipton. This materially widens the opportunity he will have, as he will now see heavy service in three of California's choice herds.

---

The foundation of Mr. Longan's herd was selected with great care, and official testing has just now commenced. Brinka Pontiac Hengerveld, a junior 4 year old, made 29.22 pounds butter from 538.6 pounds milk in 7 days, and 115.59 pounds butter from 2350.5 pounds milk in 30 days. California Juliana Bess, a six year old cow, made 27.3 pounds butter from 534.3 pounds milk in 7 days and 99.75 pounds butter from 2318.3 pounds milk in 30 days. She is a three-quarter sister to the noted three full sister "Agnes" heifers now making splendid yearly records at University Farm, Davis. Manteca Colantha Korndyke Walker, a junior 4 year old daughter of King of the Black & Whites, made 25.54 pounds butter from 547.4 pounds milk, right out of pastures, and has milked as high as 96.6 pounds. Hertinga Willis Pontiac a senior 2 year old daughter of King Korndyke Pontiac 20th and the 1,000 pound cow Hertinga Willis, made 19 pounds butter from 430.1 pounds milk in 7 days. Leah Abbekerk, a junior 2 year old daughter of Segis Pontiac Abbekerk, made 21. pounds butter from 452.9 pounds milk in 7 days. Four other 2 year olds made from 14.47 to over 17 pounds butter in 7 days and out of this lot of good producers Mr. Logan was fortunate enough to secure a splendid percentage of heifer calves sired by Sir Aaggie Mead.

---

J. A. Brown of Capitola is having no trouble in disposing of his young Guernsey males as most of them are from A. R. dams and his herd has never had a reactor. P. L. N. Larsen of Petaluma recently bought a bull out of the cow, Imp. Nancy II of Les Merriennes who has a record of 672 pounds fat. John Rapp of San Francisco bought one out of Imp. Carmencita Vivandiere who has just finished test with 577 pounds fat in class AA.

---

The initial sale of Poland China hogs held at the Gemmill Ranch near Chino under the auspices of the Southern California Poland China Breeders Association was very satisfactory. The price ranged from $50 to $100 on sows and from $25 up on gilts, the price being governed largely by whether they were bred or not. The association expects to hold a sale each year.

---

Navy Boy, the Poland China boar bred by Fred Gatewood of Fresno and owned jointly by Gatewood and Stevens, was made grand champion boar at the International. Navy Boy has never been beaten in class and was junior champion of the 1920 state fair and grand champion in 1921-22. If a California bred boar can win at Chicago, which is the center of the hog industry, then California breeders need not worry about having the right type of hog as Navy Boy has had, considerable competition every time shown here.

---

## LOS ANGELES STOCKYARDS

The Los Angeles Union Stockyards has reached the age of one month and is proving to be a rapidly growing and healthy youngster. During the month of November 11 selling agencies handled a total of 13,506 cattle, 2,810 calves, 5,820 hogs, 6,565 sheep and lambs.

The big end of the cattle came from Idaho, Wyoming, Montana, Utah and Colorado, with Texas, Arizona and California furnishing a substantial number. Inyo County had some top lambs and steers on the market. There is nothing unusual in the origin of the receipts from the north. That is where the bulk of the supply has come from at this season of the year for many years past, but this year the owners came to market, fraternizing with the business interests of Los Angeles.

The purchases were made largely by the 11 local packers and a scattering of small killers located within a radius of 15 miles of the yards. About 1,500 out of the total number of cattle went to feed lots as far north as San Luis Obispo and will eventually find their way back to the market. A large number of feeder hogs also went into the country for finish feeding and will likewise come back to the market. The small feeder is rapidly finding out that he can get a few or many of the kind he wants on the market. The offering of feeder lambs and the prices paid for fat lambs illustrated the opportunity for profitably feeding a few on every ranch, to say nothing of the value of the sheep in trimming up vegetation, cleaning out irrigation ditches and fertilizing the soil. The small producer is also finding out that he can get under competitive bidding at the market just as much as the bigger shipper, and that this is a growing market.

---

## MINNESOTA HOLSTEIN BREAKS WORLD RECORD

Another world's champion has been added to Minnesota's list of high producing Holstein cows. She is Mamsell Johanna owned by C. L. Spaulding of Warren. As a junior four year old she has just completed a 365 day semi-official test period with a record of 31,515.9 pounds milk containing 1,054-.03 pounds butterfat equivalent to 1,317.53 pounds butter. This excellent record has earned for Mr. Spaulding's cow the high honor of being the world's champion milk producer for her age. She also stands third in her class among the world's greatest butter producers. As she carried a calf for 221 days during her test period her performance is all the more remarkable and one of the greatest ever made by any cow.

---

## COTTAGE CHEESE EASY TO MAKE

Cottage cheese contains all of the proteins of milk and a little fat. It contains more protein than most meats and the cost is very slight. Each pound of cottage cheese contains about one-fifth of a pound of protein, most of which is digestible.

This food alone is delicious and palatable and it may be made more so by adding a little sweet or sour cream, salt, chopped onion, and pimentos. It may be used in sandwiches and salads, and served with fruits, jellies and nuts. As a meat substitute cottage cheese rolls make a pleasing dish.

Cottage cheese may be made easily by permitting the milk to sour naturally until it curdles or clabbers. Cut the curd into fine pieces with a knife and cook slowly over a slow fire, preferably at the back of the stove, until the curd contracts and wheys off. Remove the whey, wash with cold water to firm the curd and wash out some of the acid taste. Place in colander or hang in a cloth sack to drain. Many prefer to cook it very slightly, leaving some of the whey, adding butter or sour cream, salt and pepper, and eating while still warm and fresh.

From GRASS to DRY FEED

Now, the pasture field and range must give way
—to the stall and manger, the feed lot and self-feeder, the barnyard and fodder rack.

*Include*

DR. HESS STOCK TONIC
*in the ration*

You have often noticed stocking of the legs, roughness in the hair, highly colored urine—all on account of the change from grass to dry feed.

Not so where Dr. Hess Stock Tonic is fed. The Tonics, the Laxatives, the Diuretics, take care of all that. No worms; the Vermifuges settle them.

Then you are all set for heavy feeding, a good yield of flesh and milk throughout the winter.

Tell your dealer what stock you have. He has a package to suit. GUARANTEED.

*I spent 30 years in perfecting this Tonic.*

You Should Not Buy a Bull Unless:

You have seen his dam and know that she is the type you want his daughters to be.
Or you have seen a good picture of her with a close-up picture of her udder.
She is a big producer of milk with a high percentage of fat.
Our cows are the tops of all the big sales in the state for the past three years.
Practically all of them have high 7 day and yearly records. They hold 4 world's records.
Our herd bull is Aaggie De Kol Mead, whose five nearest dams average 1130.64 pounds of butter in a year testing over 4%.
You should have one of his sons out of a high record dam.
Call or write for our long-time, easy payment plan.

Lankershim, Cal. Fred Hartsook Ranch Visitors Always Welcome

It Runs in the Family—Do You Know

That the Highest Record Daughter of King Korndyke Pontiac 20th, with 1158.2 lbs. Butter and 27,481.3 lbs. Milk as a 3-year old, is a half sister to our Junior Herd Sire, King Korndyke Pontiac Mead, from a daughter of our Senior Sire, King Segis De Kol Mead, or practically the same cross we are now using as the main framework of our herd?

Can you think of a better strain from which to select your future herd leader than this proven nick within the wonderful Valley Mead strain?

### GOATS

**Goat**—Prize Saanen Buck $10.00. A. L. Swanson, R. 5, Box 147a, Watsonville, Calif.

### SHEEP

**Hampshire Sheep—Straloch Farm 2½ miles west of Davis, Calif., on Highway. C. Harold Hopkins, Woodlands, Calif.**

# Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit $1.00. In writing questions give full symptoms or particulars of injury of animal.

### Difficult Breathing

I have a large work horse that breathes hard. It sounds as though the air passages in his head or throat were partly stopped up. It is not heaves as I am familiar with that. He has a fistula under the jaw of long standing. Could that have anything to do with his trouble? Working seems to help him as he breathes almost naturally after working. He eats well, is in good condition, too fat and has colic occasionally.—Subscriber, Victorville.

Don't see how the fistula could affect the breathing. It may be caused by indigestion. Reduce the feed for a time and see what that will do. Give these powders to stop the colic: Four ounces powdered gentian, two ounces powdered nux vomica, four ounces bicarbonate of soda and enough corn meal to make one pound. Mix well. Give a tablespoon of it twice a day in the feed.

### PURE BRED ASSOCIATION MEETING

The December meeting of the Southern California Pure-bred Association was held at the Los Angeles Union Stockyards and the topic of the meeting was the help and extension of junior club work. In order that the members get some first hand information regarding the junior activities two of the members of the Chaffey judging team which represented California at Portland and Chicago were present and told how they happened to be on the team and the benefits which they derived from it. Professors Crandall and Hughes of the university were present and assisted the association in its endeavor to line up more closely behind this work. Farm advisers and high school teachers were there also and it was one of the largest and best meetings the association has ever held.

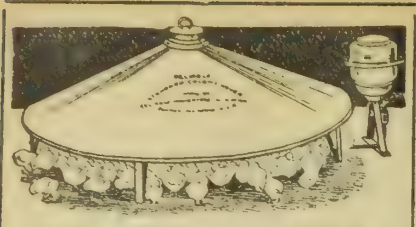
The workings of a central market as exemplified by the Union Stock yards were given in detail by such men as Manager McNaughton; John Knorpp, president of the Southwest State Bank which is located at the yards; and C. H. Hill the president of the Livestock Exchange. This meeting gave the breeders a chance to view the ultimate end of the swine, sheep and beef cattle which they are striving to better all the time, and put them in closer touch with the agencies which are working to provide a better price for the good stock than has heretofore been possible. Before the establishment of the yards cattle of all kinds sold for pretty nearly the same price and there was no incentive for Californians to breed and feed to produce the good animals. In the short time the yards have been in operation the premium for the right kind of cattle has been as high as four cents over the ordinary kind. Better bulls and better cows will produce the kind of stock which when fed properly tops the market and brings home the big check.

### HEREFORDS SELL WELL

"California Lincoln Lad," a Hereford steer exhibited by the University of California at the International Livestock Exposition in Chicago last week, won second prize in a great showing of 24 purebred Herefords from the leading breeders and agricultural colleges of the country. Last year the college won the grand championship on a heifer, "Lula Mayflower," but the strong show by the breeders this year wrested from the colleges the grand championship honors.

All Hereford classes at the International were large and the average quality of the animals shown was said by experts to be better than at any previous show. Large classes of strong individuals made up of the best Herefords from America's leading fairs caused many state fair champions from the fall fairs to drop well down the list of winners. The show was the meeting place of champions and won many friends for the Herefords, now generally recognized as America's leading breed of beef cattle.

The grand champion Hereford bull was "Panama 110th," exhibited by A. B. Cook of Townsend, Montana. "Lady Woodford," exhibited by J. N. Camden of Versailles, Kentucky, was grand champion Hereford cow. The grand champion load of feeder cattle, over all breeds, were Herefords exhibited by H. T. Graber of Kansas, Illinois. The reserve grand champion steer was also a Hereford exhibited by Colonel E. H. Taylor, Jr., of Frankfort, Kentucky. Andrew J. Mettler of Menno, South Dakota, won the sterling silver cup offered by the Institute of American Meat Packers for the best bred carload of Hereford cattle.



KEEP CHICKS WARM
with the New
Improved 1923 Model
Reliable Brooder

Uniform warmth for the chicks, means happy healthy chicks which mature quickly. The new model Reliable Brooder is the most satisfactory brooder you can use. Thousands are in use in Southern California and every owner is a booster.

NEW POULTRY BOOK
By GEO. H. LEE

Mr. Lee is author of a score of books on poultry, having a distribution of more than TWENTY MILLION copies. He considers as best of all, his latest book "POULTRY TROUBLES"

There are climatic troubles; seasonal troubles; neighborhood troubles; epidemic, accident, vermin, housing and feeding troubles—their PREVENTION and TREATMENT all told in the plain, easily understood, common-sense way for which Mr. Lee's writings are famous.

It's worth reading. A copy may be had FREE from any dealer handling Lee's Lice Killer and Germozone, or from FREE

GEO. H. LEE CO., Dept F-30 Omaha, Nebr.

# Poultry Queries

(Conducted by Jean A. Koethen)

### Weak Legs

If San Joaquin subscriber will stop feeding so much clabbered milk or cottage cheese to his turkeys they will not have weak legs. Give them once or twice a day just what they will eat at once. Keep it away from those that already have weak legs till their legs are well. I have had little chicks, turkeys and pheasants die from eating too much clabbered cheese. The last year I lost only two turkeys out of 75. I fed them clabbered cheese once a day, lots of onions, lettuce and alfalfa, mash and grain We fed more lettuce than any other green to our baby chicks and gave it t laying hens by the sack full, also clabbered milk in the morning with mash, and I got eggs when no one else did. I hope this will help some troubled ones.—Bertha Hemmerling, Anaheim.

### Mating Chickens

How many pullets can I mate to one cockerel? My 18 months old hens are with a rooster hatched in March. Are 15 too many for this mating?—Subscriber, Claremont.

Mate pullets to an old cock and two year old hens to cockerel rather than pullets to cockerel. Fifteen 18 months old hens is a large pen for so young a cockerel. Better make it 10 or 12, at least till later in the season. Fertility is stronger in February and March than in December and January.

### Hatching Eggs

How long should eggs be kept before incubating? Should they be turned every day? Can you tell me where I can get an Old Trusty incubator? I do not want t wait to get it from the factory—Subscriber, Claremont.

Eggs should never be kept longer than 10 days, and the regulations of the Sonoma County farm bureau hatchery project limit the time to seven days. The sooner you set eggs after hatching the more likely they are to hatch. Turn them every day. This may not be always necessary, but it is safe. Can some reader tell Claremont Subscriber where a second hand incubator of this make may be had?

### Price of Hens

Please tell me why colored hens bring a higher price than white. I am thinking of raising chickens for market and do not understand what makes the difference.—Subscriber, Delano.

It is a question not of color but of weight. Heavy hens bring a better price because they have more meat in proportion to the amount of bone than Leghorns. The meat is also of better quality. I think you will find that white Wyandottes and White Rocks bring just as good a price as R. I. Reds and Plymouth Rocks, though the latter are generally kept for table purposes. If you are going to raise market poultry you should keep one of the three American breeds — Reds, Rocks or Wyandottes.

### Cure for Blackhead

Please let me know a cure for blackhead in turkeys.—Subscriber, Upper Mattole.

I have received some reports of excellent results from the use of the olive oil treatment which was recently recommended by Mrs. Monroe of Burbank. Two tablespoons of olive oil are given the morning of the first day. The next morning, if the bird does not eat, give two or three pills of the following mixtures: one-third teaspoon each of red pepper and charcoal, one cup clabbered milk, a little chopped onion, thicken with toast or corn bread and mould into pills than can be easily swallowed. Feed this three or four times a day.

### Weak Legs

What is the trouble with turkeys when they lose control of their legs, seem weak and limp?—Subscriber, Upper Mattole.

Weak legs in turkeys are generally the result of a too fattening ration with too little exercise. Feed more oats, especially sprouted and rolled, and plenty of bran and greens. Please note Mrs. Hemmerling's reply to San Joaquin subscriber.

### Growing Mash

Will you kindly tell me whether the following growing mash is good or not, and how it can be improved: 10 per cent wheat bran, 5 per cent middlings, 5 per cent corn meal, 2 per cent ground oats, 60 per cent meat scraps with an addition of charcoal and bone meal?—Subscriber, Lankershim.

What you give here figures up to only 82 per cent. Is the other 18 per cent charcoal and bone meal? In any case 60 per cent meat scrap is far too much. It is better to figure a formula in pounds than by per cent, because measuring by bulk (i. e. quarts or gallons) and measuing by pounds bring entirely different results. Compare the above with the Cornell mash for growing chicks, which is 3 pounds bran, 3 pounds corn meal 3 pounds middlings, 3 pounds beef scrap; or with the following which was given me by an expert: 880 pounds bran, 140 pounds low grade flour, 200 pounds corn meal, 100 pounds each of ground milo, ground wheat and ground oat groats, 75 pounds meat scraps, 75 pounds ground green bone, 35 pounds charcoal, 10 pounds salt. Your easiest course, since you have bran, corn meal, middlings and ground oats, is to follow the Iowa experiment station formula: corn meal, 3 parts; middlings, 2 parts; bran, 1 part; ground oats, 1 part; beef scrap, 1 part; ground bone, ½ part. This is by measure, I think.

### Stunted Chicks

The heads of my young chickens become fiery red and they look as if they had been chopped off behind. They are thin, though they have plenty to eat and a good range. I have lost 60 per cent of them. They look twice as old as they really are.—Subscriber, Elsinore.

I do not know what can make their heads red, but that "chopped off behind" appearance and old look both belong to young stock that has been stunted in some way. Perhaps they were chilled when first hatched. Perhaps they have been worried by lice and fed on at night by mites. Possibly the breeding stock was weak or sickly. Maybe they have not had the right kind of feed. My advice is: First dust well for lice and make sure there are no mites in their houses; second, put them on a mash of coarsely ground feed meal with 10 per cent beef scrap added, with wheat and cracked corn or milo for grain, and fatten them up for fryers. Those that have that "chopped off" look will never be fit for anything else. Be sure they are not crowded at night. This is very hard on growing birds.

### Ipecac for Blackhead

Please tell me how to use ipecac as preventive and cure for blackhead.—Subscriber, Orland.

The ipepac treatment, as recommended by the Doctors Wegeforth of San Diego, consists in separating the sick birds from the flock and giving them 10 drops of fluid extract of ipecac three times a day for 3 days, then twice a day for 3 days and finally once a day for 3 days. As a preventive a teaspoon of powdered ipecac was given twice a week in the food for each unit of 20 turkeys.

### Beans for Hens

Are cooked beans good for laying hens?—Subscriber, Gridley.

Cooked beans are excellent in the ration because they contain a large amount of protein. If you find the birds do not eat them readily mash them in their soup and thicken with bran or with the laying mash.

### Chicken-pox

Some of my White Leghorn pullets have scabs on their combs and one eye becomes greatly inflamed and closes entirely. The trouble is confined to one eye. There is no sign of roup or any other common poultry disease or injury.—Subscriber, Fullerton.

Those scabs on the combs would seem to indicate chicken-pox, possibly in a mild form. Isolate all affected birds, wash out the sore eyes with boracic acid solution twice a day and anoint the scabs with carbolated vaseline. By prompt isolation you may keep the disease from spreading. I am unable to say why only one eye is affected.

## ATLANTIC COAST POULTRY PRODUCERS

To meet competition in New York and Eastern markets with eggs shipped from California and other Pacific states the Atlantic Coast Poultry Producers' Association (cooperative) has been formed.

Territory in which the new association will operate includes New England, New York, New Jersey, Delaware, Maryland, Virginia, Pennsylvania and Ohio. At present the association maintains offices and salesrooms at 14 Jay Street, New York. Branches will be established in other Eastern cities from time to time.

The first officers of the Atlantic Coast Producers are: President, James Whetsel, of Vineland, New Jersey; vice-president, Harry H. Ober, of Lakewood, New Jersey; secretary, Frank App, professor of farm management at the New Jersey state agricultural college; treasurer and general manager, Herman B. Walker. All the officers and directors, with the exception of Dr. App, are practical poultrymen.

## POULTRY PRODUCERS DIRECTORS

Directors selected for the Poultry Producers of Central California are:

Sonoma and Marin Counties district: John R. Denman, D. R. Walls, J. J. Bergsteds, H. W. Richardson, C. J. Sutton.

Alameda and Contra Costa Counties districts: Eric Ruus, Jr.

Santa Cruz district: Geo. W. Wood.

Santa Clara and San Mateo Counties district: E. R. Lam.

Sacramento Valley district: Joseph Broadley.

## FARM BUREAU EGG LAYING CONTEST AT SANTA CRUZ

The second month of the California Farm Bureau Egg Laying Contest at Santa Cruz closed with a production of 39 per cent for the 60 entries. This is equivalent to a monthly average of 39 eggs per 100 hens daily. The fowls ate 3 pounds of grain and 9 pounds of greens per 100 hens per day.

It is interesting to note that the states of Oregon, Washington and Missouri and Michigan are well represented in the present contest, and applications are now coming in from all parts of the country for entry in the 1923-24 contest.

### High Pens

L. A. Thornewill, Santa Cruz, 514⅓; Alex Stewart, Santa Cruz, 453⅓; V. H. Guthrie, Petaluma, 399; Belknap Leghorn Farm, San Jose, 383⅔; Leon J. Wolf, Monterey, 353⅓; B. C. ### High Pens for Month

L. A. Thornewill, 257; John L. Davidson, 242; Alex Stewart, 237⅓; B. C. Young & Company, Bellingham, Washington, 209; Belknap Leghorn Farm, San Jose, 207; Inwood Poultry Farm, Corvallis, Oregon, 199.

So long as the United States exports half of its cotton crop, one-fourth of its wheat and one-fourth of its pork products to Europe, the American farmer is vitally interested, not only in the agricultural policies of Europe, but also in other national policies that directly affect their exchange and their buying power of our products.—E. G. Montgomery, chief foodstuffs division, department of commerce.

# Poultrymen's Guide

The value of chickens and eggs produced in California (1919 census) was $34,727,935.00. There is poultry on 92,409 farms in the state—78.5 of all farms. January 1, 1920, poultry of all kinds on farms in California numbered 10,811,183, a gain of 4,723,916 since 1910, indicating the rapid and important development of the industry. At the present prices of eggs, hens and baby chicks and the big demand upon hatcheries for more stock it is wise to order early. The representative advertisers whose announcements appear below are recommended to prospective purchasers.

### LIVESTOCK

Weekly summary, Tuesday, December 19, 1922, furnished by Federal-State Live-

Cattle: There was a strong tone to market at last week's close, but part of the advance was lost Monday and Tuesday. Good "Christmas" steers reached 8.65 Friday. There were 96 horned Herefords from Visalia, California, averaging 1216 pounds, in the string. Two loads of 1150 pound Idaho bullocks brought 8.50 Saturday. Other good lots ranged from 7.85 to 8.25, two strings of northern steers going at those prices Monday. Common steers went at 5.75. Practically no Arizona or Mexican steers arrived.

Beef cows reached 6.25 Monday, averaging 1090 pounds. Good California heifers same price. Most of the beef cows ranged from 5.00 to 6.00, trashy Mexican canners 1.50. Bulls, 3.00 to 4.00.

Demands good for feeders at steady prices. Good, northern selling 6.00 to 6.75, others 5.50 to 6.00. Arizona yearlings at 5.00.

Calves: More life to calf market. Most of supplies from Arizona and New Mexico, selling 5.00 to 6.50. Choice light vealers, 7.50 or better.

Hogs: With light supplies, the hog market shows some improvement. Top on light hogs Tuesday 9.60, with 170 pound averages, 9.50. Killing pigs brought 9.25. Packing sows, 6.00 to 7.00.

Sheep: Receipts sheep and lambs light, nothing choice. Medium half fat Inyo lambs 11.25 Tuesday, averaged 92 pounds. Choice light lambs, 14.00.

Daily Livestock Market Summary, Tuesday, December 19:

Cattle: Beef steers steady. Monday, 400 medium to good Nevada steers, averaging 1131 pounds, brought 7.85; medium Colorado Tuesday, 7.25; common tailenders, Arizona, 5.75. Good feeders on hand but not sold up to late hour. Good cows brought 5.75 and medium 4.75. Load of Arizona yearling stockers sold at 5.00.

Calves: More action to calf market. Common to medium Arizona and New Mexico calves, averaging 240 to 300 pounds, sold from 5.50 to 6.50.

Hogs: Quick clearance on light supply hogs at steady prices. Four loads of good light hogs brought 9.60, with 169 pounders at 9.50 and 465 pound packing sows at 6.00.

Sheep and Lambs: Market steady. Band of 233 medium quality Inyo lambs sold at 11.25, averaged 92 pounds.

Quotations, based upon actual sales at the Los Angeles Union Stockyards, follow:

Cattle: Beef steers, good grade, 7.75@8.50; medium grade, 7.00@7.75; common, 5.50@7.00. Beef cows, good grade, 5.25@6.25; medium grade, 4.25@5.25; common, 3.50@4.25; canners and cutters, 1.50@3.25. Bologna and butcher bulls, 3.00@4.50. Feeder steers, 5.00@6.75.

Calves: 150 to 200 pounds, good and choice, 7.00@7.50; 200 to 250 pounds, 6.00@7.25; 250 to 300 pounds, 5.25@6.25; over 300 pounds, 5.00@6.00.

Hogs: 150 to 200 pounds, 8.25@9.60; 200 to 250 pounds, 9.00@9.50; 250 to 300 pounds, 8.25@9.00; over 300 pounds, 7.50@8.00; smooth sows, 7.00@7.50; rough sows, 6.00@7.00. Feeder pigs, 7.50@8.00.

Sheep and Lambs: (Full wooled) lambs, good and choice grades, 13.25@14.00; medium grade, 12.00@13.25; ewes, medium grade and good, 5.75@6.50; yearling wethers, medium and good, 8.50@9.50; aged wethers, 7.00@7.50.—Nelson R. Crow, local representative.

Supplementing the government market report the Cultivator will hereafter endeavor to secure and publish a report of the daily sales of carload lots at the Los Angeles Union Stockyards, giving number of animals, average weight, point of origin if possible, and price. These figures have to be obtained from the separate commission firms and a full report is not always obtainable. Sales since December 12 are:

Dec. 12: 25 good steers, 1050, 7.75; 12 calves, 160, 7.00.

Dec. 13: 13 steers, dehorned, good, 1060, 8.00; 27 cows, 820, common, 4.00; 9 cows, good, 1140, 5.40; 68 calves, 320, 6.25; 18 calves, 240, 7.50; 53 calves, 280, 5.50.

Dec. 14: 260 stocker calves, common, 292, 5.60.

Dec. 15: 53 good Colorado steers, 1035, 8.25; 110 good Wyoming steers, 1025, 8.00; 28 good steers, 1040, 8.00; 21 medium steers 890, 7.00; 138 common steers, 1050, 5.75@7.50; 24 Idaho cows, medium, 1060, 5.25; 11 Idaho cows, 845, 5.75; 152 good calves, 300, 6.75.

Dec. 16: 92 prime California steers, 1225, 8.65; 54 Idaho steers, good, 1030, 7.60; 15 calves, 200, 4.00; 642 wethers, 13.00.

Dec. 18: 68 good Nevada steers, 1115, 8.00; 410 good Nevada steers, 1125, 7.85; 58 good steers, 1030, 7.60; 49 feeders, 6.25@6.50; 30 cows, 1090, 5.75; 29 cows, 1070, 5.50; 33 good cows, 1160, 6.25; 41 medium cows, 1050, 5.40; 68 calves, 300, 6.50.

Persimmons: Lb., 10@12; poorer, 7@8.

Pomegranates: Lb., 6@8; few large, 9.

### CITRUS FRUIT

Grapefruit: Arizonas: 64-96 sizes, seedless, 4.75@5.00 per box. Imperial Valley, special brands, 5.50@6.00 per box. Northern, 3.00@3.75 per box.

Lemons: Special brands, fancy 7.50@8.50; choice, 6.00@7.00 box; market pack, 3.50

Oranges: Northerns: Special brands, Navels, 4.25@5.00 per box, market pack, 3.25@3.50 per box.

### BEANS

California Lima Bean Growers Association estimates regular Limas remaining in California by January 1, 1923, 420,000 bags, from which seed must be deducted.

Prices quoted Dec. 10:

| | |
|---|---|
| Limas | 8.50 |
| Baby Limas | 10.50 |

### HAY

**Following are prices in the general market to growers f. o. b. Los Angeles in carload lots; handling and commission must be added to obtain retail prices on new hay:**

A slightly weakened condition obtains because of increased receipts, but it is thought to be only temporary.

| | |
|---|---|
| Tame Oat | 22.00@24.00 |
| Barley Hay | 16.00@18.00 |
| Rabbit Alfalfa | 24.00@26.00 |
| No. 1 Dairy | 22.00@24.00 |
| Standard Alfalfa | 16.00@18.00 |
| Wheat Straw | 10.00@12.00 |
| Barley Straw | 9.00@11.00 |

Prices for alfalfa being received by growers on the ranch vary greatly. As approximate figures we may say that Rabbit Alfalfa is bringing the growers around 25.00@27.00 as a fair average. No. 1 dairy is varying from 15.00@18.00 with 16 as a mean or average price. Standard, 10.00@12.00.

### GRAIN

Prices L. A. Grain Exchange, December 19:

Milo, 100 ton lots, January del., 1.97¼. Barley, 100 ton lots, January del., 1.67¾.

Cal. Farm Bureau Marketing Exchange reports December 19:

Heavy market accumulations of barley have cleaned up. L. A. market is below Eastern. It is dangerous to ship wheat in here unless sold. Good seed wheat is bringing 2.25; good milling, 2.35.

Barley is stiffening up; arrivals very light last week. Selling 1.65@1.67½. Eastern higher.

Milo arrivals too liberal to bring up market, selling 2.00@2.10 according to quality.

Corn cheaper at L. A. than for shipment because of heavy arrivals. 1.73¾@1.76¼ for No. 2 bulk grain; for shipment prices would be nearer 1.80.

S. F. market prices for barley about 7½ below L. A.; all others about same level.

# San Francisco Markets

San Francisco, December 19, 1922.

### BUTTER

**Sales on Dairy Exchange:**

**Following quotations carry a jobber-to-jobber discount of 10 per cent, plus a seller's handling charge of 2 per cent of net invoice:**

### POULTRY

Sales to Retailers: Below are listed averages of actual prices obtained between 7:30 and 9 o'clock the morning of December 18, by San Francisco jobbers from their sales to retailer, hotels, restaurants, cafeterias, etc. Slight fluctuations may be noted during the day's trading.

Broilers: 1 to 1¼ lbs., 33@35 per lb.; 1½ to 1¾ lbs., 30@32 lb. Colored, 25@27 per lb.

Fryers: Leghorn, 2 lbs., 26@28 per lb. Colored, 2 to 3¼ lbs., 25@27 per lb.

Young Roosters: Colored 3½ lbs. and up, 25@27 per lb. Staggy, showing spurs, 21@23 per lb.

Old Roosters: Colored, 17@18 per lb. Leghorn: 14@15 per lb.

Leghorn Hens: 2½ to 3 lbs., 18@20 per lb.

Large Colored Hens: 26@28 per lb. Off stock 23@25 per lb.

Ducks: Young, 18@20 per lb. Off stock, 15@18 per lb.

Geese: Young, 20@25 per lb., according to quality.

Live Turkeys: 32@35 per lb.

Dressed Turkeys: Fancy, 38@40 per lb. Off stock, 25@35 lb.

Belgian Hare: Live, 15@18 per lb. Dressed, 18@23 per lb.

Jack Rabbits: 2@2.50 per doz.

Squabs: Live, fancy, 55@60 per lb. Common, 3.00@3.50 per doz.

Old Pigeons: 2.50@3 per doz.

Guinea Fowls: Young 8@10 per doz.

### LIVESTOCK

**In reviewing conditions governing the local livestock market during the past week the Federal-State Livestock Market News Service says:**

Cattle prices, per cwt. (delivered off cars from San Francisco)—Beef steers, good grades, 7.75@8; medium grade, 7@7.50; common grade, 6@6.75; beef cows, good grade, 5.75@6; medium grade, 5.25@5.50; common grade, 4@5; canners and cutters, 2@3.50; bologna bulls, 3.00@4.50.

Calves: 150 to 200 pounds, good and choice, 7.50@7.75; 200 to 250 pounds, 7.25@7.50; 250 to 300 pounds, good and choice, 6.75@7.25; over 300 pounds, 5.50@6.50.

Hogs: Good and choice, grain fed Californias, 150 to 200 pounds, 10@10.50; 200 to 250 pounds, 9.50@10; 250 to 300 pounds, 8.50@9.25; 300 pounds up, 7.50@8; smooth sows, 250 to 300 pounds, 6.50@7; rough sows, 250 to 300 pounds, 5.50@6; rough sows, over 300 pounds, 4.50@5.50.

Sheep and Lambs—Lambs, good and choice grades, 13.50@14; medium grades, 13@13.50; ewes, medium and good, 5.50@6.50; wethers, medium and good, 8.50@10.

### POTATOES AND ONIONS

Sales to Retailers: Averages of actual prices obtained December 18, between 7:30 prices obtained December 11, between 7:30 and 9 o'clock by San Francisco wholesalers from their sales to retailers, hotels, restaurants, cafeterias, etc. Terms: Cash on the walk. Slight fluctuations may be noted during the day's trading, while higher prices are sometimes obtained where credit is given or goods are delivered.

Potatoes: Wharf and track prices, Rivers, 80@1.00; Salinas, 1.65@1.85 cwt. Idaho Russets, 1.25@1.35 cwt. Washington Gems, 1.20@1.30 cwt. Jobbing: Rivers, 90@1.15.

Sweet Potatoes: Merced, 1¾@2 lb. Cellar, 2¼@2½ lb. Nancy Halls, 2 lb. Poor for less.

Onions: Green onions, 1.25@1.50 box. Stockton Browns and Yellows, 1.25@1.75 cwt. at wharf, white, 1.50@1.75 cwt.; jobbing prices, 25@35 higher. Garlic: 4@6.

### VEGETABLES

**Prices furnished by state department of agriculture, division of markets:**

**Sales to Retailers: Below are listed averages of actual prices obtained between 7:30 and 9 o'clock, December 18, by wholesalers from their sales to retailers, hotels, restaurants, cafeterias, etc. Terms: Cash on walk. Slight fluctuations may be noted during the day's trading, while higher prices are sometimes obtained where credit is given or goods are delivered.**

Artichokes: 22.00@24.00 per cr.

Beans: Kentucky Wonder and Wax, .2@18 per lb.; French, 18@20; Limas, 7@9 per lb.

Brussels Sprouts: No. 1, 7@7½ per lb.

Bunched Vegetables: Carrots, 50@60 per dozen; turnips, 55@60 per dozen; beets, 50@60 dozen; parsley, 30; radishes, 30 per dozen bunches.

Cabbage: 1@1¾ per lb.

Cauliflower: Doz., 1.00@1.25.

Celery: Local, 3.00@3.75 cr.; 15@25 per half doz. bunches.

Cucumbers: Southern 2.00@2.50 small box; 3.00@3.50 lug; English, 2.00@3.00 doz.

Eggplant: Southern, lb. 6@7.

Endive: Lb., 65.

Lettuce: Local, best, 1.25@1.75 cr.; Sacramento fy., 2.50; so., 2.50@2.75.

Mushrooms: Lb., 25@40.

Peas: Imp. Valley, 10@18 lb.

Peppers: Bells, Southern, 6@8; Chili, 8@9.

Rhubarb: So. 1.00@1.50 box.

Sacked Vegetables: Carrots, 1.00@1.25; turnips, 1.00@1.75; beets, 1.00@1.25; pumpkin and squash, 1.25@1.75 sk.; lb. 2.

Spinach: 6@8.

Squash: Summer, 1.25@1.75 L. A. lug; Italian, 1.25@1.50 box; Cream lug, 1.50.

Tomatoes: San Diego best, 1.25 cr.; 2.50@3.00 L. A. lug. Los Angeles, 1.75@2.50 per lug.

### FRESH FRUIT

Strawberries: 1.50@2.25 cr.

### CITRUS FRUIT

Grapefruit: Southern California, 2.00@3.00; Arizona, 4.00@5.00 box; Imp., 6.00@6.50.

Lemons: Special pack, 7.00@7.50 box. Choice, 6.00@7.25. Lemonettes, 2@4.00 box.

Oranges: Valencias, fancy, all sizes Navels, 3.50@4.50 box; Tangerines, 2.00 box; 3.50@4.00 lug.

### BEANS

Shipping prices for 100 pounds. Quotations from California Bean Growers' Association, C. R. C., 1922 beans:

Large whites, 6.25; small whites, 6.35; pinks, 6.40; Mexican reds, 5.70; red kidneys, 7.50; Henderson Bush, 10.00; cranberry, 7.75; bayos, 7.40; blackeye, 5.00.

### HAY AND FEEDSTUFF

Under date of December 16, A. W. Scott Co says:

Receipts past week 1101 as compared with 801 of previous week. General demand is not strong and prices of all grades show an easier tendency. Interior trading light. Weather and road conditions have hampered loading and interfered with country demands. Alfalfa quiet. Oversupply in Los Angeles market diverted heavy shipments to this city, depressing prices.

**We quote today wholesale prices in carload lots as appear from dealers' transfers upon the market in San Francisco (for prices to consumers, charges for switching, cartage, commission and handling expenses must be added according to conditions.) Transportation bad, scarcity and high prices for spot.**

# Citrus Markets

Los Angeles, December 20, 1922.

Navels here had strong competetion

with Floridas and island grown fruits. Poor fruit especially are having a hard time of it. There are no high prices for lemons but market is in better condition than is the orange market.

**Shipments**

Shipments of citrus fruit to date since November 1, 1922:

Southern California: Oranges 1109 cars; lemons, 528; total, 1637. To same date last season, oranges, 941; lemons, 670; total, 1611.

Central California: Oranges, 3,250; lemons, 62; total, 3,312. To same date last season, oranges, 3,647; lemons, 20; total, 3,667.

Northern California: Oranges, 256; lemons, 19; total, 275. To same date last season, oranges, 322; lemons, 3; total, 325.

## Snappy Notes on Livestock

**By A. L. Spellmeyer**

You folks in the country want a translation of the market report, not cow circle talk, so here goes for that first, and later you can have the rest of it, if you read further.

Every old condition we describe reaches you late. If there is a calf shortage reported, by the time you get the dope it's probably a calf oversuppy; if a beef oversupply is reported, by the time you get it the market is short, etc. The only fact that runs true to form is the continued low price for the light feeder steers that straggle in.

Calves have been a drug on the market lately, the ordinary Southwest large mixed kind going from 5.25 to 5.60 and small choice in little lots up to 7 or better. Too many have come in, prices binged all over the state and now they have quit coming. Fine big steers went to 8.65 last week, and this Monday, with all last week short, they are dragging under the 8 cent mark on Monday morning. Some fleshy feeders sold today at 6.25, some near beef dehorned and good for 6.50, some good fat cows 5.50 and some up around 6 cents. Light steers are not sure of anything over 4.75 to 5 cents unless they have quality, and that's cheaper than they can be bought for on any range and shipped in.

There are stocker and feeder buyers today who are not able to get their needs. I heard of a dandy bunch of Texas cows, almost purebred and going over 900 pounds, that only cost 3.70 delivered Imperial.

The reason beef slowed up is the Christmas season with the turkey and pudding demand instead of steak and roast beef, together with the fact that a lot of cattle are offered less f. o. b. range cheaper than at the stockyards and even regulars have not been able to resist taking them on, for exactly as prices bring stockyards shipments so does price outside make outside purchase if it saves the killer anything. 6 to 6.50 outside, shrunk, means often the equivalent of 7 delivered instead of the 8 recently prevalent, and 7.50 at most.

There is a report out that next year will be short on yearling steers, and this spring will show the earliest range contracting we have known for some time. Several parties are already figuring early spring steer contracts in the face of the present apparent low feeder and stocker prices.

The range supplies are harder to get now owing to winter tie-up. A thousand steers, very nice, that weighed 550 pounds in Los Angeles recently went on up the Coast. I priced a part and was asked $38 per head. I priced another lot of 300 light 700 pound Arizona cows a buyer put up towards Paso Robles and was given $35 as a low mark. In other words after the yearlings reached good California grass they are valued at 7 cents and the cows at five cents, instead of being five cents on the range or at the stockyards for light steers, and three cents on the range or stockyards for thin stocker cows of common breeding.

Some stocker calves of fine quality have been selling at 5 to 6 cents and weighing 300 to 350 pounds as heavy veal, meaning 15 to 20 for an animal that started with the kind of feed California has this year will in two years outweigh the ordinary yearling bought next spring at a probable $30 up price, at least 100 pounds, but these California men don't seem to realize this and, though their future depends on better prices than prevalent, expect these low prices to continue indefinitely from their lack of purchase.

The latest thing at the stockyards is the new $15,000 bond and the protected market sales bank account that is being required by the order from Washington, from all commission men handling consignments. This positively protects producer consignments and makes it safe to ship to any registered commission man operating on the yards, for it's all under government supervision.—A. L. Spellmeyer.

## CERTIFIED SEED POTATO GROWERS ASSOCIATION OF CALIFORNIA

A MEETING of the following individuals and representatives of companies engaged and interested in the growing of certified seed potatoes in the state was held at Sacramento on December 13. Among those present were E. D. McSweeny, El Monte; Carl Nielsen, Valley Ford; Wulff Ranch Company, Clarksburg; Opal W. Fry, Shafter; C. G. Patton, Riverside; A. T. Hooven, Arcata; W. A. Beer, Arcata; W. A. Caldwell, Camino; E. G. Swift, Calistoga; Pasadena City Farm, Bert C. Bougher, superintendent; W. V. Shear, potato specialist, state department of agriculture.

W. V. Shear of the state department of agriculture briefly outlined the growth and development of the certified seed potato industry of California since its beginning in 1915. He referred to the work of the former association of the certified seed potato growers which had practically ceased to function and suggested the formation of a new association or the revival of the old with extended activity.

E. G. Swift of Calistoga outlined a form of organization designed to market cooperatively the 1922 crop of certified seed potatoes. It was voted to continue the old organization with certain modifications due to a number of the growers having already marketed portions of their 1922 crop and entering into contracts for future delivery. The name of the association was changed to The Certified Seed Potato Growers' Association of California and the following officers elected: E. D. McSweeny of El Monte, president; Carl Nielsen of Valley Ford vice-president, and E. G. Swift of Calistoga, secretary-treasurer.

One of the actions taken by the association to extend the planting of certified seed potatoes was the adoption of a resolution instructing the secretary to communicate with all of the county farm agents of the state, offering to supply certified seed for demonstration plats of one-half to one acre of any or all of the different varieties of certified seed at a uniform price of $2 per hundred at point of delivery in each community, no limitation placed on number of demonstration plats in any one county, all however, being under supervision of the county farm agent in order that The Certified Seed Potato Growers' Association might receive reliable and tabulated data from which deduction can be accurately drawn as to the comparative value of certified seed in comparison with uncertified seed grown under similar conditions.

Probably one of the greatest achievements of the convention was the passing of a resolution that, beginning with 1923 crop planting, no potatoes planted shall be subject to certification that have not been grown from certified seed. Should any grower desire to develop any variety not now certified, he must first make known his intention by communicating with the potato specialist of the state department of agriculture and obtain his approval of the seed that is to be planted. Likewise any person desiring to introduce from other states new seed of the varieties now being certified in this state must obtain the same approval in order to have his stock certified.

Another great forward step was the adoption of the following resolution:

"Beginning with the 1923 crop, whether one or two crops are grown in one year, from that crop must be selected from the hills that are truest to the type of each variety a quantity of seed sufficient to plant an acreage equal to one-tenth of the total acreage which that person contemplates planting for his next crop of that variety. Thus in 1924 any person desiring to have his crop certified must plant it from seed grown from certified fields which have been grown from hill-selected seed that has been certified.

Anyone desiring further information relative to the association's work for the coming year may address E. G. Swift, Secretary-Treasurer, Calistoga.

## A GREAT WINNING RECORD

WE believe one of the most remarkable performances by breeders of poultry was that of the California White Leghorn Breeding Farms of Lankershim in the Oakland show of 1922. The White Leghorn is California's long time favorite, and it is said that it was the most hotly contested of any class at the Oakland show. And yet the Lankershim institution won 1, 2, 3, 5, 6, 7 and 8 on cock; 1, 2, 3, 4, 5, 6, 7, 8, 9 and 10 on hen; 1, 2, 4, 5, 7, and 8 on cockerel; 1, 2, 6, 7 and 8 on pullet; 1, 2, 3, 4 and 5 on old pen and 1 on young pen. In addition there were winnings of sweepstakes on female, all varieties competing, on first hen; sweepstakes, male, all varieties competing, on first cock bird; also every one of the six specials offered by the National S. C. W. Leghorn Club.

Speaking of the work of the California White Leghorn Breeding Farms the Pacific Poultrycraft says:

"We find they have already sold 9,000 ready-to-lay pullets this fall and their books show orders for 2,000 more to be delivered in the next 30 days. This is in addition to the thousands of hens sold for breeding purposes.

"Farther on down we came upon five yards of 600 hens recently purchased from L. G. Wiley, of Van Nuys that won the $500 prize offered by Holly Hatchery in the flock laying contest which opened October 1, 1920 and closed September 30, 1921. These hens averaged 217 each for the entire year and now, going on their third year will without doubt make excellent breeders, giving a high fertility of eggs with plenty of stamina in the youngsters. They are mated to Tancred cockerels of 300 egg lineage or better, Hanson cockerels of the same high records and a few to Morton cockerels of 275 egg lineage or better. You simply cannot go wrong in buying hatching eggs or chicks from such wonderful matings as these and the absolute guarantee of satisfaction that is backed by a $200,000 organization is proof enough you will receive every dollar's worth of value.

"We saw yard after yard of wonderful native hens in addition to these, 1,600 in number, that will be used in breeding operations this season. They are the result of rigid culling from an original flock of 10,000 birds and are mated in different yards to Hillview, Pennsylvania Farms, Tom Barron, Hollywood, Tancred and Hanson cockerels, all of the very best egg producing lines obtainable. It would be impossible for the average poultryman to assemble in one flock the great number of the world's highest egg laying strains and breed them separately, for not only does the investment reach staggering figures but the outlay of housing yards and other equipment runs into thousands of dollars. California and Southwestern poultrymen are now offered the best obtainable from any of his favorite strains at live and let live prices and within easy shipping distance."

The farms are now owned by Messrs. Eckman and Summers of Lankershim, they having succeeded E. E. Emerson and Rancho del Martino. They have associated with them, as all around poultry expert, J. T. Milligan, formerly of Louisville, Kentucky. Mr. Milligan began his study of poultry and its problems in 1900 and successfully exhibited at many of the world's greatest poultry shows. In 1907 he purchased a farm at Stithton, Kentucky, and devoted all his time for the following ten years to his now famous flock which he bred under the name, Oak Grove Poultry Farm. During these years he accumulated thousands of ribbons and loving cups. In 1918 he went to the Kentucky state agricultural station at Lexington and was placed in charge of the egg laying contest. Past experience made it possible for him to so care for and feed the birds in competition that "Lady Walnut Hill," a S. C. White Leghorn pullet laid 94 eggs in 94 days without a miss, establishing a world's record for continuous production. Under his contract with Messrs. Eckman and Summers he will raise youngsters from exhibition matings during 1923. He will brood 7,000 chicks during January and February, a similar amount during March and April, and again in May and June he takes over another 7,000. Without doubt this man will be the means of raising the greatest amount of high class White Leghorns for the above concern ever in the history of California during one season.

## GYPSUM FOR POTATOES

Up in the San Fernando Valley, Los Angeles County, several potato growers have used gypsum during the past year with apparently excellent results. These results have been as varying as the amount applied per acre. Some claim an increased yield, some a smoother potato skin, others a small benefit in several ways. That some soils benefit by an application of gypsum is beyond question. These benefits have been reported to the county farm adviser, and L. C. Holmes, soil expert and truck crop specialist, has applied gypsum to ten trial plots in amounts ranging from 1,400 pounds to 3,000 pounds per acre. Another year we shall come a little nearer knowing in just what way and to just what degree crops are benefited by gypsum and what amounts are best to apply. But one year will not tell the whole story, and Mr. Holmes hopes to maintain these plots for a number of years, applying the same amounts each year. At the end of the third year some definite knowledge will have been obtained upon which growers may base their applications with an assurance of certain results.

## SWAPPING ALKALIES

Every possessor of alkaline soils knows that a relatively small amount of black alkali, or carbonate of soda, is highly injurious to all crops. Nearly as many know that white alkali, or sulphate of soda, is far less injurious to any crop and that some crops are tolerant of large amounts of alkali salts if no carbonate is present. It is hard to estimate the effect upon crops of these salts for black alkali is never present without one or more salts being there in quantity sufficient to affect the crop; and a chemical analysis is necessary to determine the exact amounts there are in the combination one has to combat. But none of the others nor all of them constitute such a menace to agriculture as black alkali. Faced by this foe, the farmer has remedy for reducing the amount, and that is the application of gypsum or "land plaster." This changes carbonate or "black" to sulphate or "white." This is a permanent change, for it does not change back again. The greatest practical benefit that comes from this change lies in the fact that the sulphate is the more soluble form and is therefore easily taken up in the water and washed away, and this is the only way in which soils may be rid of alkali.

**WEATHER REPORT**

San Francisco, December 16, 1922.

| Stations | Rainfall—Week | Rainfall—Season | Norm. | Temp.—Max. | Temp.—Min. |

# The California White Leghorn Breeding Farms

## Lankershim, California

## Successors to E. E. Emerson and the Rancho Del Martino White Leghorns

# Sweep Oakland Show

The Oakland Show of 1922 has the "Hottest Class" of White Leghorns ever seen on the Coast, The Panama Pacific International Exposition not excepted.

A Clean Sweep is Made by The California White Leghorn Breeding Farm of Lankershim, California.

Our Winnings follow:

| | | | |
|---|---|---|---|
| **COCK BIRDS** | **1-2-3-5-6-7-8** | **PULLETS** | **1-2-6-7-8** |
| **COCKERELS** | **1-2-4-5-7-8** | **OLD PEN** | **1-2-3-4-5** |
| **HENS** | **1-2-3-4-5-6-7-8-9-10** | **YOUNG PEN** | **1** |

**Sweepstake Female, all varieties competing on 1st Hen**
**Sweepstake Male, all varieties competing on 1st Cock Bird**
**Everyone of the SIX SPECIALS offered by the National Single Comb White Leghorn Club**

We are in position to furnish hatching eggs and baby chicks from either of the above strains which are housed and bred separately, matings having been made up on November 1st.

Other than these we have thousands of extraordinary heavy laying breeding hens mated separately to males from the admitted heaviest egg laying strains of Single Comb White Leghorns on earth; namely, Tancred, Hollywood Farms of Washington, Hanson of Oregon, Ferris of Michigan, Hillview Farms of Illinois, Pennsylvania Farms of Pennsylvania, and Tom Barron of England.

Our plans are laid to develop 30,000 pullets from these strains during 1923. If you don't care to bother with baby chicks, now is the time to make arrangements for 3, 4, 5 and 6 months old pullets to be delivered to you on the date most suitable to your needs. These pullets will be developed on free range in orchard and in corn fields and will come to you in PRIME condition for they are **bred right, hatched right, brooded right,** raised in the best of environment like wild fowl for health and stamina, and will go into the laying house prepared to give a splendid account of themselves as commercial egg producers.

### GUARANTEED 100% FERTILITY ON ALL HATCHING EGGS

We guarantee 100% fertility on hatching eggs by replacing all those found to be infertile. Two plans for replacement being given—"A" and "B."

Under plan "A" when you buy hatching eggs, for instance 100 eggs, and our incubators at that time are showing an average of 90 percent fertile we ship 100 eggs plus 11 extra eggs as a replacement on the 10 percent that should be infertile. Thus you purchase 100 eggs and we ship you 111 eggs so they may all be incubated at the same time in your machine.

Plan "B," we ship the number of hatching eggs ordered. At the end of seven days the eggs will be tested and all found to be infertile will be returned to us for replacement, by return mail or express or such other time as you may designate.

You don't have to leave home to get the best in the world either in high powered egg stuff or standard bred birds. We already have done that job for you and you can get them at prices that you can afford to pay whether you be breeder or commercial poultry man because our birds will pay interest to you on the cash you invest in them.

We have paid staggering prices for some of our breeders. We did this because as a large breeding farm we felt that these breeders would earn interest for us which they are now doing. That's why the California White Leghorn Breeding Farms were established, so that California breeders and commercial poultrymen don't have to go beyond the confines of their home State for the best there is in Leghorns. The builders of this mammoth breeding farm realized that California has twelve growing months in which to produce the world's premier White Leghorns.

We believe it just as reasonable to import from Northern and Eastern States breeding leghorns as it would be to ask those states to furnish us in oranges or other citrus fruit. The reason other states buy citrus fruit from California is because we have 12 growing months in which to produce it. For the same reason White Leghorn breeders from other states are buying their stock from our farms because they know that we have 12 growing months in which to produce it. Realizing that you can produce better stuff with 12 growing months than you can in six or eight months.

We are in the same comparative position as a manufacturing concern whose first cost for production is so high that the consumer could not afford to buy if production costs were not lower.

Our original investment in high quality blood lines and high standard breeding stock of National and International reputation is the machinery of our plant from which production in **quantity is gained** and **quality reproduced** at **prices you can afford to pay.**

### HATCHING EGGS

**Fifteen for $2.00—In lots of 100, 12c each—In 500 lots, 11c each—in 1000 lots, 10c each.**

### BABY CHICKS

**In lots of 100, 25c each—In lots of 500, 24c each, in lots of 100 or over, 23c each.**

**We always have Three, Four, Five and Six Months old Pullets from Pedigreed Trapnested Stock.**

You are cordially invited to come and see the stock from which your hatching eggs or baby chicks will be produced—also the pullets we are now offering. Or you may order from this advertisement by mailing remittances for 10 percent of your purchase.

## More Rural Homes Electrized in California Than in Any Other State

Hydro-electric plants in California, supplemented by a few steam plants which are maintained for standby purposes, now have a total capacity of 1,504,000 horsepower. During the 12 months ending September 1, 1922, these plants generated 4,457,782,941 kilowatt hours. Beside there are hundreds of homes fitted with small plants of possibly one kwh capacity. California is an electrical state.

Mr. Peters of the Edison Company says: "California is now the tenth state in manufactures, the principal centers being San Francisco and Los Angeles. Between 1919 and 1921 the values of manufactured products in Los Angeles increased from $653,000,000 to $911,000,000. Figures of building permits, bank clearings, exports, population, schools, telephones or any other index of conditions will all show increases proportionate to the above. To keep ahead of all this demand and have an adequate supply of power available when needed is the obligation of the public utilities. So far they have not failed and their well laid out program for future growth is reassuring to the manufacturer desiring to establish himself on the Coast. At a time when the eastern man does not know where his next's day's coal will come from, there is great comfort in the thought that in California power is generated from the great white coal and as long as the sun shines and the snows fall there will be power enough to go around."

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will be pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertisers.

## EDITORIALETTES

That thunder bolt descending through the night, and which was photographed by the Cultivator artist, has less of menace than appears in the illustration for it is to be captured and used for the benefit and the comfort of California farmers. In fact, it is being captured every moment. Its destructive power has been destroyed, and it has been harnessed to the irrigator's pump, the feed cutter, grain grinder, the saw, separator, churn and even the light running sewing machine which hums musically at the lightest touch of the electric button. More than all, the lighting system which makes for efficiency by night as well as by day. Pressing the button beats kicking the lantern.

* * *

The electrical age is here. It is being taken advantage of by the farmer as well as by managers of railways and largest factories. The farmer welcomes it or dreads it according to whether he has capital to equip his place for most efficient production. It is perhaps unfortunate that greater capitalization is necessary. It is, however, true of farming as well as banking, merchandising or manufacturing. Fortunately modern bankers are considering the need of agriculture and the financing of farming is somewhat better cared for than formerly. The greatest step has been the establishment of the federal farm loan system. Its limitation of $10,000 seriously limits its usefulness but bills are already introduced which will extend the maximum to $25,000. These bills are being opposed by short sighted money loaners who would retain the power secured through the control of capital and limit food production.

* * *

One of the arguments of those who are opposing the extension of the amount of the loan to be made is: "Why enact class legislation, or why pass a bill which favors the farmer and discriminates against the merchant or manufacturer?" To this we can only reply that it is not favoritism for it still lacks in giving to the agricultural interests as favorable conditions as have always been enjoyed by large commercial interests. Financing of the farmer has largely been left to mortgage concerns which have at times made loans under conditions which compel failure rather than encourage larger production. The federal farm loan has made an honest effort to reverse these conditions. It was good as far as it went. Now give us something better.

* * *

Everybody has a door bell. Many of these are connected with electric batteries which serve admirably providing they are renewed before exhausted. Electric batteries are higher priced than "before the war" so many a home owner has connected his door bell with the regular wiring of the house, using a tiny transformer in order to make the current suit the electric bell or buzzer. These transformers cost little more than the batteries and once installed never call for renewal. This hint is given merely to suggest one more advantage of electricity on the farm.

* * *

The above suggestion as to one additional use for electrical current may be considered as of infinitely small importance in the matter of total consumption of hydro-electric energy developed in our mountains. Possibly, but when the city of Los Angeles announces that during the last 365 days there has been completed in that city a new home every 14 minutes, it may be seen that it is going to take considerable hydro-electric energy to open all the doors in all the homes of California.

* * *

Sam Greene of the California Dairy Council is boosting dairymen into line to boost all of California representatives and senators into line to work and vote for the Voigt bill. The Voigt bill is an effort to induce the big manufacturers to refrain from "filling" skim milk with vegetable fats and putting upon the market a skimmilk coconut oil combination which "contains as much fat as, or even more than, the product of the dairy." Greene is wiring Washington: "California Dairy Council, comprised of every branch of dairy industry, with total annual value of production approximating $100,000,000, keenly feels need of protection which Voigt bill will provide. Earnestly urge you to exert every effort and authority your position to have bill reported by sub-committee immediately for final consideration by entire committee and reported to senate as expeditiously as possible."

Even the children on the Pullmans had their Christmas tree. The Southern Pacific supplied each train carrying observation cars with Christmas trees and each diner had packages for every child away from home and on board train on Christmas day.

* * *

'Twas a wonderful Christmas. The rain worth millions covered all the land earlier in the month. The sunshine for more than a week preceding Christmas put everybody in the best frame of mind for its complete enjoyment, and Christmas day was a wonderful day even for California. The Los Angeles Times becomes sentimental and gives the following "toast" for breakfast: "Here's to the highest mountains that ever grew outdoors and here's to the widest ocean to wash the fertile shores. 'Tis a land of wondrous visions, majestic to behold—with its face aglow with sunshine and its veins afire with gold."

## CALIFORNIA LEADS

In acreage under irrigation California has led all the states in the Union. This was true when the Hopi Indians first brought the waters of the streams onto the rich mesas, and has been true in increasing ratio since. In 1890 there were barely more than a million acres under irrigation in California. The nearest competitor was Colorado with nearly 900,000 acres. In the census of 1910, however, Colorado insisted that she had gained a slight lead over California. The wonderful development between 1910 and 1920 was sufficient to put California in a safe lead for all time to come. The census of 1920 shows California's total acreage under irrigation to be 4,219,000, while Colorado has nearly a million acres less, or a total acreage of 3,348,000.

Prof. Adams of the University of California estimates that there is needed at this moment $12,000,000 to carry out construction plans of irrigation districts and others and that there will be needed during the next five years $23,000,000 more. In addition there will be needed by new irrigation districts, plans for which are in the making or organization and promotion actually under way, $78,000,000. Besides the above other plans call for development which will reach the enormous valuation during the next five years of $174,000,000. It is also roughly estimated that this state will spend in the next ten years $350,000,000, and during the same time that the entire West will spend over half a billion. The expenditure of such vast sums is most gratifying to every Californian because of the fact that it indicates wonderful development and growth of opportunity.

Much of this increase is made possible by the development of hydro-electric energy in which California is again the long leader. Because of hydro-electric power making possible economical pumping, irrigation has increased in this state. This is shown by the fact that irrigation by gravity in the decade between 1910 and 1920 increased from 2,354,970 acres to 2,596,207 acres, while irrigation by pumping in the same period increased from 309,134 acres to 1,470,000 acres. While this increase was not all because of electrical pumping the greater portion was.

The power needs of this state can be met by fullest development of the potential hydro-electric power. The installations already made are sufficient for present needs, but there is development of other resources possible which will increase present supply by millions of horsepower. The need is for people to awake to the possibilities of hydro-electric development.

It has been estimated that industrial plants of the West (11 coast and western states) need at this moment according to figures secured by the Journal of Electricity and Western Industry; Mining, 983,672 horsepower; lumber, 703,387 horsepower; metal, 345,070; sugar, 238,385; food manufacture, 287,654; oil and gas, 202,925; flour 176,203; canning, 175,245; chemical, 142,263; pumping, 125,943; textiles, 252,083 horsepower. Food production, manufacture, refrigeration, etc., is now utilizing almost one million horsepower in these 11 western states.

Of this California uses almost as much as the other ten states.

For Quicker Better Spraying
Big capacity means better spraying at less cost. You cover your orchard in quicker time and you get the material onto the trees when it does the most good.
There's a new light-weight big-capacity Bean this year at a new low price: the Bean Triplex Senior. The 6 H. P. Bean Engine and Bean Triplex Senior Pump deliver 15 gals of liquid a minute at 300 lbs. pressure. This outfit covers surprising acreage a day, and does thoro work as it goes. Besides this new outfit, we offer a complete line of Hand and Power Sprayers. Factories east and west, and representatives in all fruit growing sections, insure good service to Bean owners everywhere. Mail coupon.

# By Jove

## By Richard E. Smith

SCARCELY a day passes in our rapidly moving world but that a practical use is found for something that years ago was known only in myth and legend. Our grandfathers never associated electricity and cows except possibly in the superstition that a thunder storm soured milk. Now, the two have a practical association.

"By Jove," the phrase which heads this story, is not used as a denatured cuss word but is intended to refer to the innumerable tasks performed by Jove, the legendary personfication of electricity.

For some unknown reason our friends who are fortunate enough to live in the country have failed to appreciate the amount of work that electricity can do on the farm and also the suprisingly low cost for this service.

To enable the reader to visualize this situation we will devote a few minutes to a comparison between an automobile and electric service. If our farmers were as familiar with electricity and its application as they are with the automobile, there would be very few country homes without complete electric service.

For instance a farmer will invest—does invest—on an average say around $1300 in an automobile and perhaps a trailer and at the end of a year's satisfactory use of that automobile can definitely figure out in dollars and cents wherein the automobile with the aid of a trailer has saved weeks of time, has made possible marketing of perishable crops in a condition which has made them profitable, has expedited the business side of the farm and made profit out of possible loss. Still more, it has made possible comforts and educational advantages. In dollars and cents the auto proves a long winner.

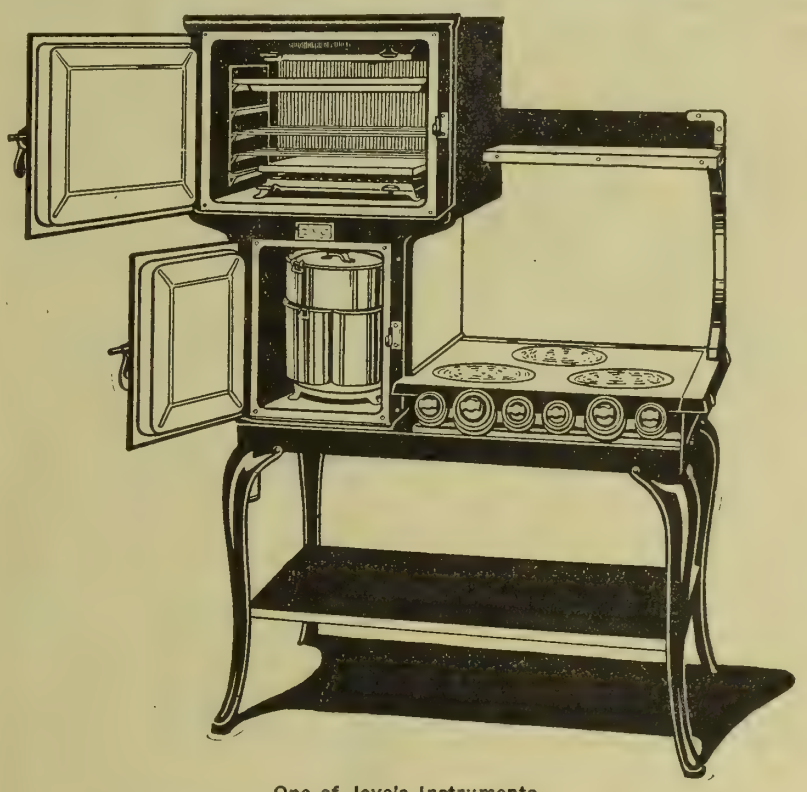
Then there is the piano. The investment of $500 or possibly $800, is not made with the idea that it is a part of the week's expense. It is an investment which adds much of comfort and edification to the home and gives opportunity for the educational advancement of the children.

Then there is the radio, the telephone and other modern day home equipment. None of these are necessary to existence but all are worth considering as a profitable investment. May not electrical equipment be equally important.

Electrical enjoyment, like charity, begins at home, and this is possible on nearly all of the farms in California where electric lines are within easy reach and the cost of service, because of the application of our water power, is reasonable.

Imagine a rural home in which the following exists: Adequate lighting in every portion of the house, abundant hot water at the turn of a switch, an electric range doing all the cooking without match, flame, odor or soot, a washing machine doing all of the laundry work, an ironing machine which handles sheets and handkerchiefs with equal dexterity, a vacuum cleaner, on the dining room table an electric percolator, toaster and waffle iron, a standard electric iron for odd jobs, a utility motor for polishing silver, grinding knives and running the sewing machine, a warming pad to displace the hot water bottle, a generous floor lamp for the living room and dainty table lamps in both mother's and daughter's rooms and a curling iron which probably will spend its time in daughter's room. Did I hear someone say, "By Jove!"

In case the master of the house feels that he has been slighted we hasten to add that when we step outdoors we will find electric lights wherever needed, including the yard, garage, shop, dairy, chicken house and hog pen. We also find a "utility circuit" run about the place with convenient connections for the two horsepower motor which will operate the pump for the pressure system, the grindstone, the feed cutter, the drill press, the wood saw and any other similar machinery. As the master of the house visualizes this, do I hear him whisper, "By Jove!"



**One of Jove's Instruments**

The electric range is the agency which will represent Jove in the modern home.

By this time the average reader may lose all interest in our story for he will say, "This is not for me."

We have not yet spent the price of an automobile, in fact, we have $200 over, which may be used for three or four things. If this family makes its living from a dairy we can add a motor for the separator and a water heater in the dairy which will furnish scalding water at all times for cleaning cans and the like.

If it so happens that this family raises chickens, we can include an electric incubator or if they already have an incubator we can give them an electric brooder. With these additional items there still remains a few dollars to be spent.

Jove is now emerging from the legendary state to become a partner in our daily life.

Having assumed that this family has invested the price of an automobile in the equipment we suggest, let us see what can be done by Jove.

Starting on Monday morning we find Jove engaged simultaneously at several duties. During the night he has kept the water hot in both the kitchen and the dairy. While breakfast is cooking in the electric range Jove is running the separator in the dairy and the curling iron in daughter's room. We speak of breakfast being cooked in the range, and this no doubt will be used in the country where larger meals are prepared than in town. Remembering what we have in our dining room, it will be easy to prepare coffee and toast or coffee and waffles right on the table, and if we invest the few dollars we had left over in a grill, we can also cook bacon, eggs, sausages, rice cakes and many other breakfast dishes right at the table.

After breakfast Jove will run the pump, the grindstone and feed cutter, wood saw or drill press, depending on what has been laid out for the day's work.

As this is wash day it will not be long before Jove is running the washing machine while the lady of the house is washing dishes. We did not make particular mention of an electric dish washer, but it could be readily included in our list, in which case Jove will attend to both the washing machine and the dish washer while mother gets out the vacuum cleaner and runs over the rugs.

If it is a bright day the clothes will be ready to run through the ironer within a few hours. This is a simple process which requires no more skill than fitting a sheet of paper into a typewriter.

While all this is going on dinner will be cooking in the electric range which is automatic.

Do I hear someone say, "By Jove!"

There is an old jingle which sets aside the duties of each day, but Jove has upset all this. We have already saved Tuesday by doing the ironing on Monday, and Wednesday, which was cleaning day, has disappeared because a few minutes with the vacuum cleaner each day keeps the house immaculate. There is no dusting to be done because there is nothing to make dust. There is no grease, soot or grime to be washed from woodwork because there is nothing to put them there. Draperies need not be washed with such frequency and windows keep remarkably clean. Baking day is gone because in our automatic range it is a side line as simple as hash.

The automatic range is the biggest feature in our labor saving program. Listen to this: for Sunday dinner we have planned a roast and three vegetables. Right after breakfast we prepare the roast and put it in the oven. We then get the vegetables ready and put them in compact containers which fit into the lower oven. Then we set the alarm clock on the stove for 3 o'clock and also set the indicating thermometers on each oven.

All we have to do now is to get into our $1300 auto and go out. We may be 50 miles away but at 3 o'clock the current will be turned on. In 20 to 25 minutes the lower oven will be hot enough and the switch will kick out. A few minutes more and the large oven will be hot enough to handle the roast and that switch kicks out. When we get back at 6 o'clock dad puts the car away while mother and daughter open the range and put the dinner on the table. I cannot imagine you reading this paragraph without saying, "By Jove!"

The best part of all this is that this money need not all be spent at one time, but on account of the expense necessary for the power company to connect the lines it will be found that they cannot afford to make the extension simply to supply lights. If an electric range is installed the power company will be in a much more favorable position to make the connection and then other equipment may be added whenever possible.

## DETERMINING FOOD IN SOIL

**By R. R. Snowden**

Keeping pace with the advance made in soil analysis, I wish to suggest that as we hear so much about the impossibility of determining the amount of available plant foods in the soil the following information might be interesting to your readers.

The official agricultural chemists of the United States in convention assembled made free use of the term "active potash" of the soil and they find: "that not only is the potash removed by crops in pot experiments directly related to the active potash originally in the soil but that the decrease of active potash in the soil is also directly related to the potash removed by crops." They determine this potash by solution in a weak nitric acid. This settles the question so far as they are concerned as to the practicability of determining the available potash in the soil.

As regards available nitrogen, a proof that the soil nitrogen is not available early in the season, the early application of nitrate of soda to a soil containing 5½ to 7 tons of nitrogen in an acre in two feet depth which is an enormous amount, increased the yield of beets 6½ tons per acre.

# Agricultural News Notes of the Pacific Coast

## Northern California

Colusa County supervisors have donated $500 toward the highway tree planting fund.

Ellis Lake is being dredged by the city of Marysville in preparation for making it part of a park site.

Glenn County turkey raisers were "paid" by one Thanksgiving turkey buyer by worthless checks amounting to $1600.

Permit has been asked to construct a $6,500,000 concrete bridge across San Francisco Bay to connect San Mateo and Alameda Counties.

The Colusa Sun calls attention to shipment of eggs now being made into the county from San Francisco to suggest that the movement be reversed.

Turkey raisers of Sutter, Yuba, Butte, Colusa, Glenn and Placer Counties will meet at Marysville early in January to perfect a marketing organization.

About 30 carloads of paddy rice of the new crop has already been shipped from Marysville. Before-the-rain rice brought an average of $2.50 per hundred; later rice $2.35.

Colusa chamber of commerce is discussing proposition of Hanford chamber of commerce that the next legislature be asked to make auto license fees collectable by county instead of state.

G. P. Rixford of the United States department of agriculture recommends to Sutter County rice growers planting of wild rice to protect their commercial crop. He says that ducks and geese prefer the wild rice.

Geo. W. Harney, horticultural commissioner of Yuba County, is busy organizing the Northern California Turkey Growers Association. A meeting will be held early in January at Marysville. Action is being taken.

The Glenn County Fair Association has organized, electing as its new directorate: L. E. Brownell, president; Allen T. Moore, vice-president; E. A. Kirk, secretary, and E. M. King, treasurer. E. A. Kirk will be secretary-treasurer.

Livermore Valley chamber of commerce has been conferring with Alameda supervisors over road improvements needed in the eastern end of the county. Paving of Livermore-Pleasanton and Cresta Blanca roads was specifically discussed.

Sutter County supervisors are having plans prepared for a 2,000 foot concrete causeway to connect the steel bridge at Nicolaus with the west levee of the Feather River spanning the low land opened to the flow of the river as a precaution against choking of the stream during freshets.

After making provision for protection of water users outside the district the railroad commission has issued a permit for the Palermo Land and Water Company and the South Feather Land and Water Company to sell their systems to the Oroville-Wyandotte irrigation district of Butte County.

It requires approximately 18 days to ship fruit from San Francisco to New York by Panama Canal, and European and Eastern ship building concerns have already been canvassing the country with the intention of forming a company to build several refrigerator ships to handle eastern shipments.

## Central California

A cannery is to be built at Riverbank, Stanislaus County.

The farm bureau lime-sulphur plant at Lindsay is expected to be ready for operation by the first of the year.

Residents of Smyrna Park, Ceres, have applied to directors of the Turlock irrigation district for light and power.

The Fresno County farm bureau has opened its annual membership drive. Meetings will be held throughout the county.

Clavicle, Tulare County, reports unusually extensive plantings of grain in that section because of plentiful rainfall.

A purebred bull association has been formed at Arvin, Kern County, with membership of 30. A Guernsey sire has been purchased.

Tulare County is preparing pleas for completion of the Sierra-to-the-Sea highway, 39 miles between Coalinga and Kings City not having been paved.

Plants of the California Peach and Fig Growers in Merced and Dinuba have been working overtime packing Christmas boxes to meet the gift demand.

There are now available for settlement in the Delhi state colony 75 farms, varying in size from 10 to 50 acres. Information may be secured from W. F. Packard, Delhi.

The ninth annual poultry show of the Stanislaus County Poultry Association at Modesto was declared eminently successful. Many sales were reported to have been made.

Settlers at the Delhi land colony are ordering trees and vines for spring planting. From the reports they have from nurserymen this spring will surpass all others in the extension of orchard and vineyard areas.

The tractor school conducted by the university extension at Watsonville last week had much larger attendance than the one held last year. Prof. E. J. Stirniman was in charge. The school has gone to Los Angeles County for the next session.

The Madera committee has finished its work of securing signatures to petition for formation of the San Joaquin River Storage District. Land owners on the west side who have not yet signed are asked to call at banks in their sections to sign petitions in order that the petition may be brought before the state engineer.

Horticultural Commissioner Brann of Tulare County states: "More rapid and efficient orange inspection was effected this season than heretofore through the 10 county testing offices and temporary force of 44 inspectors and titrators in the enforcing of the standardization requirements in the county, covering 58 packing houses.

Terminal freight rates have been assured Fresno following an intermittent legal battle covering a period of 11 years. Assurances of this victory were received this week from the interstate commerce commission by Traffic Manager Frank Hill. The fight to procure lower rates for communities having water transportation was begun in 1911. The decision just received is considered final.

## Southern California

Shipments of oranges for season of 1922-23 are estimated at 54,500 cars.

Nine carloads of lettuce were shipped from Imperial Valley on December 14.

Cotton ginning will be over in Palo Verde Valley by about the middle of the month.

The Riverside County cow testing association will start contest for six silver trophy cups on January 1.

Work has begun on state highway through the Malibu ranch, following condemnation suit filed by the state.

Chairman Nickerson of the Imperial irrigation board says that $500,000 was expended last year in levee construction.

Members of the California Bean Growers Association have received payments amounting to five cents on their crop.

An inspector for deciduous fruits is to be stationed in San Fernando Valley by Los Angeles County horticultural commission.

Quarantine inspectors recently stationed at Banning have intercepted many insect pests of citrus fruits and have found alfalfa weevil in packed goods of auto tourists.

A 24 hour inspection service is to be maintained at the Yuma crossing of the Colorado. The state pays for one inspector, Imperial for the second, the Colorado River Land Company for the third.

Lettuce growers of Imperial County held their annual meeting at El Centro, December 7. Marking of crates was one item of importance taken up. Shipping and marketing generally were considered.

A committee of lettuce growers of Imperial County will investigate wage scales in other sections for packers, box markers, etc. Committee is formed of Hugh Osborne, L. C. Siebert, Jack Leon, Roscoe Jones and H. R. Yerxa.

San Diego merchants are backing the Boulder Dam project by writing to Eastern manufacturers urging them to "jog memories of their representatives" as to importance of the project in increasing buying power of Southwest.

The San Bernardino County Beekeepers Club claims that 90 per cent of the bees in the county are represented in its ownership. Modern methods of marketing honey were discussed at the December meeting at the county court house.

At the annual meeting of the Imperial Valley Vegetable and Melon Growers Association at Brawley directors for the coming year were chosen: J. E. O'Neill, Brawley; Q. C. Webster, Brawley; J. K. Griffith, Calipatria; Alonzo Poole, El Centro; J. C. Fornter, Brawley; Ulman Hill, Calexico.

Agreements to proceed with drafting amendments to the water storage act of 1921, in order to facilitate organization of the Pine Flat water storage and conservation district, was made at a meeting of the executive committee at Fresno. Individual rights of districts will be strictly preserved according to W. P. Boone, chairman of the committee.

## The Coast and General

Australia has under wheat this year 10,000 acres.

There is considerable trade in sea turtles captured and dried in Mexican waters and shipped to China.

The olive crop of Portugal gives promise of being the largest in years. There will apparently be a surplus for export.

Over $15,000,000 worth of cane sugar was exported from the Fiji Islands in 1920. Bananas, coconut oil and paper pulp are important exports.

Italian colonists last week landed at Vera Cruz, 3000 families of them. Ten colonies of 300 families are to be established in different districts.

The most popular canned fruit imported into Indo-China is American canned white grapes which are consumed in great quantities by the natives.

Large shipments of West Coast Mexican tomatoes are being handled through Nogales, Arizona. The entire crop is figured in excess of 2,000 carloads.

There is an unusually large crop of walnuts, not only in California, but in France, Rumania and Manchuria. There is a large amount of the French crop still on hand.

Color and flavor of the citrus fruits in Florida have been greatly benefited by cool weather. Oranges are being shipped from Mississippi and Plaquemines Parish, Louisiana.

Europe in general is about 15 per cent behind her normal production of foodstuffs, says E. G. Montgomery, chief of the foodstuffs division of the department of commerce.

Courses in agriculture are to be established in all the public schools in Mexico. Short courses are being given to teachers during the Christmas holidays in the City of Mexico.

The War Finance Corporation has approved the application of the Louisiana Farm Bureau Rice Growers Cooperative Association for an advance of $500,000 to finance marketing.

The Baltimore & Ohio Railroad Company has inaugurated a new method of payment for milk shipments so that shippers may forward dairy products under a collect milk-cream waybill, collecting at destination.

Cattle and horses are in fairly good flesh in the Southwest though in Texas some stock will go into the winter in poor shape. In Oregon and Washington considerable feeding is being done.

In New England some apples have been so damaged by freezing as to limit their use to cider making. The crop has gone into storage heavily and storage facilities are reported to be full to overflowing in most areas.

The Douglas, Oregon, farm bureau turkey pool, consisting of 87,695 pounds of turkeys has been sold for 43 cents a pound, netting growers 41 cents. The birds were sent to San Francisco for the Thanksgiving trade.

During the war Russia, which before the war furnished Western and Central Europe with almost half of their grain imports, was completely eliminated as a surplus country. The Russian trade is now being supplied by the United States and Canada.

# Feeding for Eggs

By Jean A. Koethen

THE feeding of laying hens has two objects: First, to maintain the bodily health and vigor of the fowl; second, to provide material for the manufacture of eggs. There can be no eggs till bodily maintenance has been provided for.

All poultry feeds can be classified under three heads: Carbohydrates, which include all fats, sugar and starch; protein feeds, that is, feeds which contain a high per cent of protein, such as lean meat, milk, eggs and some seeds; and green feed, which contains various mineral ingredients called by the general name ash, and also, what is perhaps the very same thing, a something which we now call vitamines. Carbohydrates, protein and greens are absolutely essential to the well being of every laying hen. She may live and be fairly healthy on a diet of carbohydrates alone, but she will not lay many eggs. On a diet of protein alone she might lay eggs if the diet were not so rich as to destroy her health. Happily no feed is all carbohydrates or all protein. Corn, the most fattening of grains, contains one part protein for every eight or nine of carbohydrates, while wheat, the best all around single feed, is one part protein to about six of carbohydrates. Certain green feeds, which are not used for the protein they contain, nevertheless do add considerable of this necessary egg material to the ration. This is especially true of alfalfa, and this is why alfalfa is the best of all green feeds; it is greens and protein combined.

Since no grain is all protein or all fat or all starch it follows naturally that grains must be fed in combination with each other and with other feeds. And since no grain is sufficiently rich in protein to supply the protein needs of the body and have protein left for whites of eggs it follows that something more concentrated must be used with the grain in a laying ration. Beginning on this foundation scientists have built up an elaborate menu for the hen that is expected to lay an egg every day or at least two days out of three in addition to repairing the waste of her own body and keeping herself warm and active.

### The Scratch Feed

As it is grain that supplies heat and energy, grain is the foundation of the ration. The starch feed, containing a variety of grains, is sometimes called its balance wheel. It should contain enough fat to keep the hen warm and enough starch and sugar to keep her bones well covered and her blood circulating vigorously. One grain which is most important for every Leghorn hen in winter is Indian corn. It supplies the heat and fat which she must have before she can spare any material for eggs.

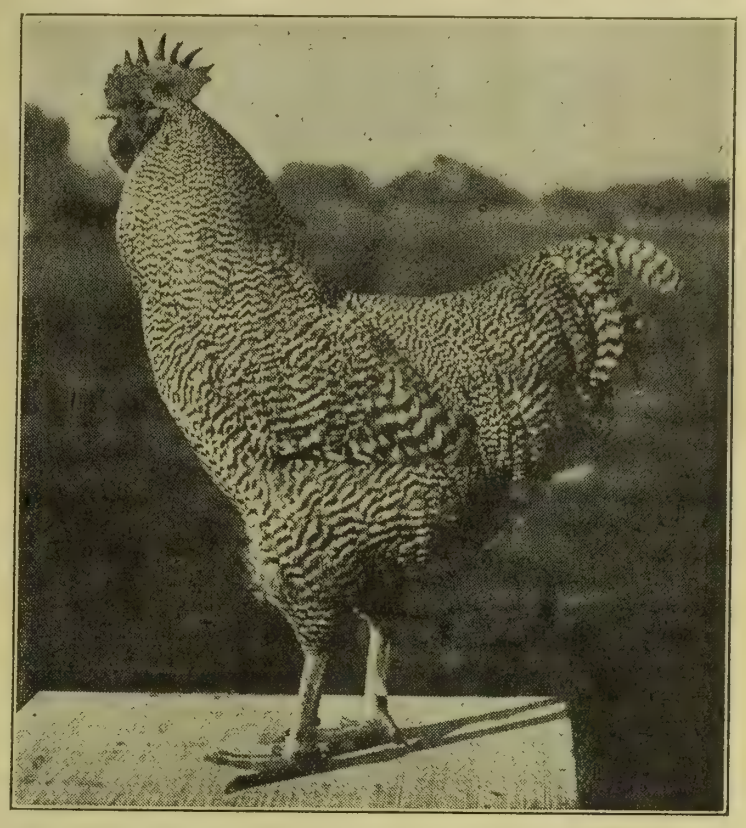
If too much hard grain is fed the hen will put on fat instead of making eggs, hence the supply must be limited. If too little hard grain is fed the hen may become so thin that she will collapse under the strain of laying. There is no hard and fast rule for amount, and the careful feeder will examine his hens on the roost from time to time to make sure that they are neither too fat nor too thin. If the abdomen feels too hard, as if a layer of fat were forming, he will cut down the grain feeding. If the hen is skinny, as if there were not an extra ounce of fat on her body, he will feed more grain.

A good grain mixture for average conditions is equal parts wheat, barley and cracked Indian corn. In hot weather the corn should be omitted. In very cold weather it may be half the ration instead of one-third. The barley may be either whole or rolled. When whole barley is used it is a good plan to sprout part of it, feeding it either with the regular scratch at night or as a separate meal in the morning.

The novice is often puzzled to know just how much scratch grain to feed. A quart daily for 15 hens is a safe allowance, but this may be cut down somewhat if increased production is desired. The poultry division of the state college of agriculture a few years ago advised the feeding of equal amounts by weight of scratch grain and mash. Now it announces that the ration may safely be made more than half mash during the heavy laying season. In one of the recent egg laying contests the grain allowance, including dry weight of sprouted oats, was 10 to 12 pounds daily for 100 hens, which is about a quart to 20 hens.

Scratch grain is usually given an hour or so before the hens go to roost, say about 4 o'clock at this season. The limited ration mentioned above is for mature hens but hardly suitable for pullets. The pullet just beginning to lay in the fall must have a little surplus fat if she is to come up to the demands made on her vitality, and a good many careful feeders believe that she should have all the grain she will eat. To this end the evening grain allowance contains all the birds will eat that night and a little more so that there will be something to start them scratching in the morning.

The poultry division has made the scratch feed a matter of careful study and experimentation and last year gave this scratch mixture to the contest layers at Santa Cruz: 80 pounds plump, recleaned barley; 120 pounds plump, whole wheat; 200 pounds clean, cracked yellow corn. The scratch mixture used in 1920-21 contained equal parts wheat, cracked corn, milo maize and whole barley. It will be noticed that the proportion of Indian corn was greater in 1921-22, and great emphasis was placed on quality.



**He Brought $70 at Cockerel Auction**

Barred Rock bred by Mrs. H. B. Kleinsmith of Hoff, Oregon, brought top price for Barred Rocks at Tulare Cockerel Auction. His dam has certified record of 245 eggs per year; his sire's dam, 304 eggs per year.

### Dry Mash

Hard grain maintains the health, energy and vitality of the hen. Mash provides material for eggs. The foundation of the mash is ground grains of several kinds, with bran as its center. Bran is the one most important feed for all ages of poultry. Hens will lay fairly well on a mash of bran alone, and chicks make a symmetrical growth on bran with a little grain added, if only they have range. To bran is added in a well balanced mash at least one other ground grain, a meal or fish meal and one kind of vegetable protein.

So many good mashes can be purchased already prepared that it is hardly worth while for any poultryman to attempt to mix his own. Certainly no amateur should try it until he has learned the how and why of a balanced ration. The following mash mixture, which was used at the Santa Cruz contest last year will serve as an example of combination required in a mash, as well as of the poultry division's opinion of the different constituents. This mash contains 240 pounds wheat bran; 160 pounds wheat middlings; 100 pounds ground oats; 100 pounds corn meal; 40 pounds soybean meal; 40 pounds linseed meal; 60 pounds fish scrap; 60 pounds meat scrap; 2½ per cent finely granulated charcoal and ½ per cent finely sifted salt.

Ground oats are not always obtainable unless the poultryman has them ground especially for his own use. When oats of good quality can be had, ground oats are probably the one best ground grain, next to bran. Corn in some form is essential, but when cracked corn is used as part of the scratch it is a very good substitute for corn meal in the mash. In this contest ration both cracked corn and corn meal are used.

Either fish scrap or meat scrap may be used in the mash, provided quality is right, but the poultry division prefers to use both rather than either one.

The choice of a vegetable meal is often difficult, and it is well to remember that the poultry division has found soybean and linseed (oil cake) the best two. In one of its recent feed letters it allows for this part of the mash, 10 pounds of soybean or linseed, and 10 pounds of coconut, soybean, linseed, cottonseed or ground beans. In other words, if only one is used, it should be linseed or soybean; if two are used, one may be cottonseed or coconut. Cottonseed, for some reason, is less digestible and more likely to clog the digestive organs. I believe soybean meal is considered the one best vegetable meal.

The mash is kept before the layers in hoppers constantly and should be replenished daily because the hens are inclined to pick out what they like best and leave the rest. When heavy laying is especially desired a moist mash fed either early in the afternoon or the last thing before the hens go to roost, is added to the dry mash. This is moistened with sour milk if it is available, otherwise with water.

### Green Feed

It is not necessary here to emphasize the great importance of green feed, except to say no one should undertake commercial poultry keeping until he has green feed or knows where to get it. In some sections alfalfa growers deliver fresh cut alfalfa two or three times a week to poultrymen, and this is the easiest way to get green feed. In most sections, however, the poultryman is thrown on his own resources and must raise his own greens or go without. Such a one will find an acre or so of alfalfa the best solution of the green feed problem during the alfalfa season. During the winter green barley is the best solution, but kale and stock beets are a great help.

Up-to-date poultry houses are now provided with a wire receptacle for greens, which is placed in the shadiest place in the house and keeps the green feed fresh all day. It is fed as early as 9 o'clock so that the hens may peck at it the whole day, just as they would if they were on range.

### POULTRYMAN'S CALENDAR—JANUARY, BEGINNING TO HATCH

While it is quite true that in California successful hatching can be done any month in the year and that fall hatching is often profitable, it is also true that the real hatching season begins with January. Most hatcheries are going at full capacity by the middle of the month so that orders for February may be promptly filled, and commercial poultrymen who do not do their own hatching are getting their brooders in readiness for the February hatch. Some poultrymen who do commercial hatching put the January chicks in their own brooders, partly because they believe January is as good a month as any for getting out chicks, partly to leave the later chicks for those who prefer them later. Brooders and brooder houses must be in order this month, breeding stock mated and plans for feeding the young stock completed. "Hatch early" is a most important rule. Early chicks are huskier, mature more rapidly and are more easily cared for. Vermin are not rampant in March and April as they are in May and June, and damp ground under foot is a decided vitalizer. Plan for as much range as possible for the youngsters. Every vacant foot of ground should be planted to barley for them to run on, and planted in such a way that each successive brood or hatch shall have its own clean yard with fresh young greens. Polluted soil is one of the greatest handicaps of the late hatched chicks.

# Prunes Other Than French

By Leonard Coates

A PRUNE is defined as a plum which may be cured without fermentation, the pit not being removed. There are, however, two very distinct types of prune coming under this definition, a fact often overlooked because of lack of knowledge or observation or both, on the pomological side of the question, and unfamiliarity with several varieties of prune of recent origin.

These types may be described as clingstone and freestone, although those coming under the former head are more properly "half-cling," and include what are commercially known as "French prunes," also Imperial, Improved French, and Sugar, although the latter would come very close to the "Freestone" type, and Robe de Sergeant. One other distinct type of prune can only be classed under the name "Silver," including Silver prune or Coe's Golden Drop, and Golden.

The varieties included under the "Freestone" heading are Italian, or Fellenberg, Splendor, Standard, and a prune originating with R. E. Burton of Vacaville, but which I do not think has been named, although it has fruited for many years. I have been privileged to test this fruit, and call attention to it because I believe it to be the best of this class, the tree, also, is phenomenal, in its tremendous vigor.

The prunes in this class will average larger than French prunes, and, when dried have a slightly more acid flavor, although sufficiently sweet to require no sugar when cooked. There are some others, notably an improvement on the Italian but which are not propagated to any extent.

The chief distinguishing feature in these prunes is in the nature and relative position of the pit, it being long, slender, smooth and entirely separate from the flesh, so much so that it will drop out of the fruit when the latter is cut open.

All of these features being recognized, the commercial significance will be appreciated, as all of these varieties, consolidated under one market name, would mean a factor in the prune industry of no small importance. The Silver prune, with others of its class, is practically a back number, having received its commercial death at the hands of the "market." The fiat went forth that the market must have prunes of this class bleached almost white, the result being that the product had such a sharp, metallic flavor that the consumer did not buy twice.

The same thing was tried with French prunes, these being sulphured until they were bright red, and called "Rubys." However, they soon followed the Silvers. As a digression, and possibly a warning, the Thompson Seedless, or Sultanina, may become so much of a bleached article that the public will buy less of it. The state department of agriculture has taken a step which will add enormously to the prestige and popularity of California fruits in insisting that nothing underripe or immature shall be shipped. May the department also watch closely that the quality of our fruits is not injured in any bleaching process!

It is a fallacy to suppose the consumer does not recognize and appreciate quality, but, unfortunately, many of the great exporting firms act on this fantastic assumption. Only a week ago I chanced to be talking with the representative of one of the largest fruit shippers and was speaking of the extra quality of certain varieties in a specific locality. "Quality, nothing; all we want is what brings the cash," was his answer.

Freestone prunes, whatever may be their commercial brand, have a great future, and California growers should act on this premise. It is significant that Oregon and the great Northwest are not content with "Italians," they are straining every endeavor to find a "French" prune which is as good or better than what is grown in California.

Had Californians equal enterprise they would be planting and curing the same prunes that have made these more northern states famous. It is fatal to rest content in one's own self imposed superiority. The taste of the consumer is varied. Some markets like the Oregon Italians, some prefer the French; we can grow both equally well; why not do it?

La France
Giant Everbearing
Red Raspberry

WARNING!
Why you should buy it directly from its originator

A valuable plant, such as La France Raspberry, which gives a continuous crop of big, juicy, sweet berries from June to November, encourages imitation. It is easy to propagate suckers, or whips under glass, or to sow the seed of the berries and get an enormous quantity in one season. But such products neither look like the original nor give rich results. The originator, John Scheepers, Inc., grows on a special farm in Stamford, Conn., nothing but the true La France berry. This berry, the only one on which you can count to be consistently hardy, prolific, and healthy, is never the product of artificial propagation or over-propagation.

A NEW MARKET FOR PACIFIC FRUIT GROWERS

The 3-day trip from the Pacific to the East softens, shrinks and makes moldy the average raspberry. La France, however, retains its original flavor and coloring. This is proved by experiences such as that of a grower in Mountainview, Clara County, California, who sent part of a carload of berries grown from La France and disposed of the entire shipment in New York at record prices. You will do well to join those shrewd growers who are planning to go into La France berries extensively for Eastern markets.

Average 3 to 4 Feet in Height

It is simple for you to know whether you are getting the original La France or a feeble offspring grown by someone who purchased a few La France plants a year ago. The original, as illustrated below, is shipped averaging three to four feet and more in height. The wood is at least a half-inch thick, and on the clump of roots several suckers may be found. Any plant claiming La France qualities and not presenting this appearance should be mistrusted.

La France is endorsed by leading horticulturists and berry growers. It has received medals and first-class certificates from the Massachusetts Horticultural Society, the Horticulural Society of New York, the American Institute of Science, and other leading agricultural and horticultural bodies.

Dealers Near You

There are some important and responsible growers, dealers and nurserymen, who have purchased a great many La France Raspberry plants to sell to their clients. These are not raspberry plants, propagated by them, but they are plants procured from the La France Raspberry farm of Connecticut. If you wish to buy La France from one of these dealers in your vicinity, write to the La France Farm of Stamford, Connecticut, asking for the name of a responsible concern in your locality through which you may purchase true, strong fieldgrown stock of La France Raspberries. Or you can order them direct from us.

# Walnut Pruning Demonstration

By Ernest Braunton

LAST week the Los Angeles County farm adviser held five walnut pruning demonstrations; that is, this official or one of his assistants called the meetings to order and introduced the speaker and pruner, Walnut Specialist Hooper, of the agricultural extension service, who was appointed but a few months ago and has the state for his field.

Very little is known yet as to the very best way of pruning the walnut except that it needs little annual cutting and that little is largely confined to shaping the tree. Three pruning plots have been established in the south end of the state, but it will require several years experience and observation before anything definite or of value is known. It has been proven that a heading back will bring a heavier crop the first year of bearing, but not in after years. One serious result of heading back the young tree is to make all the branches break out from nearly the same point on the trunk. As the tree grows these compete for the restricted space around the trunk. Crowding soon begins and in time some of them have such an insufficient hold upon the mother trunk that they break away and great injury is done thereby. At considerable labor and expense some orchardists have by block and tackle brought these branches into place and bolted them securely, in the end often having a fairly good tree. But the better way is to train the young properly at the beginning.

### The Proper Start

Mr. Hooper stated that Dr. Batchelor of the Riverside station had outlined a method of training that appealed to him as being good. This is a central leader system where the original leader is preserved, or, if it has been cut off by nurseryman, a new leader has been trained to take its place. From this central support the branches are allowed to develop in every direction, restricted, of course, to the proper position and number. None of the young branches are cut off but when a foot or more long are pinched off at the terminal so they make no more length growth and will throw out leaves to shade trunk and branches until permanent branches qualify for shade when the pinched branches may be dispensed with. Little real pruning is necessary at any time if the early training is properly done.

When trees have matured without training or youthful pruning some need drastic treatment. Five points should be remembered when going over such trees. 1. Take out dead wood. 2. Remove decadent branches or those that evidently will be lost if left long enough. 3. Remove branches having a weak union with the trunk. 4. Remove crossing branches or those that spring from one side of the tree, push across the center, and come out on the other side. 5. Remove competing branches or those too close together growing in the same direction. Whenever pruning is necessary, make the cut close to and in line with the trunk or parent limb. Asphalt is probably the best paint for wounds, using gasoline as a solvent if one is found necessary.

At the close of the meeting the owner of a large orchard said it was a very hard job to establish young trees used for replacement in an old orchard. He said he had dug very large deep holes for the young trees, put plenty of manure in the bottom, below the roots, and applied liberally of manure to the growing tree. Further, he had run a sub-soiler as deeply as it was built to go, eight feet away from the young tree, circling it several times. In spite of this and continued care the old trees so pulled on the area rightfully belonging to the young trees that the latter made but slow and discouraging progress. It will be gleaned from such experiences how advisable, how necessary it is to watch carefully the whole orchard to see that no tree gets in such poor condition that it has to be removed and the attempt made to grow another in the same position.

### CITRUS INSTITUTE

The annual citrus institute is announced to be held at San Bernardino during the National Orange Show February 16-26. The theme selected by the program committee is "Fall Culture and Treatment of Citrus Trees for the Rejuvenation of Old Groves."

## PRESS THE BUTTON

By R. P. Dougherty

I HAVE always said that the next time I was born I intended to be musical and mechanical. Good music I enjoy and the results of good mechanics, but the why and the how of them both are mysteries sealed. Perhaps a poor ear can be blamed for the one deficiency but certainly it is paucity of gray matter that must account for the other. All this is a preliminary to explain the satisfaction in hearing a remark by a similarly minded unfortunate. In discussing the wonders of electricity before a small group an inventor of national fame said: "I cannot tell what electricity is nor why it gives us that incandescent light." And "the young lady across the way" interposed brightly: "Why it's quite simple—you push a button and the light appears."

And thank goodness; it is just as simple as that—for us who use it without waiting to study out the why. You push a button and the light appears that brightens a home evening or helps you to find a lost coat button that has rolled into the darkest corner of the closet.

You press a button on Monday morning and the washer begins its weekly task of making sweet and clean.

You press a button and your iron heats and stays evenly hot while you pass it back and forth over the Tuesday ironing out on the cool back porch.

You press a button and Sister watches the making of toast on the breakfast table, hot and browned just right for every member of the family.

You press a button and the bathroom is made cosy for baby's bath.

You press a button and the vacuum cleaner hums across the rug to gather up in its bag the dust and sand and lint.

You press a button and the percolator begins to bubble for the fragrant noontime coffee.

You press a button and the electric fan sends a stream of fresh air through a close, hot room.

You press a button and the sewing machine, like a beneficient fairy, takes the long seams with a whir.

You press a button and the heating pad, cosy and warm, is tucked between the cold sheets to assure a night's sound sleep.

Talk of Aladdin and his wonderful lamp! Why, Aladdin had only a big, black ugly genie to do his work. You press the button and the something we call electricity comes swift, silent and unseen and lifts and carries and churns and bakes and washes and irons and warms and cools as you direct.

"Of all the things electricity does for you what do you value most?"

"O, the lights," you say, I could give up everything but the lights—Still, I don't know, there's my iron, how could I do without that, and the sewing machine, and that heating pad—Don't let's play I have to choose just one. I feel like the poor man the debating societies used to orate over—you remember—thrown into the water with his wife, his mother and his daughter, which should be save? But one thing I am perfectly sure about, my Christmas money is going to buy the next electrical appliance on my list, number eight, I have seven already."

## PEACH AND FIG INSTITUTE

The food value of dried fruits with special reference to peaches and figs will be discussed by Professor M. E. Jaffa of the University of California at the Peach and Fig Institute which will be held at Merced, January 19 and 20 under the auspices of the California Peach and Fig Growers. All dried fruit growers in California, whether members of the association or not, are invited to attend the conferences.

One of the first comprehensive contributions to knowledge of fruit food values was issued by the government in 1901 under the signature of Prof. Jaffa, entitled "Nutrition Investigations, Among Fruitarians." His investigations brought out the fact that fig juice added to the milk diet of babies caused appreciable improvement in growth and health.

## BRIGHT PROSPECTS IN SAN BENITO

Horticultural Commissioner McKinney of Hollister writes as to conditions in San Benito County:

The apricot outlook was never so bright from the standpoint of fruit buds and spurs as now, while the early rains make one hopeful they will have all fallen before blooming time. Rains at blooming season are infinitely worse than brown rot (popular opinion to the contrary notwithstanding). Prunes too look remarkably well and from appearances now San Benito County is "set" for a banner season during 1923.

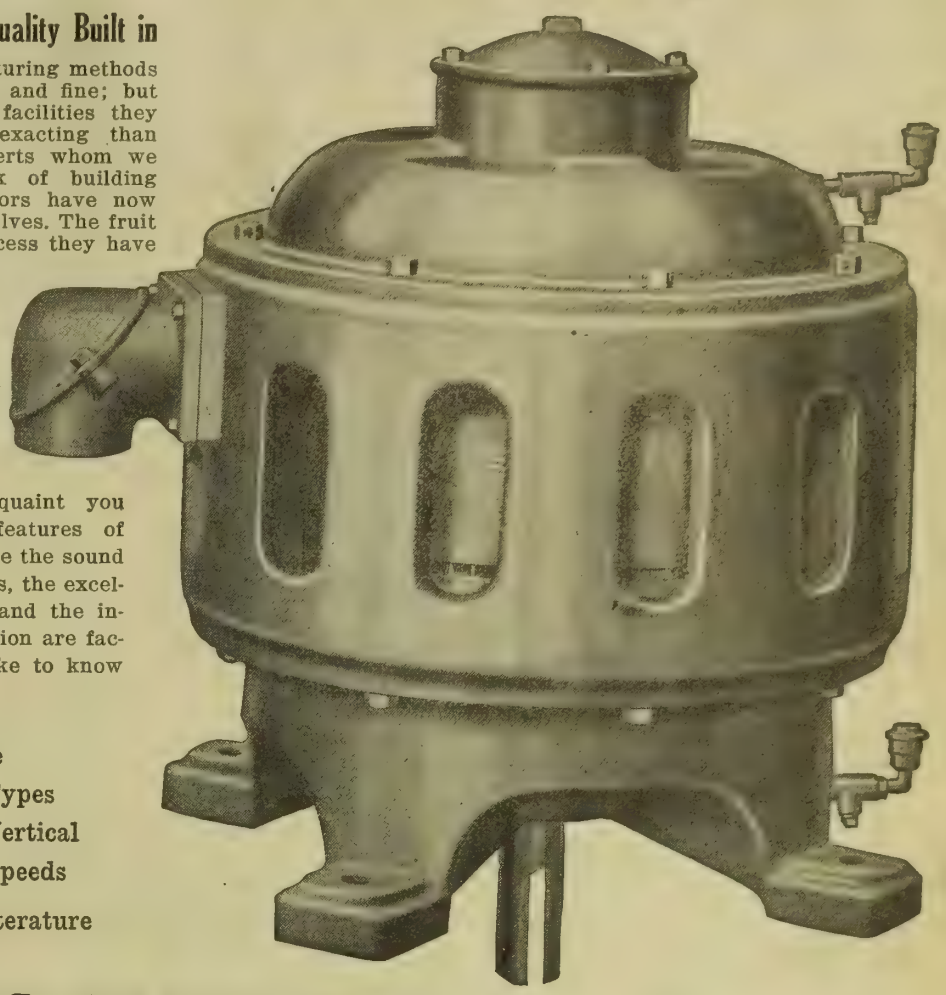
Range conditions are good, grain should be better than last year, and all in all this extremely optimistic letter is merely a statement of facts as they are.

A bill has been introduced in the legislature of Queensland, Australia, to give legal assistance and financial backing to the Queensland Primary Producers' Association, formed for the marketing of Queensland products at home and abroad. Under this bill the state will be divided into 19 agricultural districts.

U. S. MOTORS

--The Motors With Quality Built in

U. S. MOTOR manufacturing methods have always been high and fine; but with our new factory facilities they are better and more exacting than ever before. The experts whom we entrust with the work of building quality into these motors have now literally outdone themselves. The fruit of their efforts, the success they have accomplished, is revealed in the U. S. Motors that have been produced for months past.



We should like to acquaint you with the distinctive features of U. S. Motors. We believe the sound manufacturing principles, the excellence of workmanship and the integrity of our Organization are factors that you should like to know about.

Investigate the Aspinwall No. 3 Potato Planter—one or two row With or Without Fertilizer Attachment

The secret of the success of the ASPINWALL POTATO PLANTER is in the fact that it is AUTOMATIC, ECONOMICAL, EFFICIENT, and requires only ONE MAN TO OPERATE. It is the 100% planter—less labor, less time lost and less waste of seed. One man can plant from five to eight acres a day and PLANT THEM RIGHT.

The New Aspinwall No. 3, with or without the fertilizer attachment, is absolutely automatic, is free from trouble and positive in its planting.

# Legal Phases of Cooperative Associations

A discussion of the legal phases of cooperative associations in language that can be understood by the layman, is contained in Department of Agriculture Bulletin 1106, just issued. This is the first of a number of publications on various phases of cooperation which the department is preparing.

An attempt was made to examine all the decisions of courts of last resort in this country relative to cooperative associations. The principles applied and announced in these decisions are set forth together with references to the cases cited:

Some of the subjects treated are the elements and characteristics of incorporated associations or corporations, how they are formed, the nature of a charter, the liability of an association for promotion expenses, the responsibilities and liabilities of officers, directors and members, the right of an association to restrict the transfer of its stock, the legal effect of an attempt to limit the amount of indebtedness that an association may incur, and the differences between stock and non-stock associations.

The nature and characteristics of contracts entered into by cooperative associations with their members are discussed. In this connection such subjects as liquidated damages or penalties, the right of an association to pool the products of its members and to determine the grade of the products handled are treated, as well as the right of an association to a decree requiring the specific performance of a contract entered into by it with a member and the right of an association to an injunction to restrain a member from breaching his contract with the association.

As many cooperative associations act as agent for their members in handling and marketing products, the subject of agency with reference to such associations is treated, and the liability and responsibility of an association and its members under such circumstances are considered. The matter of unincorporated associations is also discussed and the rights and liabilities of members of such associations, as between themselves and with reference to third persons, are pointed out.

The bulletin also goes into the subject of monopolies and in this connection deals with the Sherman and the Clayton anti-trust acts. Section 6 of the Clayton act is specifically discussed. The Capper-Volstead act, which authorizes the association of producers for the purpose of handling and marketing their products, and which confers on the secretary of agriculture jurisdiction over such associations as comply with its terms, is discussed quite fully. The liability of cooperative associations for income taxes is also treated. In the appendix will be found a form of by-laws for use by cooperative marketing associations together with a form of crop contract.

A limited number of copies of Department Bulletin 1106, entitled "The Legal Phases of Cooperative Associations," are available for free distribution. Requests for the bulletin should be addressed to the United States Department of Agriculture, Washington, D. C.

---

The California State Automobile Association has started campaign to secure from congress appropriation of $7,500,000 for building roads within national parks. Yosemite's share of this sum would be $1,500,000.

## RANCHERS AND FORESTS—THEIR MUTUAL INTERESTS

By Charles H. Shinn

When national forest work began in California the perfectly natural attitude of a majority of land owners, whether in the "Reserves" of 1900 or in the adjacent foothills or far off in the heart of the great valleys, was one of questioning doubt. Thousands of men who were toiling with might and main to improve their ranches, support their families, educate their children and lay by a few dollars for old age, could not feel any enthusiasm on the subject of forestry. They only saw that timber lands with occasional bits of tillable area were "withdrawn from entry."

The pioneers of the forest service, many of them the sons of farmers and of mountain loving ancestors, felt this situation from the first hour of their work, and felt it more and more strongly with every year. All through the beginnings of what were called "Forest Reserves" and were under the land office of the department of the interior until transferred to agriculture in 1905, the growing desire of every broad minded forest officer was to make the forests more and more useful to every owner of a ranch, near or far, in other words, to the people of California. Free permits for the use of timber needed on ranches for fencing or for firewood, grazing within the forests for livestock (and without charge for the small ranch owner's work stock and milk cows)—these were among the earlier steps taken.

But before long one felt without any definite words the growth of goodwill between the forest people and the men, women and children of the adjacent ranches. It was most fortunate from the purely human standpoint that the first ten years of forest work were long before the age of autos and when fences were few. The rangers rode everywhere, stopped over night in all sorts of places, received a vast amount of hospitality and returned it as they could; came to love and be loved by hundreds of ranch folk as mutual understanding of their respective works and aims grew.

Before long the forest officers were asked to lend books and periodicals about forestry, and some of them did a good deal of this, giving especial attention to school libraries. One of the pioneers who loved his work used to tell the ranchers: "Everybody ought to start the day with a shout of 'God bless our mountains and forests.'"

## BEST OLIVES EVER

"The best pack of ripe olives ever produced in California," is the statement made by J. J. Hoey, secretary of the California Olive Association, in discussing the present olive season's activities today. While the olive crop of the state is short, in view of the bearing acreage the quality of the fruit is exceptionally high.

As a result of the recent standardization of ripe olives by the association, the trade throughout the country is now much better informed regarding grading, quality, containers and the like, and renewed interest is being shown in the product. The demand has picked up materially in the past six or eight months and operators are feeling confident that the present crop will move out under favorable marketing conditions.

## LAKE COUNTY PEARS

A Lake County subscriber sends amount of crop and expenses incurred on his pear orchard for 1922. From seven acres 28 years old the yield was 99 tons. From six acres seven years old he picked 13 tons. For the 112 tons he received $60 a ton, or $6,720. He paid out: for picking, $450; spray material, $84; spray labor, $27; irrigation labor, $20; labor at well, $35; equipment depreciation, $32; Pear Growers Association, one dollar a ton, $112; a total of $760. This did not include his own time, for he was on the job all the year.

## INFORMATION ON GAME LAWS

Three publications of interest to the hunter and trapper have just been issued by the United States department of agriculture:: Directory of officials and organizations, state and federal, concerned with game protection. Game laws for 1922, giving summary of provisions of federal and state laws, also Canadian laws, now in effect. Laws relating to fur animals, 1922, federal, state, Canadian and in Lower California. These may be secured free from the California Fish and Game Commission, Forum Building, Sacramento, or U. S. Department of Agriculture, Washington, D. C. On last page of each of these bulletins may be found list of other publications relating to game which may be secured free or on payment of nominal charge of 5 or 10 cents.

## NEW GOVERNMENT GARDEN

Owing to the loan of 20 acres of land at Palo Alto by Stanford University the breeding of new deciduous fruits has been shifted to that place from the plant introduction gardens at Chico. This change carries the work into a district where there are large deciduous fruit interests and therefore more favorable to this line of breeding than the former location.

---

J. W. Irwin of Lindsay, who has for the past 12 years taken a great interest in the production of the wonderful pomegranate, reports satisfactory prices for his crop of 40 tons of this fruit this year. He has shipped two solid carloads of pomegranates to the eastern market this fall, the first netting him $1070.94 and the second, $1044.11. The remainder of the crop was marketed locally, the fruit selling from four to seven cents per pound.

---

A series of soil improvement meetings is being held through the Imperial Valley to arouse interest in crop rotation, planting of legumes, and fertilization.

*The way to*
**Big farm returns**

PRODUCTIVENESS of the average farm depends on the availability of water. That is why a Byron Jackson deepwell turbine is the ear-mark of a prosperous farm for it places unlimited quantities of water at the owner's command.

The accompanying photograph of an installation in the San Joaquin Valley tells its own story of dependability, economy and efficiency—a worthy successor of its line, the first deepwell turbine to be built.

The Byron Jackson name plate on a pump is a guarantee of correct installation and an assurance of complete field service throughout the years of its operation.

*This is a Deepwell Turbine year.*

# Questions and Answers

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Trellising and Fertilizing Fruit

Will appreciate information on trellising fruit trees, also on fertilizers to increase size of fruit.—Subscriber, Murphy.

Not knowing the nature of your soil or the cultural methods you have practiced it is rather difficult to say just what is needed to make your fruit size up. Usually any of the commercial fertilizers put up for citrus fruits, if properly applied and followed by good cultivation and proper irrigation, will produce the desired results, but if your soil is run down or impoverished an application of ten to 15 tons of stable manure to the acre will be very beneficial. Cover crops, when properly handled and followed by the application of commercial fertilizers, also help in making better sized fruit. In fact, anything that tends to improve the condition of your soil will make your trees more vigorous, increase production and improve the quality of the fruit.

### Grafting Navels

Please tell me if I can graft Navels to Valencias and how to do it.—Subscriber, Anaheim.

All varieties of citrus fruits can be budded or grafted on each other. Grafting is not often practiced as it is much easier to work over citrus trees by budding. For directions refer to article by Hodgson on "Top-working Citrus Trees," that appeared in the Cultivator of November 19, 1921. If subscriber does not have that issue we will be glad to mail it on receipt of name and address. We would suggest, however, that it would be better to engage a professional budder to do the work unless subscriber is familiar with budding methods.

### Keeping Veal

I am going to kill a calf. Please tell me how to keep the meat for six or eight weeks?—Subscriber, Hanford.

Let carcass thoroughly chill after killing. Cut in medium sized pieces. Rub each piece with salt in proportion of ten pounds salt to 100 pounds meat and let stand overnight. Prepare a brine of 10 pounds salt and 2 ounces saltpeter to 4 gallons water. This is about the quantity required for 100 pounds meat. Pack meat in clean barrels which have been thoroughly aired and scalded. Add brine. Keep meat submerged by wooden floats. Store in cold place till needed. Freshen in clear water when needed. If brine at any time become slimy or the odor objectionable, pour off and replace with newly made brine in same proportions. Canning of part of the veal will be found a very satisfactory way of preserving. Here is the way an Escondido subscriber does it:

We first roasted a large portion of the meat, then sliced and packed it in jars, covered with gravy and sealed. Second, we cut strips about an inch square of all the suitable meat left and placed it in a strong salt water over night. Next morning we hung it on the line in the open air, if sunny, or over the kitchen stove. Cover with cheese cloth to keep off flies and dust. It will take from two to four weeks to dry thoroughly. It should then be placed in an unwashed flour sack to prevent mold. This is what the Mexicans call jerky, and there is no meat any sweeter than roasted jerky. Third, all bones and meat left were boiled in a fireless cooker with onion and salt. When done some of the meat was packed in jars and covered with stock. The rest we ground up and made into mince meat by adding salt and pepper to taste. This was also packed in jars, covered with stock and sealed. The surplus stock was also packed in jars and sealed to be used for soups and gravies. All of this meat and stock I canned in Economy jars as they are self sealing and the only jars I have had absolute satisfaction with in canning meats. After the jars are prepared as above I place them in a false bottomed boiler (washboiler will hold 14 or 15 jars) with water to necks of jars and boil three hours. This insures their keeping.

### Yield of Strawberries

Please give me the largest yield per acre on record for strawberries; the first year or some year plants were set; largest yield for second, third or fourth year after planting; variety of berries making the record; sections where grown; if possible name of grower.—Subscriber, Summit.

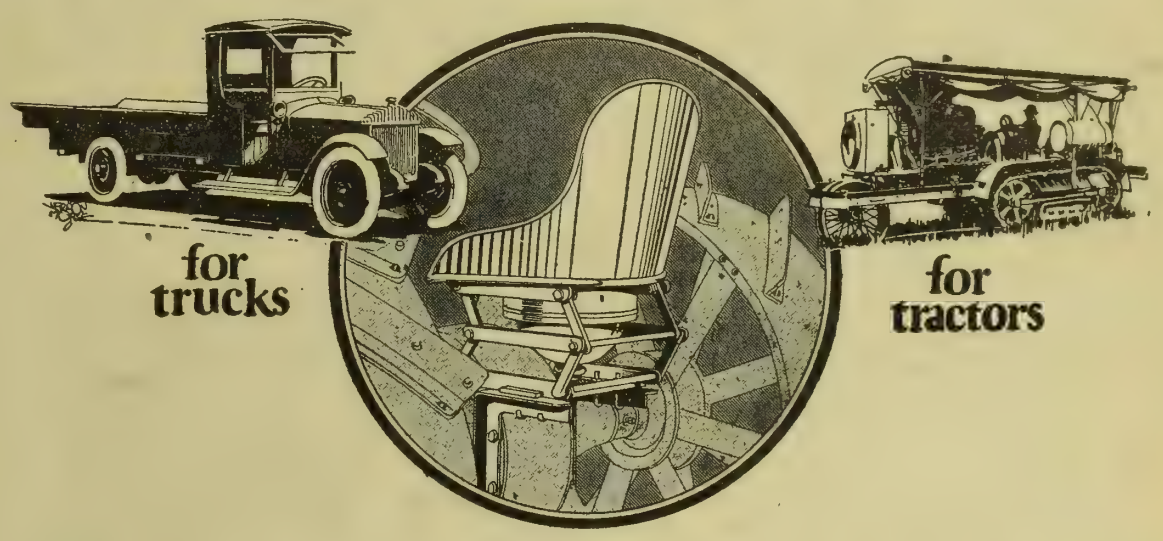
Record yields of strawberries particularized as suggested by the inquirer are not available but the Cultivator would be glad to open its columns to such items as its readers may send. The best financial return we have ever reported was some 12 or 15 years ago when Q. A. Lobingier produced a crop which brought a return of $2,600 from exactly one acre. This was on a tract a little south and east of San Gabriel in Los Angeles County. If we remember rightly the fruit was sold under contract at a flat price of 6½ cents per box. We do not recall the variety but do remember distinctly regarding Mr. Lobingier's preparation of the soil. One hundred tons of stable manure were applied to the one acre of land. It was deeply plowed under and a few months later the plants were set. We believe this was during the month of January, and one year from the time of planting the record was begun and every penny taken in from that acre during the following 12 months reported.

### Spraying Citrus

Please give me some information about spraying citrus fruit orchards, giving calendar of when to spray for the different diseases. Where can I get this?—Subscriber, Mercedes, Texas.

Complete information on spraying in California will be found in the California Cultivator of September 24, 1921, a special pest fighting issue, which is being mailed to subscriber. But we doubt if this information would apply in your section as the time of spraying depends entirely on the condition of maturity of the scale; and your climatic condition would probably change the time of hatching so that the proper spraying time would come either earlier or later than it does here in California. For scales the proper time to spray or fumigate is just after the young scale hatch out. On account of their not all hatching at the same time it is necessary to wait until the large majority are out before applying the spray. Here the proper time is usually six weeks or two months after the first young scale appear. If you wait longer than this, those first hatched out will get past the easy killing stage and poor results be accomplished. It is possible that your climatic conditions may make the hatching period more uniform, in which event a better kill will result, however it is never possible to get them all and unless the work is very carefully done so that the spray material hits every part of the tree the results are bound to be very unsatfactory. Your horticultural inspectors should be able to give you more definite information regarding the proper isfactory. Your horticultural inspectors and diseases, than anything you can get from California.

SEIBEL
AIR SPRING SEAT



Drive Your Tractor and Truck Minus Jolts and Jars

*At last!* The perfect seat for tractor and truck—a seat that *positively frees the driver from all jolts and jars,* no matter how rough the going.

—a seat that *protects the spine and kidneys,* that rids you of the sore and stiff feeling in back and legs.

—Attach a Seibel Air Spring Seat to your tractor and truck, and finish the day *like a two-year-old.*

—Not an air cushion, but a complete seat built on the pneumatic principle—*none other like it in the world.*

—It will last for years. Replacement parts can be obtained at nominal cost. Attached in a few minutes. All tractor attachments provided.

—If you want ease and comfort—if you want to preserve your health—*try the Seibel Air Spring Seat at our risk.* See trial offer below.

## Keep Musterole on the bath-room shelf

Years ago the old-fashioned mustard plaster was the favorite remedy for rheumatism, lumbago, colds on the chest and sore throat.

It did the work all right, but it was sticky and messy to apply and my how it did burn and blister!

The little white jar of Musterole has taken the place of the stern old mustard plaster.

Keep this soothing ointment on your bathroom shelf and bring it out at the first cough or sniffle, at rheumatism's first warning tingle.

Made from pure oil of mustard, with the blister and sting taken out, Musterole penetrates the skin and goes right down to the seat of the trouble.

Order Musterole today from your druggist. He has it in 35c and 65c jars and tubes; hospital size, $3.

The Musterole Co., Cleveland, Ohio

### A NEW YEAR'S SUGGESTION

When you're criticising others
And are finding here and there
A fault or two to speak of
Or a weakness you can tear;
When you're blaming some one's meanness
Or accusing some of pelf—
It's time that you went out
To take a walk around yourself.

There's lots of human failures
In the average of us all,
And lots of grave shortcomings
In the short ones and the tall;
But when we think of evils
Men should lay upon the shelves
It's time we all went out
To take a walk around ourselves.

We need so often in this life
This balancing of scales,
This seeing how much in us wins
And how much in us fails;
But before you judge another—
Just to lay him on the shelf
It would be a splendid plan
To take a walk around yourself.—Anon.

### THE EMPTY HOUSE

By Eveline Nutter

(Concluded)

The young man laid his hand lightly on her arm. "Not to take Alice's place, dear," he began, but she stopped him with a weary shrug of her thin shoulders.

"Tell Hortense to put them to bed. I presume we'll have to let them stay till morning to satisfy him."

She looked dazed, and her voice was strained and unnatural.

"I—I believe I'll go and lie down."

Tom lifted her in his arms, and it frightened him to feel how light she was.

Her face was white and drawn and two great tears forced themselves from under her closed eyelids, and she brushed them away with a restless motion of her hand. He left her on the couch in her room and went down into the dimly lighted library to tramp back and forth, back and forth, with a dull ache in his heart and a sick feeling of the injustice of a Fate that with one blow had robbed him of wife and child. As for the two little boys Dr. McLean had left with them, he was absolutely indifferent, he told himself. And yet, if they had interested Margaret, what a pleasant experience it would have been to have filled their little stockings, to have fed them and romped with them and to have changed their wistful look, for a while, to one of jolly contentment.

"Funny thing," he muttered, "I never used to notice people's eyes much when I was happy myself."

And then he tramped on, back and forth, back and forth, with his hands thrust deep into his pockets, and his fine broad shoulders slumping, as though he indeed saw no hope ahead. At last he sank into the depths of a great leather chair, and sat, with his square chin in his cupped hands, gazing into the fire, seeing not the dying embers, but bright pictures of the past. And always there was Margaret, not wan and sorrowing and forlorn, but gay and warm with life. In those days he had called her Meg! There were pictures of a soft-haired baby, a baby that had changed so quickly to an adorable little girl. Then the fire flared up again and the picture was gone. For a moment he shut his eyes, but he could not shut out the gruesome image that had flashed into his brain. He groaned, and searching in his pocket, found a tiny miniature case. He opened it, and there looked out the radiant features of a sunny haired child. His lips unconsciously lost their grim line and curved into a smile, and his blue eyes glowed softly, just as the blue eyes, so like his own, in the painting, did.

Suddenly he heard the swish, swish of silken garments. He got up, letting the miniature slip back into his pocket, and turned. There stood Margaret.

"Tom;" she cried, breathlessly, "come and help me. The little fat one has the croup!"

"The croup? I'll telephone Dr. McLean—you call Hortense—" He paused. Margaret was smiling, a little superior, efficient smile.

"Nonsense," she said quietly. "Hortense doesn't know anything, and the others have gone out. Listen! Did you hear that?"

She was upstairs almost before he heard the hoarse brassy cough, and he followed her swiftly.

The little boys were in a huge bed, in a room far removed from Margaret's. Tom wondered vaguely how she had heard that cough, wondered as he carried out her orders, for she had taken full command.

"You might take the other one into the blue room," she began. "No use to wake him."

She was deftly arranging the pillows to prop the little fellow up, for he was gasping as though each breath would be his last.

"I'm putting a wet towel around his throat," she went on briskly. "Just look, Tom, how red his fat little face is! Can you find the ipecac? And a teaspoon?"

She was kneeling now, with one arm around the little chap.

"Poor baby!" she crooned. "We won't let him choke—poor baby!"

When Tom came back, with the ipecac, she was fastening an umbrella to the head of the bed.

"Half a spoonful, Tom," she said. "No—give to to me—here. You poor baby! We'll have to make him a croup tent, you know. That's what I'm doing. Hortense bring two sheets and my tea kettle. See, Tom, his face is perfectly purple! If the steam doesn't help him, maybe you'd better 'phone Dr. McLean. He used to give us some sort of stuff—we'd put two drops of it on some sugar, I think for little Alice," her voice broke, and then she went on bravely, "It used to help."

It was a long time before Dr. McLean arrived. Hortense, not quite so trim as usual, but looking triumphant and very happy, let him in. The great clock in the hall chimed twelve, so it was Christmas morning.

"How's Mrs. Lanier?" he asked, eagerly, as he shook himself out of his great coat. "And the little boy?"

"Mrs. Lanier is—how do you say it? she is alive again." Hortense chuckled.. "And we are to make no noise, for the petit garcon is sleeping. But see!"

She threw open the door.

Margaret Lanier, one finger warningly on her lips, hurried to meet him, and held out both her hands. Her cheeks were flushed and little damp tendrils of hair curled over her forehead and around her ears. Her eyes were soft and brooding.

"He's perfectly all right, now doctor," she whispered, leading him over to the bed. "I did—well—everything."

Old Dr. McLean looked from the sleeping baby to Tom Lanier, standing disheveled, but radiant, at the foot of the bed.

The doctor nodded his head wisely. "It was the right treatment," he said. "It worked!"

Margaret smiled, but Tom's eyes met his in a look of quick understanding.

"And he was so sick. I was afraid—just for a few minutes," she hesitated.

"That's when I 'phoned for you," finished her husband.

"Margaret Lanier, croup specialist," she laughed under her breath, and held out a hand to each man. "Let's go down to the library. I'm going to make you some coffee and sandwiches."

But at the door she dropped their hands and ran back to tuck in the covers once more.

As she poured the coffee she was very quiet, but her eyes had a misty, far-away look. All at once she sighed happily.

"Isn't he a dear!" she mused. Her lips curled in a whimsical smile. "The older one, David, you know, is much handsomer, but I'm sure I'll always love this rolly-poly baby a little the best."

### A GENTLEMAN

"He's a gentleman of the old school."

"That so?"

"Yes; whenever he calls for you in his car he doesn't sit at the wheel and honk his horn, but gets out and comes to the door and rings the bell."

## HOUSEHOLD QUERIES

### Recipes Requested

I am a subscriber of your paper and ask for some recipes. I wish you would publish recipes for lemon sponge pie, date pudding (as served by "The Elite" in Los Angeles, avocado cocktail, as served by Ambassador in Los Angeles), soft maple frosting for cakes, cranberry pie, coconut custard pie.—Subscriber, Los Angeles.

Lemon Sponge Pie—Dissolve package lemon Jell-O in pint boiling water. When cold and still liquid whip with Dover egg beater till of consistency of whipped cream. Keep mixture cold while whipping by setting bowl in cracked ice or very cold water. Pour mixture in cooked pastry shell. Add whipped cream or if liked a fruit whip made by whipping stiff one-half glass apple jelly with one egg white. Pile this on lemon sponge in pastry shell and slip into oven for quick browning. If you are careful you can brown the meringue under the broiler with very slight melting of the sponge underneath. Let stand to solidify again and serve cold.

Date Pudding—This is a very fine date pudding. We do not have the Elite recipe. One cup chopped dry dates, 1 cup chopped nuts, 1 cup sugar (scant), 3 eggs (well beaten), 1 teaspoon baking powder, 9 level tablespoons flour. Bake in shallow tins about 20 minutes in slow oven. Serve

> The wave is breaking on the shore,
> The echo fading from the chimes;
> Again the shadow moveth o'er
> The dial plate of time.
>
> —Whittier.

with whipped cream. Will serve about eight. The dates and nuts should be chopped fine but not ground.

Avocado Cocktail—Cut ripe avocados in quarter inch cubes, pour over sauce made of equal parts cocktail sauce (as prepared commercially) and sweet or slightly sour thick cream. Season as preferred with lemon juice, salt, pepper or tobasco sauce. Addition of walnut catsup or Worcestershire sauce is sometimes made.

Maple Frosting—One cup maple syrup, 1 egg white, ½ cup beaten cream, few grains salt. Boil syrup until it threads; pour on to the beaten white; add cream, salt, and beat until thick enough to spread.

Cranberry Pie—Line pie tin with crust. Fill with 2 cups cranberries, 1½ cups sugar, ¼ cup water, 1 tablespoon butter. Cover with upper crust or a lattice of paste strips. Where one prefers to make a filling mix 1¼ cups chopped cranberries, 1 cup chopped raisins, 1 cup sugar, ¼ cup water, 1 tablespoon butter. This is sometimes called mock cherry pie.

Coconut Custard Pie—Beat 3 whole eggs and 1 yolk until light, add ½ teaspoon salt and 2/3 cup sugar and beat again. Add 1 cup grated coconut and 2½ cups milk, mix all well together, turn into a deep pie plate lined with paste and bake until the custard is set. Beat the white of 1 egg until stiff, add 1 tablespoon sugar, beat well, spread on the top of the pie and brown in the oven to a delicate brown.

### Smoking Mutton

Is there some kind of a preparation that can be used to cure meat without smoking in regular smoke house? We can get a sheep occasionally but don't want to go to the expense of building a regular smoke house. I have heard of something that is called liquid smoke or something like that.—Subscriber, Escondido.

"Liquid smoke," "condensed smoke" are names for a preparation used with great satisfaction by many people. We quote from book of instructions published by E. H. Wright:

Few people realize how well they can use mutton in providing a meat supply for home use or market. Probably the reason for this is that they believe mutton must be consumed while still fresh. Naturally, when mutton is used like that it soon becomes tiresome. As a matter of fact, mutton can be preserved and cured like pork. The United States department of agriculture says: "More mutton would be consumed on the farm if farmers realized generally that cured and smoked mutton is as delicious as pork." In preparing farm slaughtered mutton, it should never be cured until it is thoroughly cooled, which, however, should be within 24 to 36 hours after it is killed. Neither should it be allowed to freeze before curing or during the process of curing.

Either the brine or dry method of curing can be satisfactorily used with mutton, the preference, if any, being for the dry method. This method, in detail, is as follows:

For each one hundred pounds of mutton, thoroughly mix one small bottle of ham pickle with ten pounds of salt. This will give the mutton a flavor of rare deliciousness.

Rub the mutton thoroughly with this mixture and pack it away in a tight wooden or stoneware container, with a layer of the mixture on the bottom, another layer placed between each layer of meat, and a final layer of the mixture on top, completely covering the meat. Allow it to cure, figuring one and a half days for every pound the pieces of meat average in weight.

After the curing is completed take the meat out and carefully brush off the salt. Hang it up for ten days in a clean, cool dry place.

At the end of this time, lay the meat out on a table and paint the upper side thoroughly with condensed smoke, applying it thickly with a brush and rubbing it in well, especially around the bones. After half an hour, turn the pieces over and repeat the process on the other side. Hang the meat up again and at the end of a week repeat the process. After hanging another week the meat is ready for use, with the same keeping qualities of pork, similarly treated.

### Rice Tea Cakes—Sour Cream Cookies

I would like to know if some of the subscribers would send in a recipe for cookies, the kind the Chinamen make. They are known as 'chink cookies and are very crisp. Would you please publish it for me? I am sending in a sour cream cooky recipe I think the neighbors on ranches would like. I like your household hints very much and look for them each week.—A New Subscriber, Fort Bragg.

(Perhaps these are the wafer thin cakes made of rice flour which the Japanese and Chinese serve with tea. Can any of our readers furnish directions for making?—Edit.)

Sour Cream Cookies—1½ cups butter, 3 cups sugar, 3 eggs, 1 large teaspoon soda dissolved in 1 cup sour cream, 1 teaspoon nutmeg, flour to roll. Don't roll thin. Sprinkle with sugar before baking.

### Pickling Ripe Olives

Will you please advise me in your columns the proper formula for curing and pickling ripe olives?—Subscriber, San Gabriel.

See Cultivator of December 2, pages 587 and 589, for complete directions.

### A CASE OF NECESSITY

Madge: Would you marry a man to reform him?

Mabel: I suppose I shall have to—there isn't one of them that suits me the way he is now.—(Boston Transcript.)

### Livestock Commission Merchants

### 219 Exchange Bldg., Union Stock Yards, Los Angeles

To Our Friends and Patrons:—

We are pleased to announce to our friends that we are in our new office, at the Union Stock Yards of Los Angeles, Cal., to look after the interests of all our patrons.

Many years of experience and a thorough knowledge of all angles of the Live Stock Business—especially producing, breeding, feeding and marketing—will enable us to secure to you the greatest possible cash return for your livestock.

We expect to furnish all our patrons a weekly market report; and will gladly furnish you a telegraphic report on your request, before each shipment. Kindly advise us just what you have to market and the approximate date you will be ready to market same.

Our sales organization will be headed by G. W. THOMAS, assisted by J. W. TAFT and J. F. WEAVER. Each of these men have had years of experience in the sales end of the livestock business.

When in Los Angeles drop into our offices, 219 Exchange Bldg., Union Stock Yards, for a chat, or make it your headquarters.

## New Year

The completion of the Los Angeles Union Stockyards thorou of one of the Pacific Coast's most important products, marks an in firms whose announcements appear here, extend cordial greetings to broad policy of fullest cooperation with the producer for the succe

LIVESTOCK

Weekly market summary, December 23 (Saturday) 1922, furnished by Federal-State Livestock Market News Service, 1028 Pacific Finance Building, Los Angeles.

Cattle: Receipts during the past week have been light but demands were also comparatively narrow and prices worked about 25 cents lower on beef steers and feeders. Good cows are fully steady. Strictly good steers have been scarce. The week's top was 8.25, paid Friday for 54 good Utah steers, averaging 1147 pounds. These cattle had been finished on beet pulp and hay. The 8.00 mark was reached Monday on 68 good Wyoming steers, averaging 1125 pounds. This price was duplicated Friday on a load of Jackson Hole, Wyoming, steers, averaging 1120 pounds. A string of 400 Nevada steers, averaging 1131 pounds, went at 7.85 Monday. Several shipments, mostly northern steers, ranged from 7.00 to 7.75. A few "tailings," sorted off from loads, went from 5.50 to 7.50, according to quality. Several lots of Arizona and New Mexico light steers ranged from 5.00 to 6.50, going to killers. Feeder orders took care of yearling and 2 year old Southwestern at 5.00 to 5.25. Good northern feeders sold up to 6.00 and 6.75.

Good beef cows ranged from 5.40 to 6.25, latter price being paid Monday for a load of Wyoming cows, averaging 1090 pounds. Canners and cutter cows cleared from 1.50 to 3.25. Bologna bulls ranged from 2.50 to 3.75.

Calves: The calf market has been uneven but the movement shows some improvement and prices have strengthened in some cases. Most of the arrivals have been from Arizona and New Mexico and of common to medium quality, selling slowly at 5.00 to 6.50 for the bulk. Average weights ran largely from 250 to 300 pounds, and over. A few good light calves sold up to 7.50 and better.

Hogs: Receipts at the yards and direct to packers this week were light and the market is firm. Good light hogs from Texas reached 9.60 and 9.70 Wednesday, with 465 pound packing sows at 6.00. There was good inquiry for

BABY CHICKS

Every Day—Ducklings, turkeys, hatching eggs—dogs, cats, birds, rabbits, pullets.

Write for prices

FANCIER'S EXCHANGE
640 So. Main St. Los Angeles

**For Sale**—For 18 years we have produced the best White Leghorn chicks. All the best blood of the world is represented in our flocks. Chicks grow into exceptional layers. Last season our customers had almost no death loss in their brooders. We delivered every order in full and on time. Send for new circular. We ship everywhere. Leghorns, Rocks and Reds $15.00 per 100. P. Cook Chick Ranch, 1717 Valley Blvd., Alhambra, Calif.

**Hoganized White Leghorn Baby Chicks**—The first of September we start on our 15th year hatching. Will have chicks every week until June. All our hatching eggs come from one flock of 5000 Hoganized hens. Mated to male birds raised from the best layers in the flock. Shipped by Parcel Post, guaranteed to arrive alive and strong. Lyon Hatchery, Gardena, California.

**Baby Chix Electric Hatched**—Booking orders for 1923 delivery. R. I. Reds, Barred Rocks. Our S. C. White Leghorns are from hens of George England strain mated to cockerels from the A-1 matings of the trap-nested stock of the Bonnie Brae Farm at Burbank. Write for price list. RED LOCK HATCHERY, 305 North Main Street, Artesia, Calif.

**The Parent Stock from Which we get our day old chicks, is selected for vitality and laying capacity.** We specialize in White Leghorns, but will furnish other desired breeds. Our capacity being limited by the necessity of carefully selecting only the best stock, orders should be sent in promptly. THE STEVENSON HATCHERY, Watsonville, Calif.

**Poultrymen Attention.** We are now booking orders for hatching eggs, baby chicks and 8 weeks old pullets, from our well selected and culled heavy laying utility stock. S. C. White Leghorns exclusively. Only a few more dates open for hatching eggs. All our cockerels are from trapnested stock. Pine Tree Poultry Farm, Los Gatos, Calif.

**For Sale—White Leghorn Cockerels,** hatched from high record Trapnested eggs, direct from J. A. Hanson, Corvallis, Oregon, the man who consistently wins at all egg laying contests. These are wonderful birds, hatched March, 1922. Price $10.00 each. Reference—Commercial T. & S. Bank, N. S. Kaime, Santa Barbara, California.

**Order Your Baby Chicks Early.** You will sure get plenty of eggs if your chicks come from Webb's Cackle Farm. Not a new one in the business but for 12 years Santa Cruz' largest breeder and hatcher of single comb White Leghorns. 2700 choice hens mated this season. Our stock is open for inspection at all times. 227 Parkway, Santa Cruz.

**For Sale—Pedigreed White Leghorn Cockerels**—Mother laid 252 eggs at Santa Cruz egg laying contest. Father's mother laid 306 eggs, grandmother, 312 eggs. The egg habit can not be fed into a hen, it must be bred in. California Poultry Farm, R 1, box 160, Modesto, California.

**Baby Chicks—From selected breeders.** Order now for 1923 delivery. White Leghorns, R. I. Reds, Barred Rocks. Safe arrival guaranteed. Write for circular and price list. The J. H. Stubbe Poultry Ranch and Hatchery, Box 67-E, Palo Alto, Calif.

**Baby Chicks of Seven Varieties.** Order now for early Spring delivery from Fresno headquarters. Rohrs & Anson, 2023 Belmont Avenue, Fresno, California.

**Watch Us Grow Quality Chicks.** Booking orders now for the season of 1923. Brown and White Leghorns, Barred Rocks, Rhode Island Reds and Anconas. Order early. Ohlen's Hatchery, Campbell, California.

**White Leghorn Baby Chix for summer** and fall months from stock Accredited by Sonoma County Farm Bureau. We guarantee safe arrival. Write for prices and literature. The Pioneer Hatchery, 409 Sixth Street, Petaluma, California.

**Santa Cruz Chicks** from my heavy laying strain of White Leghorns that are hatched right and prices are right; 12 years experience at hatching and breeding in Santa Cruz, Calif. T. E. Blake, Oak Knoll Poultry Ranch.

**S. C. White Leghorn Baby Chix** from our own bred-to-lay stock. Our prices are right. Model Poultry Farm, W. C. Smith, Prop., Corning, Cal. Established 1904.

**Buff Leghorn Breeding Stock,** baby chix, hatching eggs for sale. Exhibition and utility. F. W. Hauserman, Modesto, California.

**Black Leghorn, Buff Minorcas, Dark and** Red, Laced, Cornish. Reasonable. F. S. Dashiell, R. 1, Box 179, Santa Rosa, California.

**Slighty Used 540 Egg Size Incubators**—Complete in every way. Liberal terms. Fanciers' Exchange, 640 So. Main, Los Angeles.

## POULTRY

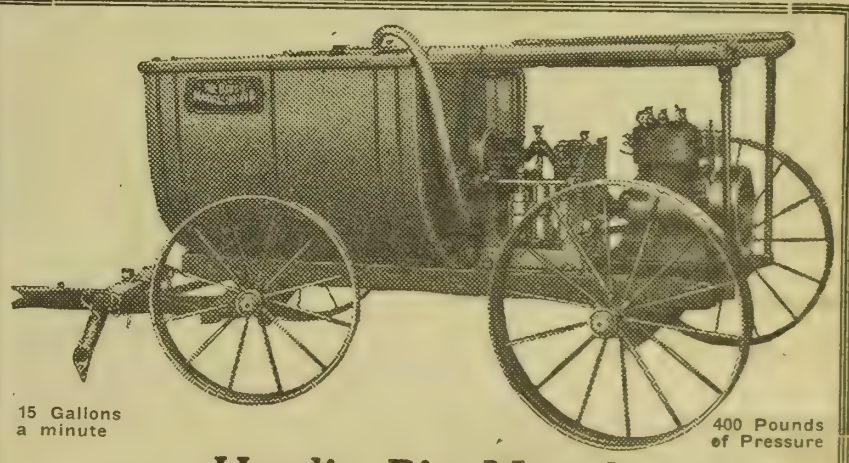
## PRESS THE BUTTON HYDRO DOES IT

It may be a lazy man's way, but the electric habit is coming. It's nice to press the button and let George do it. It hasn't exactly been in the farmer's province to press the button and have a valet appear to manicure the cows. However, it is possible to secure great benefits and real helpfulness on the farm through electric installation.

Electricity has played a highly important part on transforming California from a desert waste to the highly productive state it has now attained. The illustration herewith shows one of the most modern types of vertical motor and pump with "push button" or "remote control." The push button is in the box. This can be installed anywhere on the farm with only small additional expense. Then push the button and electricity does the work.



Hardie Big Mogul

Big enough for the largest acreage—strong enough for the highest pressure—light enough for the steepest hillside—meets the demands of the biggest growers—handles as easily as the smallest outfit—turns in a 20 foot circle—Measured by any standard, the greatest sprayer value ever offered.

Light Strong Long-Lived

The Mogul Pump is made over-size and extra strong to carry the highest pressure ever required in spraying. It has a built-in pressure regulator, a reliable 8 h. p., two cylinder Cushman Engine that runs like a watch without vibration. It is very light, weighing, the complete sprayer, only 2000 pounds with a 15 gallon a minute pump and 300 gallon tank. The truck is an all steel Autoplex with high, broad wheels for light traction and underslung to carry the load low.

Get our catalogue of the complete Hardie Line.
There is a Hardie for every Spraying Need.

# Inyo County Calf Clubs

A shipment of 14 registered heifer calves arrived at Bishop, Inyo County, December 9, from the Sacramento Valley, these calves to become the nucleus of Inyo County calf clubs. Five were Holstein heifers from the James MacGillivray herd at Sacramento. They were from nine to 13 months of age. Two were Ayrshires from the Clyde LeBarron herd at Valley Ford, in Sonoma County. The LeBarron herd is one of the foremost herds of Ayrshire catttle in the West. Four Shorthorn heifers were obtained from the T. S. Glide herd at Davis and the H. M. Elberg herd at Woodland. Three Milking Shorthorn heifers were in the lot, from the Alexander and Kellogg herd at Davis.

These calves were distributed among George Linscott, Laws; Henry Gibson, Bishop; John Christian, Bishop; Robert Christian, Bishop; Harold Benner, Big Pine; Earl Compton, Bishop; Francis Hines, Big Pine; Ed Blake, Big Pine; Bruce Albright, Bishop; Archie Albright, Bishop; Elma Wonacott, Bishop; Orville Krehbiel, Bishop; Richard Ehlen, Laws.

Several boys in the county purchased calves locally. Ernest and Timothy Linscott and Robert Gillespie bought Holstein heifers, and Willie Alpers purchased an excellent heifer calf from the George Watterson herd. A total of ten boys are starting out in the dairy calf club, and seven in the beef calf club.

There has been a great deal of enthusiasm among the boys in this calf club work. The boys were helped financially by the Inyo County Bank. W. R. Ralston, assistant state club leader, Charles Reeves, county physical instructor, and J. P. Hertel, county agent, have been instrumental in helping the clubs to get a start, and to make the thing more worthwhile the Inyo Creamery has put up a prize of $100 for the dairy calf club, and the Inyo County Bank has donated $75 for the beef calf club.

No doubt these clubs will be instrumental in developing not only an appreciation for better livestock in Inyo County, but in educating these younger fellows in the care, management and financing of better livestock.

# Successful Pig Club Contest

A successful pig feeding contest has recently been concluded in Los Angeles County. In this contest there were 39 pigs, weighing at the beginning of the contest an average of 45 pounds. At the close of the contest these pigs averaged 138 pounds each, representing a gain of 93 pounds per pig, or a total of 3,630 pounds for the 39 pigs. This represents an average daily gain of 1.05 pounds per head.

Mr. Ernst, Los Angeles County Club leader, makes a statement that this gain was put on at a profit. After all the expenses were deducted, including the original cost of the pigs, cost of feed, labor and miscellaneous expenses, the balance showed a net profit of $114.77, or an average of $2.94 per pig.

Where good feeding methods were used economical gains were obtained. in a few cases there were losses sustained, this being due to a lack of green feed or careless feeding and management. The best results were obtained by the feeding of rolled barley, supplemented by a nitrogenous concentrate, either skimmed milk or tankage. Where tankage was fed, it was fed in the proportion of 9 parts barley and one part tankage, by weight. In addition, green alfalfa, either as pasture or cut and thrown to the hogs, provided succulent feed. In most instances the hogs were used to clean up waste products of the farm, thus getting rid of waste and at the same time helping to provide a profit.

Some of the interesting results of this contest are as follows: The 29 boys who took part in the contest demonstrated that pork can be raised at a profit in southern California, the average cost of gains for the 39 pigs being 6½ cents per pound. The keeping of accurate records, the effort required to take care of these pigs, provided a means of educating these boys in taking care of livestock and furnished business experience as well. Mr. Ernst concludes that these hogs were produced economically in an intensive agricultural community.

# Chloroform Treatment for Lung Worms in Cattle

Lung worm infestations in cattle and sheep cause rather extensive losses among livestock. Sheep and cattle kept on low marshy ground are very likely to contract this trouble. The affected animals generally show gradual loss of flesh accompanied by progressive weakness and a slight cough which may at times develop into paroxyms of coughing, generally expelling some of the threadlike parasites and their eggs. If this material expelled lodges on feed consumed by animals not yet affected, they may acquire the disease. In severe outbreaks large numbers may die.

Various forms of medication have been suggested for destroying lung worms. The delicate nature of the lung tissue precludes the use of strong active agents, hence in the past the disease was looked upon as incurable. More recently, however, the use of chloroform by inhalation has been tried on a large number of cattle and sheep, and under certain conditions has proved a very good remedy for destroying the worms in the lungs without injuring the animals treated. Sheep are rather sensitive to the action of chloroform but cattle apparently are not injured and when mildly affected often are freed from the trouble after one or two treatments, provided they are otherwise given the proper care and attention.

The chloroform method was used on the Del Monte Cattle Ranch about a year ago. A communication from Carlton Earle Miller, owner and manager, states: "We accomplished a complete cure at the ranch with the chloroform treatment. All the cattle became fat and were sold for a good price. The chloroform treatment as outlined by you was 100 per cent perfect." The Del Monte Ranch had at the time of treatment about 2,000 head of cattle and had lost approximately 500 head before calling on the department of agriculture for advice. Information as to the use of chloroform for lung worm infestation may be secured from the Division of Animal Industry of the California Department of Agriculture, Sacramento.—J. G. Jackley.

### ACCURATE BUTTER FAT TESTS

Wherever milk and cream are paid for on the basis of the butter fat content, the use of accurate glassware in making the test is most important to the dairyman. Since 1900 milk dealers and farmers in New York have been protected by law against faulty Babcock glassware. All jobbers and manufacturers of glassware are required to submit their goods to the New York agricultural experiment station for examination before they are offered for sale. All glassware meeting the requirements is branded S. B., or State Branded, by the station officials and is then ready for market.

The station authorities have felt for some time that butter fat tests in New York state could be made still more accurate if further legal restrictions were placed on the number of kinds of bottles and pipettes that may be legally used in making these tests. During 1921 the experiment station tested more than 39,000 pieces of Babcock glassware representing more than 24 distinct types. Many of these

LISLE MFG. COMPANY
Box 716 Clarinda, Iowa

bottles and pipettes although accurately made, were so constructed as to lead to errors in butter fat tests when used by the average person.

By an amendment of the agricultural law passed at the last session of the legislature only five types of glassware can now be legally used in making butter fat tests in New York. These include the usual 8 per cent milk bottle, the 9 gram short and long cream bottles, the 18 gram long cream bottle, and the plain 17.6 centimeter pipette. The present law now complies with the provisions for Babcock glassware as set forth by the United States bureau of standards.

## COW TESTING ASSOCIATIONS PROVE PROFITABLE

From the office of Noel Negley, extension specialist in dairying, comes report of the cow testing work of the 28 cow testing associations in this state. It has been noted that generally the associations which were first organized are showing best averages. This association has resulted in weeding out the unfit and, so far as possible, replacing with high producers.

From the November reports we find that better use is being made of cow testing association work. Thirteen associations report 185 unprofitable cows sold. L. H. Meads of the Patterson Association in Stanislaus County reports 76 unprofitable cows sold, and Ferndale No. 3 reports 30 sold. Testers are not neglecting the importance of urging their members to use good purebred bulls as 21 have been purchased during the past month. However, there is still plenty of work to be done for 11 associations reporting on the subject state that 61 grade or scrub bulls are in use.

Following is a summary of the November reports:

| Assoc. | Cows Tested | 40 pound Cows | High Herd Owner | Pounds Milk | Pounds Fat |
|---|---|---|---|---|---|
| Arcata | 1630 | 100 | Albert A. Otto | 516 | 40.8 |

**One of the Laboratories in the Dairy Industry Building on the University Farm at Davis**

California has been exceedingly generous in providing the new Dairy Industry Building and equipment which has just been completed. The construction of the new building is the culmination of five years planning, which included a study of all important dairy industry buildings in this country. In this building will be held four short courses in dairy manufacturing, February 5-15. It is an opportunity which should be taken advantage of by every one engaged in dairy manufacturing. There will be courses for milk plant operators, butter makers, cheese makers, and ice cream makers. The equipment in the dairy manufacturing building is all electric. The entire building is electrically equipped.

## BIG TYPE HOGS FAVORITES

There is no "best" breed of swine, but within the different breeds the "big type" hog is now finding most favor in nearly all parts of the country, says the United States department of agriculture in a recent Farmers' Bulletin, 1263, Breeds of Swine, by E. Z. Russell. The bulletin, which is well illustrated with photographs of specimens of all the leading breeds and of some minor ones, gives a brief history of the origin of all the breeds now found in the United States, descriptions of the characteristics and names of the record associations, with names and addresses of the secretaries.

The usual classification under lard and bacon types is given. The breeds included under the first are the Duroc-Jersey, Poland China, Chester White, Berkshire, Hampshire, and Spotted Poland China. The Tamworth and the Yorkshire are the only breeds of the bacon type grown to any extent in this country and are the only ones included. The minor breeds given a place in the bulletin are the Mule-Foot, Large Black, Kentucky Red Berkshire, Cheshire, Essex and Victoria.

The big type animals are found in all breeds, but are more numerous in some breeds than in others. Owing to an increasing demand for cured hams and bacon of high quality the type of hog becomes a matter of much importance. Hams weighing from 12 to 16 pounds are more likely to cure with high quality and flavor than lighter or heavier pieces. Neither hams nor bacon should carry excessive quantities of fat but should be "well marbled." The opportunity for producing meat of this character is greater in the quickly grown big type hog than in the distinctly small type. The most profitable hog is the one that can be grown to the required market weight in the shortest time. Well bred and well fed animals of the right type will make the market weight in from seven to ten months. The best market weight is generally from 175 to 225 pounds.

Copies of the bulletin may be obtained free by addressing Department of Agriculture, Washington, D. C.

## PROFIT FROM STUDY OF FEEDS

How to feed economically and profitably is an important thing for a dairyman to know. In all sections of the country where investigations have been carried on the United States department of agriculture has found that feed is the most expensive item of cost of milk, and intelligent feeding offers the biggest opportunity to reduce costs.

The analysis of many figures by the department shows that in Vermont the winter costs of keeping a herd were made up of 63.1 per cent feed and bedding, 17.5 per cent labor, and 19.4 per cent other costs. In summer feed and bedding represented 41.6 per cent of the total expense, labor 26.7 per cent, and other costs 31.7 per cent.

In the south the costs are distributed somewhat differently. Figures obtained in Louisiana show that in winter 56 per cent of the expense is for feed and bedding, 22.4 per cent for labor, and 21.6 per cent other costs. The summer costs in that region do not differ from the winter costs so much as they do in the north. The figures for summer in Louisiana show that 50.5 per cent of the total cost of milk is for feed and bedding, 26.2 per cent for labor, and 23.3 per cent for other costs.

Although it is advisable for a farmer to economize wherever he can do so wisely, these figures show that the dairyman who studies feeds and feeding has a big opportunity to increase his profits.

## OVER 3000 TESTED

The November cow testing report of the Stanislaus County farm bureau dairy department shows 3008 cows tested. The ten high cows were owned by: J. Chapman, Dairyland, Holstein, 84.0 pounds fat; Guy Miller, Ada, Jersey, 78.9 pounds fat; Six Bros. Dairy, Fern, Holstein, 75.9 pounds fat; J. Pelanda, Sissy C. V., Holstein, 71.0 pounds fat; J. Driver & Son, Nigger, Grade Holstein, 67.8 pounds fat; J. Chapman, Maria, Holstein, 67.2 pounds fat; Six Bros. Dairy, Walhalla, Holstein, 66.4 pounds fat; F. L. Hogue Co., Daisy, Holstein, 66.4 pounds fat; J. Gulart, 66, grade Holstein, 64.1 pounds fat; L. Hadley, Mate, grade Jersey, 66.2 pounds fat.

Fairchild's News Service through the National Wool Growers' Association: "As end of the year approaches there is considerable speculation here as to how much unsold wool there is in Boston market. General opinion is that supply is exceptionally low. Many of the larger houses reporting their stock of domestic wools smallest in years. Market remains quiet with prices of high grade wool slightly softer. Quotations: fine medium staple, $1.40; three-eighths blood staple to $1.10; fine medium clothing, $1.15; scoured basis.

On Saturday, December 9, the Northern California Wool Growers Association held the largest meeting in the history of the organization, although there was a driving rain and snow. Over 70 sheepmen representing Glenn and Tehama Counties turned out for the meeting. Seven representatives of the Southern Pacific and two representatives of the state department of agriculture and U. S. biological survey were on hand to discuss shipping of livestock, railroad land rentals, corral accommodations and the control of the coyote.

J. D. Story, public service commissioner of Queensland, Australia, is in the Pacific Coast states gathering information to assist farmers of Australia in marketing and kindred problems, especially of the dairy industry.

Following a visit of an expert to America, during which methods of the California Dairy Council were studied, British dairymen are planning a "Milk Publicity Campaign," with the expenditure of nearly $1,500,000.

The sheepmen of Tehama County have decided to adopt the federal method of exterminating the coyote and will interview their board of supervisors at once.

Fifty-two head of registered Herefords sold at the International sale for a total of $43,576—an average price of $838 a head. Twenty-four bulls averaged $1,100 each and 28 cows aver-

# OIL LIGHT BEATS ELECTRIC OR GAS

## BURNS 94% AIR

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. V. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

# You Should Not Buy a Bull Unless:

You have seen his dam and know that she is the type you want his daughters to be.
Or you have seen a good picture of her with a close-up picture of her udder.
She is a big producer of milk with a high percentage of fat.
Our cows are the tops of all the big sales in the state for the past three years.
Practically all of them have high 7 day and yearly records. They hold 4 world's records.
Our herd bull is Aaggie De Kol Mead, whose five nearest dams average 1130.64 pounds of butter in a year testing over 4%.
You should have one of his sons out of a high record dam.
Call or write for our long-time, easy payment plan.

Persimmons: Lb., 10@12; poorer, 7@8.

Pomegranates: Lb., 6@8; few large, 9.

### CITRUS FRUIT

Grapefruit: Arizonas: 64-96 sizes, seedless, 4.50@5.00 per box. Imperial Valley, special brands, 4.50@6.00 per box. Northern, 3.00@3.25 per box.

Lemons: Special brands, fancy 7.50@8.50; choice, 6.00@7.00 box; market pack, 3.50

Oranges: Northerns: Special brands, Navels, 3.50@4.50 per box, market pack, 3.25@3.50 per box. Tangerines, Arizonas, 9@10 lb.

### BEANS

California Lima Bean Growers Association estimates regular Limas remaining in California by January 1, 1923, 420,000 bags, from which seed must be deducted. Prices quoted Dec. 10:

| | |
|---|---|
| Limas | 8.50 |
| Baby Limas | 10.50 |

### HAY

Following are prices in the general market to growers f. o. b. Los Angeles in carload lots; handling and commission must be added to obtain retail prices on new hay:

A slightly weakened condition obtains because of increased receipts, but it is thought to be only temporary.

| | |
|---|---|
| Tame Oat | 22.00@24.00 |
| Barley Hay | 16.00@18.00 |
| Rabbit Alfalfa | 24.00@26.00 |
| No. 1 Dairy | 22.00@24.00 |
| Standard Alfalfa | 16.00@18.00 |
| Wheat Straw | 10.00@12.00 |
| Barley Straw | 9.00@11.00 |

Prices for alfalfa being received by growers on the ranch vary greatly. As approximate figures we may say that Rabbit Alfalfa is bringing the growers around 25.00@27.00 as a fair average. No. 1 dairy is varying from 15.00@18.00 with 16 as a mean or average price. Standard, 10.00@12.00.

### GRAIN

Prices L. A. Grain Exchange, December 26:

Milo, 100 ton lots, January del., 1.90.
Barley, 100 ton lots, January del., 1.65.
reports December 26:

Market conditions about as follows:

Wheat: Milling, 2.40@2.45, sackage deductible; seed, 2.20@2.30 according to quality.

Barley: Stronger, 1.67½@1.70.

Corn: Excess supply makes local prices lower than shipping prices, 1.72½@1.75 bulk.

Milo: Slightly weaker. Ordinarily the season begins early in the fall; this year it began earlier, and the market will be much stronger, presumably, in January.

# San Francisco Markets

San Francisco, December 26, 1922.

### BUTTER

Sales on Dairy Exchange:

Following quotations carry a jobber-to-jobber discount of 10 per cent, plus a seller's handling charge of 2 per cent of net invoice:

| | |
|---|---|
| Extras (Dec. 27) | 53½ |
| Firsts (Dec. 27) | 53 |

### CHEESE

Dairy Exchange quotations:

| | |
|---|---|
| California Flats (Dec. 27) | 24½ |
| Cal. Y. A. fy (Dec. 27) | 28½ |

### EGGS

Dairy Exchange Quotations:

| | |
|---|---|
| California Extras (Dec. 27) | 58 |
| Extra Pullets (Dec. 27) | 53 |
| Undersized (Dec. 27) | 47½ |

### POULTRY

Sales to Retailers: Below are listed averages of actual prices obtained between 7:30 and 9 o'clock the morning of December 26, by San Francisco jobbers from their sales to retailer, hotels, restaurants, cafeterias, etc. Slight fluctuations may be noted during the day's trading.

Broilers: 1 to 1¼ lbs., 33@35 per lb.; 1½ to 1¾ lbs., 30@32 lb. Colored, 25@27 per lb.

Fryers: Leghorn, 2 lbs., 25@28 per lb. Colored, 2 to 3¼ lbs., 25@27 per lb.

Young Roosters: Colored 3½ lbs. and up, 21@27 per lb. Staggy, showing spurs, 21@23 per lb.

Old Roosters: Colored, 17@18 per lb. Leghorn: 14@15 per lb.

Leghorn Hens: 2½ to 3 lbs., 18@28 per lb.

Large Colored Hens: 26@28 per lb. Off stock 23@25 per lb.

Ducks: Young, 18@20 per lb. Off stock, 15@18 per lb.

Geese: Young, 20@25 per lb., according to quality.

Live Turkeys: 30@34 per lb.

Dressed Turkeys: 33@38 per lb.

Belgian Hare: Live, 15@18 per lb.

Jack Rabbits: 2@2.50 per doz.

Squabs: Common, 2.00@3.50 per doz.

### LIVESTOCK

In reviewing conditions governing the local livestock market during the past week the Federal-State Livestock Market News Service says:

Cattle prices, per cwt. (delivered off cars from San Francisco)—Beef steers, good grades, 7.75@8; medium grade, 7@7.50; common grade, 6@6.75; beef cows, good grade, 5.75@6; medium grade, 5.25@5.50; common grade, 4@5; canners and cutters, 2@3.50; bologna bulls, 3.00@4.50.

Calves: 150 to 200 pounds, good and choice, 7.50@7.75; 200 to 250 pounds. 7.25@7.50; 250 to 300 pounds, good and choice, 6.75@7.25; over 300 pounds, 5.50@6.50.

Hogs: Good and choice grain fed Californias, 150 to 200 pounds, 9.75@10.00; 200 to 250 pounds, 9.00@9.50; 250 to 300 pounds, 8.00@8.50; over 300 pounds, 7.00@7.50; smooth sows, 250 to 300 pounds, 6.50@7.00; rough sows, 250 to 300 pounds, 5.50@6.00; over 300 pounds, 4.50@5.50.

Sheep and Lambs—Lambs, good and choice grades, 13.50@14; medium grades, 13@13.50; ewes, medium and good, 5.50@6.50; wethers, medium and good, 8.50@10.

Sacked Vegetables: Carrots, 1.00@1.25; turnips, 1.00@1.75; beets. 1.00@1.25; pumpkin and squash, 1.25@1.50.

Spinach: 3@5.

Squash: Summer, 1.25@1.75 L. A. lug.

### FRESH FRUIT

Prices furnished by state department of agriculture, division of markets:

Sales to Retailers: Below are listed averages of actual prices obtained between 7:30 and 9 o'clock, December 26, by wholesalers from their sales to retailers, hotels, restaurants, cafeterias, etc. Terms: Cash on walk. Slight fluctuations may be noted during the day's trading, while higher prices are sometimes obtained where credit is given or goods are delivered.

Avocados: Doz., 1.50.

Grapes: Cr., 1.00@1.65.

Pears: Bx., 1.00@2.75.

Persimmons: 75@1.25 flat cr.

Quinces: 75@1.50 box.

### CITRUS FRUIT

Grapefruit: Southern California, 2.00@3.00; Arizona, 4.00@5.00 box; Imp., 6.00.

Lemons: Special pack, 6.00@6.50 box. Choice, 5.00@6.00. Lemonettes, 2@4.00 box

Oranges: Navels, 3.50@4.50 box; Tanger-Navels, 3.50@4.50 box; Tangerines, 2.00 ines, 3.50@4.00 lug.

### BEANS

Shipping prices for 100 pounds. Quotations from California Bean Growers' Association, C. R. C., 1922 beans:

Large whites, 6.25; small whites, 6.35; pinks, 6.40; Mexican reds, 5.70; red kidneys, 7.50; Henderson Bush, 10.00; cranberry, 7.75; bayos, 7.40; blackeye, 5.00.

### HAY AND FEEDSTUFF

Under date of December 23, A. W. Scott Co says:

Receipts past week 1402 compared with 1101 previous week. Local market weak and lower. Receipts heavier than could be comortably handled. Export and coast shipments have been steady. Interior trading light and scattered. Alfalfa continues quiet and depressed. Prospect of weaker market in Nevada. Pasture conditions are excellent and have a tendency to depress demand.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the market in San Francisco (for prices to consumers, charges for switching, cartage, commission and handling expenses must be added according to conditions.) Transportation bad, scarcity and high prices for spot.

# Citrus Markets

Los Angeles, December 27, 1922.

The opening of the new season finds the market in a rather unsatisfactory condition. In its comment on the situation the Fruit World finds that "Experience of the past year throughout the nation indicates limited buying power in many parts of the country. Sales are made freely when prices are kept down. But sales resistance becomes almost insurmountable when prices are advanced in the present situation. Many of the financial industrial factors indicate business prosperity, but attempts in all lines to speed up business and raise prices have been brought to a halt by the lack of buying power. The trouble nationally lies in the wide disparity between prices of different commodities and especially between those prices the agriculturalist has been getting for what he sells and pays for what he buys or consumes. This is a severe brake on trade generally. It means a lack of buying power on the part of about half of the people."

At the present moment some holdover holiday fruit is being rapidly unloaded but usually at rather low prices. Florida's shipments are largely in excess of last year at same date. These shipments will continue heavy during the entire season.

Lemons are going forward in limited quantity and are being quickly sold around prices equivalent to 4.00 to 6.00 f. o. b. California.

### Shipments

Shipments of citrus fruit to date since November 1, 1922:

Southern California: Oranges 1171 cars; lemons, 588; total 1759. To same date last season, oranges, 1126; lemons, 801; total, 1927.

Central California: Oranges, 3537; lemons, 70; total, 36607. To same date last season, oranges, 3804; lemons, 27; total, 3831.

Northern California: Oranges, 266; lemons, 20; total, 286. To same date last season, oranges, 343; lemons, 3; total, 346.

# Snappy Notes on Livestock

**By A. L. Spellmeyer**

Christmas and the holidays always affect cattle markets. Beef showed strength for quality when packers paid 8.25 last week for some 1120 pound beet pulp steers and 7.90 for some light but well finished steers. Cows and heifers showed advancing strength with prices 5.50 to 6.25. Calves seem draggy though fresh lots will be in demand shortly. There has been a big demand for light feeder pigs around nine cents, few were in, but they are now coming. There is a demand for good grade weanling steers 400 average up from 5.00 to 5.50 and quality might bring more. Half of the cause of uneven prices on some lots of feeder steers is because they cannot be secured in three to six car lots as the California men want them. Again the California demand is for quality cattle. They see what top beef brings as compared to ordinary and want to reach that grade instead of common. Cows were scarce of common kind last week, but some are coming in now around the five cent mark fat enough to kill.

There is increasing demand for feeder and young grass cattle and feeder hogs throughout California, but the local stockmen don't realize on these markets; it's quick cash business, and when they see something it's too late to go back and talk it over with their bank, or that a buying order must be accompanied by instruction from their local bank, as irrespective of parties the demand of government direction of stockyards makes imperative the full and thorough protection of producers on a cash basis at markets.

No increase is noted on common twos feeder steers or common yearlings as they hang around the 5 to 5.25 prices, though a quality feeder brings more. Everywhere in California there is a call for cattle and yet small lots drag cheaper than they can be bought on ranges in these ordinary Arizona cattle. Some cracking good registered bulls and heif-

rs are being offered generally to California at prices from 100 to 150 per head.

The meeting of the American National Livestock Association is scheduled to take place in Los Angeles January 30-31. Carry the word, for this will be one of the greatest meets of cattlemen ever held in this U. S. A. Arrange to come. Let's get the California problems threshed out on a national basis. Around the stockyards things are gradually shaping up, and it is now reported the bus line will start from 26th and Santa Fe, New Year's week. Most of the commission men have already secured and filed their $15,000 bonds in addition to the $5000 stockyards bond. This, together with the market sales accounts ordered by the government, fully protect producer consignments.

E. W. Baker is here from Washington, taking over the market reports temporarily until a permanent man arrives to replace Nelson R. Crow who resigned recently. Mr. Baker is one of the crack market men of the department of agriculture, and has a wide reputation along that line.

Another producer protection offered by private parties is the arrangement to pasture cattle up to 500 head within 30 miles and 75 cents per head railroad rate from Los Angeles. The pasture offered is fine green, well watered and fenced, with bur clover and alfileria in low frostless browse hills, with unloading near. The rate is from 6 cents to 10 cents per day for fattening green feed, with all stray loss guaranteed. No doubt other places will follow the lead of these parties who figure to handle cattle towards yards or from yards. California generally is a garden now.—A. L. Spellmeyer.

# Use These Formulas When You Spray

## Orchard Brand

B. T. S. (dry barium sulphur) 40-50 lbs.
Bordeaux Paste 36-40 lbs.
Bordeaux Powder 18-20 lbs.
} 200 gal. tank

This is the right spray for the full control of California Peach Blight and Brown Rot. Now is the time to use it. If scale insects are present, or if more sticking quality or penetration is desired, add Miscible Oil and Glue to the above formula as outlined in our Deciduous Bulletin.

## Universal Brand

Dorman Soluble Oil, 12-15 gals.
Crude Oil Emulsion, 20-25 gals.
(If scale insects alone are present)

**Your Vineyards Need a General Cleanup**

**Spray With One of the Above Formulas**

## For Citrus Pests

Use

| Winter | | | Summer | |
|---|---|---|---|---|
| 25 .. lbs. | | B. T. S. | 15 | lbs. |
| 2½ gals. | | TRIUMPH | 1½ | gals. |
| | | and | | |
| 1 | lb. | GLUE | 1 | lb. |
| | | or | | |
| | | LIME SULPHUR | | |
| 10 | gals. | TRIUMPH | 4 | gals. |
| 2½ | gals. | | 1½ | gals. |
| | | and | | |
| 1 | lb. | GLUE | 1 | lb. |

These formulas have killed more scale, more thrips and have helped produce more fancy oranges and dark green healthy trees than all other control measures put together in Tulare County.

### AGRICULTURAL LEGISLATIVE COMMITTEE BUSY

When the agricultural legislative committee presented its recommendations for appropriations for the state institutions that have to do with agriculture, it told Governor-elect Richardson that while it had pruned the budgets as closely as possible in conformance to his announced economy policy, increases would be necessary for the interest of agriculture in California. Accordingly, the recommendations for the college of agriculture of the University of California provide for increased appropriations of $675,000 for the next biennium; and for the department of agriculture, $126,049.

Many economies are suggested in the state department of agriculture. The divisions of insecticide control, and of weights and measures, for instance, the committee believes should be made self supporting through fees. The viticultural division, upon the advice of grape growers, is eliminated in the recommendations and its work transferred to the college and the California Cooperative crop reporting service.

The greatest increase recommended is for plant quarantine work which the agricultural legislative committee believes is vitally important to the fruit industry of the state. For this work the committee recommends appropriations of $234,310 for the biennium, an increase of $125,430 over the present appropriation. An increase of $5,140 is recommended in the plant pest control work; but the appropriation for this includes $62,000 for biological control which the committee advises be transferred to the college of agriculture as it is of a research nature.

In the college of agriculture the increases recommended include one item of $375,000 for capital expenditures, such as buildings, equipment, etc. The other increases are these: poultry, $17,000 for an investigation of the deterioration of the quality of eggs and of food elements in poultry nutrition; $33,000 for work in agronomy; $62,500 for dairying; $89,000 for work on deciduous fruits, viticulture and vegetables; $8,000 for goat and bee investigations; $44,200 for work in subtropical fruits; $58,000 for livestock work; $52,000 for agricultural extension; and $11,500 for miscellaneous work.

The agricultural legislative committee, which is composed of 31 commodity organizations in California, with 60,000 producers as members, will follow its recommendations with an active campaign in the legislature to secure their adoption. Two years ago the committee was successful in winning every fight of any importance that it undertook.

In addition to the work on appropriations, the committee will watch every bill introduced, and through its secretary, R. N. Wilson, will closely scan those pertaining to agriculture. A digest of their provisions will be made and forwarded to the groups whose interests are affected by the measures. In this way they will have an opportunity to oppose or support the bills in the legislature as their interests are threatened or benefited.

The North Dakata Federation of Wool Growers Associations reports the sale of its entire pool at prices which will net the consignor 35 cents per pound. President J. A. Power says that growers are now signing a three-year agreement.

# Arrowhead Chicks

By Jean A. Koethen

CLOSE up against the foot of the San Bernardino Mountains and right in the shadow of the Arrowhead, looking out on a view that includes the city and valley of San Bernardino is a 5000 hen ranch that is both complete and up-to-date. When Mr. and Mrs. Butler L. Pierce bought their ten acres on this beautiful slope they planned for a combination fruit and poultry ranch, and the combination has been an unqualified success. The growing pullets have the run of the orange grove and store up strength and vigor for the strain of production while the fertilizer produced by 5000 hens and twice as many chicks is a wonderful help to the grove.

The long houses on Mr. Pierce's ranch are divided into sections 18 by 18. Ten of these 18 foot sections are changed at the beginning of the hatching season to brooder houses, and here, when I visited the ranch in March, 5000 chicks were being brooded.

**Profitable Producers**

Flock of layers at Pierce Ranch, just below Arrowhead. Note the sections equipped for brooding at right end of long house.

### Quick Transformation

It is only a couple of days work for Mr. Pierce and his man to change ten laying houses into brooder houses. Roosts and droppings boards are removed, temporary partitions put in, air shafts built on opposite sides of each room, canvas or wooden shutters fastened over the open front, the big Kresky stove put up in the middle of the brooding room, slatted roosts arranged in the playroom, the floor covered with clean sand and scratching material, and the thing is done. Two rooms are allotted to each 1000 chicks, the brooder room and an unheated room adjoining. The brooder room has no exit into the outside run. In order to get out of doors the chicks must go through the playroom. At the right of the picture may be seen the portion of the house used for chicks, with its separate yard and low door in every other room.

### Starting the Chicks

When the chicks are first placed in the brooder room the corners are wired off with two inch mesh if necessary. It is not always necessary but when a thousand chicks are brooded around one stove there is always danger that some will wander away and pile up in the corners.

The heat is started at 80 degrees and gradually reduced to 68 degrees at the end of three weeks. The first meal, given when the chicks are about 72 hours old, consists of commercial chick feed. This is fed on small, new pie plates, and the chicks have no other feed for four or five days.

After five days a mixture of mash and chick scratch is fed for a day or two, and then the chicks go onto a regular schedule of three feeds of scratch and two of mash daily. The mash is mixed on the place and consists of 100 pounds corn meal, 80 pounds coarse red bran, 40 pounds shorts, 10 per cent bone meal and 5 per cent charcoal. No beef scrap is given till the chicks are six weeks of age.

Until the end of the sixth week the grain given is commercial chick scratch. A gradual change is then effected to an equal mixture of cracked corn, cracked wheat and hulled barley. When this mixture has been fed for a short time the mixture is gradually changed, or, to use Mr. Pierce's expression, "tapered off" to cracked corn and whole wheat, the barley being eliminated.

The regular feeding schedule after the first nine or ten days is as follows: Early morning, scratch grain left over from previous night. 9 a. m. mash in troughs, what the chicks will clean up in a half hour. 12 o'clock, scratch in litter. 2 p. m., mash. 4 or 4:30 p. m., scratch for night and morning.

As soon as pullets are separated from cockerels they are given the run of the orchard, and it is this unlimited free range which is responsible, Mr. and Mrs. Pierce believe, for the splendid production and vitality of their hens. Seven hundred and thirty hens were laying in March an average of nearly 500 eggs daily and were on a ration which consisted of 75 per cent mash, a proportion of mash which could be digested only by very vigorous birds.

### Early Layers Best

By segregating the pullets that begin earliest to lay and comparing their record with that of pullets that began a little later Mr. Pierce has proved to his own satisfaction that early layers are the best producers. Last year 750 pullets were picked out at 3½ months by their comb development and other indications of approaching maturity, and these pullets produced from 6 to 10 per cent more eggs than the rest of the flock.

### Kelly Ranch

Half a mile below the Pierce Ranch on Arrowhead Avenue is another well equipped and very profitable poultry ranch, that of Mr. and Mrs. A. C. Kelly. The eggs from the Kelly ranch find a steady market at the Arrowhead Sanitarium for disabled soldiers, where they bring the highest retail price the year around.

Mrs. Kelly has made a very careful study of the problems of chick raising, and last year lost only ten per cent out of 2000 chicks the first ten weeks, an unusual record for a large flock. She showed me a beautiful lot of pullets hatched January 3, some 800 or 900 in all, with hardly a cull in the bunch. Cockerels from this hatch were removed from the third week on, or as soon as their sex was evident, and were fattened and sent to market when they weighed about one pound each. One hundred eight weeks old cockerels sold for $160, and 300 later for $120, and there were still about 300 in the flock. Mrs. Kelly figured on getting enough for her cockerels to cover the $360 the chicks cost.

### Careful Feeding

The nursery feed of the baby chicks is chick feed and oat flakes mixed half and half. This mixture is fed for three days, and water and grit are before them. The third day mash is fed at 9 a. m., one quart of mash being allowed to 200 chicks. The same day they are given their first meal of green feed, which consists of alfilaria cut fine. Mrs. Kelley considers alfilaria the best of all greens for chicks.

After another three days, during which they learn to eat mash and

Petaluma Electric Incubator Co., Petaluma, Calif.

greens, the chicks are put on this schedule:

Grain at daylight, mash at 9 a. m., greens at 11 a. m., grain at 1 p. m., grain at 4 p. m.

They are allowed all the grain they will eat, but the allowance of mash is limited at first to a quart to 200 chicks per day. After three days the amount is increased to 1½ quarts to 200 chicks, and then is very slowly increased till at the age of ten weeks nine gallons of buttermilk mash is allowed daily for a flock of 800 pullets. This limiting of the mash, Mrs. Kelly believes, is largely responsible for the fact that there has been no coccidiosis in her flock this year.

Clean, commodious, well ventilated houses, the best possible drainage and most exacting care all combine to make the Kelly ranch profitable and interesting. As we drove away over a boulevard smooth as glass I could not help recalling the days 30 years ago and more when Riverside young folks used to drag through the sand and a wilderness of sage brush over that same road for picincs at Arrowhead. It was an all day trip then from Riverside to Arrowhead and back. Now boulevards through a country dotted with attractive ranches make it a short pleasure drive and San Bernardino reaches almost to the foot of the grade.

## RABBITS FOR MARKET

By William A. Bixler

SPEAKING from experience, it is my opinion that there is as much real money in raising rabbits for the meat pen as in raising them for fancy stock to be sold for breeding purposes only.

Rabbits bred from select does and bucks for fancy stock must necessarily receive more care and there are fewer litters. They bring fancy prices where there is a market for such stock, but the same purebred stock bred and fed to produce weight will bring more and heavier animals for the meat pen.

It is possible to breed Red and White New Zealands, American Blues and Flemish Giants so that the young will average four pounds at two months of age. As there is a steady demand for young rabbits during this season at a market price of 18 to 20 cents a pound, live weight, it is plain to see what a doe will produce in dollars and cents.

Many people of California consider domesticated rabbit an important part of their dinner menu. One buyer in Los Angeles sends trucks to neighboring towns as far distant as 80 miles and handles from 400 to 600 rabbits a week. Many others are also handling large quantities. At all well regulated meat markets, if there are any to be had, can be found dressed rabbit.

Rabbit buyers demand that the prevailing price be for rabbits weighing four pounds and under; but it is a fact that the flesh from animals of a more mature age has a more delicious flavor when properly cooked.

Some people have the idea that because the rabbit will eat anything, green weeds, vegetable tops, apple and potato parings, etc., that this is all the feed necessary. Let me drop a word of warning right here, it is not safe to feed green tops from vegetables purchased at the market as sometimes poisons are used on vegetables to kill insects.

It is true that young rabbits will eat green feed, but their flesh will not be as firm nor will they put on weight as fast as when fed more solid food.

The best feed to produce good firm flesh is rolled barley and dry alfalfa hay. Growing rabbits for market should be fed about all they will clean up twice a day; the barley in a small crock and the hay in a feeder made of one-inch mesh woven wire. Hay should never be thrown loose into the hutch for the rabbits to tramp on.

Plenty of clean fresh water should be kept in the hutch at all times. Good airy, sanitary hutches with plenty of room are conductive to rapid, healthy growth.

---

Kerosene is a satisfactory engine fuel only in engines built for the purpose.

## SONOMA EGG LAYING CONTEST

The 43 entries of 10 birds each with two alternates, all Single Comb White Leghorn pullets, finished the first month of the third annual contest at Petaluma with an average production of 35.6 per cent for November. Production for the first week was 35.5 per cent, 32.1 per cent for the second week, 37.2 per cent for the third week of eight days, and 38.2 per cent for the fourth week of eight days. It will thus be seen that the birds have overcome the handicap of moving, changed quarters, etc., and the egg production is increasing.

### Feed

The following ration is being used in the contest this year: Mash: 160 pounds, bran 100 pounds mids, 130 pounds ground corn, 60 pounds ground barley, 50 pounds 50 per cent protein beef scrap, 50 pounds 58 per cent protein fish scrap, 15 pounds charcoal and three pounds salt. The grain mixture is based on the following proportions of 200 pounds cracked corn, 100 pounds wheat, 100 pounds recleaned whole barley.

During the month the birds consumed an average of 2.6 pounds mash, 3 pounds mixed grains and 4.4 pounds green feed per bird. Feeding of a damp, crumbly mash was started November 15 and 225 pounds were consumed by the flock during the remaining part of the month. During the first week the birds were fed grain at the rate of 12 pounds per hundred hens per day, for the purpose of building up their body weight. However, as shown in the above figures it was found that they were not consuming sufficient mash and the grain feed was cut down to ten pounds per hundred hens which resulted in a greater consumption of mash. The total consumption of feed, grain and mash per hen for each week period for the month was first 1.08 pounds, second 1.22 pounds, third 1.51 pounds, fourth 1.52 pounds. It will thus be seen that the consumption of feed increased as the rate of production of eggs increased.

### Feeding Schedule

At 7:30 a. m., 10 per cent of the daily grain ration; 10 a. m., chopped green feed, barley and kale, which lasts until approximately 3:30 p. m.; 12 m, crumbly mash, 14 pounds of the laying mash mixed with finely chopped greens and water; 4 p. m., 90 per cent of the daily mixed grain ration; 4:30 p. m., another feeding of chopped greens sufficient to last until approximately 9 o'clock the following morning. Shell, grit and charcoal are kept in the hoppers before the birds at all times.

### Electric Lights

Starting November 1, the first day of the contest, the lights were turned on at 5 a. m. Starting the second week they were turned on at 4:45 a. m., the third week at 4:30 a.m. They will be continued thus throughout the winter and spring until approximately February 15.

### High Pens First Month

P: Nielsen, Petaluma, 22; T. B. Purvine, Two Rock, 22; J. E. Iddings, Two Rock, 22; T. B. Purvine, Two Rock, 22; M. D. MeLeod, Sebastopol, 22.

## SOUTHERN CALIFORNIA EGG LAYING CONTEST

Total production for the contest flock for November was a little less than that for October but about five per cent higher than that for the same month last year. M. & M. Poultry Ranch S. C. R. I. Red won high place for the month with a production of 26 eggs. Two Leghorns tied for second place with 25 each.

### Highest Pens

Average eggs: Geo. B. Wilken, 14.67. Highland Ranch, 13.97. Ferd Heying (S. C. R. I. R.) 13.52. C. H. Taylor, 13.27. M. L. Frick, 13.23. Geo. F. Dair, 12.47. J. P Steward, 11.67. J. D. Jacks, 10.97. Frick, 8.44. S. S. Foote (Brd. P. R.) 8.37.

### Highest Birds

Average eggs: M. & M. Poultry Ranch (S. C. R. I. R.) 26. E. Phipps, 25. Frick, 25. Blackman & Mumford, 24. Heying, 24. Geo. F. Dair, 24. Taylor, 24.

### Highest Birds to Date

Blackman & Mumford, 51. M. & M., 49. Heying, 48. Taylor, 45. E. Phipps, 45. Dair, 45. E. E. Eisenberg, 44. Heying, 44. Taylor, 43. Blackman & Mumford, 43. Wilken, 43. J. P. Steward, 43.

## UTAH BUYS CHICKS FROM SONOMA COUNTY

Benjamin Brown and H. Metzger, representing the Utah State Poultry Association, visited California recently to place an order for 100,000 chicks. The first visit was made to Sonoma County where M. W. Buster, assistant farm adviser, and E. R. Temperli, inspector for the Sonoma County farm bureau accredited hatcheries, showed them around the poultry districts of the county and explained to them thoroughly the organization and operation of the breeding projects being conducted in this county, particularly the Sonoma County farm bureau accredited hatchery project. The result was that they placed their entire order with a number of the Sonoma County farm bureau accredited hatcheries instead of dividing with other poultry sections of the state as they had originally intended.

---

The largest oil producing area of the United States is known as the Mid-Continent field, embracing Kansas, Oklahoma, Northern and Central Texas, Northern Louisiana and Arkansas. Nearly 55 per cent of the country's oil comes from this section.

---

The meal hour should be a happy, cheerful one. Avoid if possible discussion of business affairs. Remember that "A meal well chatted is half digested."

---

A laugh is worth a hundred groans in any market.—Charles Lamb.

# The Prize Winners

Practically all the prizes in the White Leghorn Division at the Oakland Show of 1922—the big Annual California Poultry Show—were awarded to the California White Leghorn Breeding Farms of Lankershim, Calif.

## The Best Producing Strains

In our breeding pens you will find thousands of carefully selected heavy-laying hens from the prominent blood lines of the world, known for high-egg production, such as Hanson and Druce of Corvallis, Oregon; Tancred, Hollywood Farms, and Beal of Washington; Ferris of Michigan; Pennsylvania Poultry Farms; Hillview Farms, Illinois; and Tom Barron of England.

*We guarantee 100% fertility in all hatching eggs by replacement of all infertile eggs.*

**Hatching Eggs**
15 for $2
In 100 lots, 12c each
In 500 lots, 11c each
In 1000 lots, 10c each

**Baby Chicks**
In 100 lots, 25c each
In 500 lots, 24c each
Lots of 1000 or over, 23c each

**ORDER NOW, as our hatching capacity is only 20,000 for 1923, and bookings are coming in rapidly. If you order by mail, enclose a check for 10% of purchase and fix date for deliveries.**

Come and Visit Us at any Time - Sundays and Holidays Included

## The California White Leghorn Breeding Farms

*Location:.. 3 miles north of Lankershim on Lankershim Blvd., then 2 blocks west on Tulare Street.*

Lankershim, Los Angeles Co., Calif. R. R. 1, Box 277K

# 100,000 Chicks Died Last Night — Roup Killed Them

That's probably true, for that means only one death to every 64 farms in America—a ridiculously small average during Roup time. Millions of chickens killed yearly by this terrible disease. Don't let Roup get a start. Stop it quickly with

(97) Conkey's The Original **Roup Remedy**

**KILLS THE GERM — SAVES THE CHICKEN**

Just put it in the drinking water—chickens doctor themselves. It kills the Roup germs and saves the fowl. Keep it on hand and use it for prevention. Sold by dealers everywhere.

**CONKEY'S POULTRY TONIC** Keeps Hens Healthy and **GETS WINTER EGGS**

It is a Regulator, Laying Tonic, Moulting Powder and Chick Conditioner of the highest type. No cayenne pepper—no filler. CONKEY'S POULTRY BOOK is well worth 50c to anyone who keeps chickens. Sent for 6c in stamps.

THE G. E. CONKEY COMPANY 6586 BROADWAY, CLEVELAND, OHIO

Wholesale Distributors for Conkey Remedies and Feeds

# Learn an Auto Trade

**Big Pay Jobs Open in California**

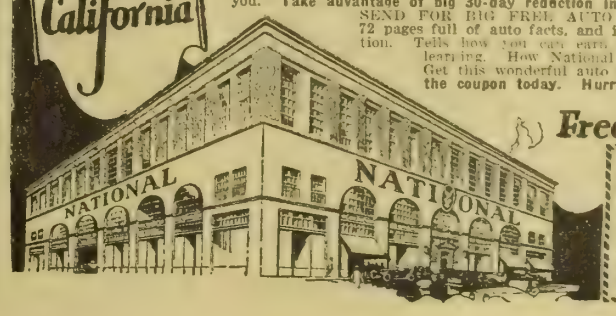
## Learn It Right—at National Automotive

Auto men needed in all branches of industry. Learn auto business. Thousands of opportunities to earn $100 to $400 a month in this big industry. Everywhere in California auto men are wanted. **Good jobs at big pay open now.** Garages needed. Auto experts can't be trained fast enough to supply demand. You're needed now in this money-making business. Be an electrician, mechanic, ignition expert, garage foreman or used car appraiser. Be independent and earn big pay. **Learn in National Automotive's big practical training shops.** Actual work on Packards, Cadillacs, Fords, etc. Use tools; not books. Expert mechanic instructors give you thorough training. You know autos after National training. Come to Los Angeles now—enjoy all year round summer climate.

***Special 19th Anniversary Low Tuition Offer***

Train in big new National Bldg. Across the street from 130-acre Exposition Park. Stadium, ball grounds, swimming pools, entertainment all FREE to you. **Take advantage of big 30-day reduction in tuition.**

SEND FOR BIG FREE AUTO BOOK explains everything. 72 pages full of auto facts, and illustrations of auto construction. Tells how you can earn your room and board while learning. How National finds YOUR job for YOU. Get this wonderful auto book now—it's FREE. Send the coupon today. Hurry!



**Free Auto Book**

## FIGHTING H. C. OF L. FOR FIFTY YEARS

**Celebrating its fiftieth anniversary, the St. Gall Consumers' Association has just given a huge banquet to its 9,901 shareholders and employes at St. Gall, Switzerland, where a report of its life and struggle for half a century was read. Organized in 1872 for the purpose of supplying the public principally with foodstuffs and the necessities of life at a minimum price, without the intervention of the middleman, this association is but one of many such successful societies in Switzerland, says Consul Willrich, St. Gall, in a report to the foodstuffs division of the United States department of commerce. The association had two splendid buildings in St. Gall and branch establishments at other places in that and other Swiss cities. It is growing from year to year, and keeps down the prices of foodstuffs to a reasonable level.**

# KIRKMAN NURSERIES

EST. 1888

5,000,000 Trees and Vines in Our Nurseries

*"The Scrapers That Move the Earth"*

GUARANTEED TO MOVE TWICE AS MUCH DIRT AS ANY OTHER SCRAPER ON THE MARKET, WITH THE SAME HORSE POWER IN THE SAME LENGTH OF TIME.

## The Miskin Tractor Scraper

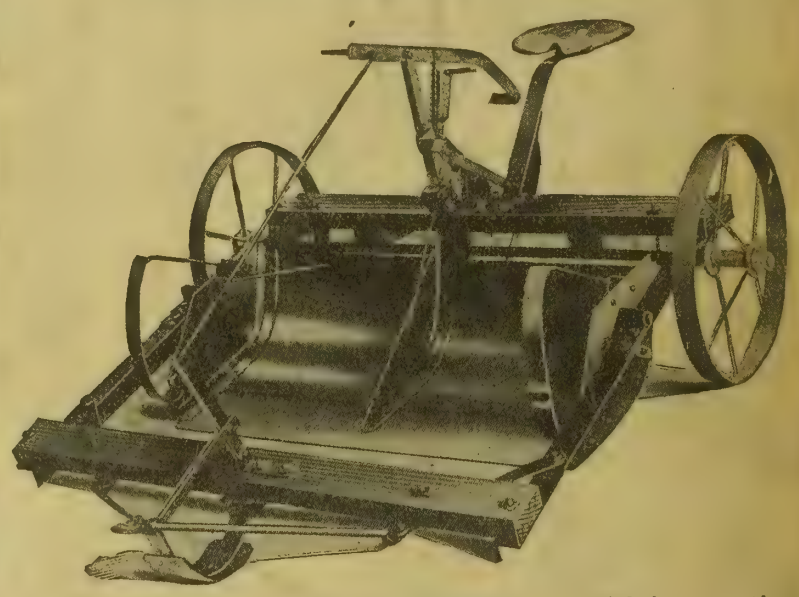
The tractor carries the front, the scraper wheels carry the balance of the scraper, loaded or empty.

Easy to fill with the lever at the side of tractor driver's seat and easy to dump and spread with the rope. NO STOPPING NOR BACKING UP.

Made in four sizes, from one-half to one and one-fourth yard capacity. We recommend the No. 2 size for most small tractors.

Sold with the same GUARANTEE of satisfaction or money refunded, that we have always given with our horse-drawn scrapers, for which we claim 100 per cent satisfaction.

## The Miskin Horse Scraper



This is the Famous Horse Miskin Scraper, which in operation, easy draft, greater capacity, and better work, has many advantages over the common Fresno and wheel scrapers now on the market. We pay the freight. Sold on approval.

**The Miskin Scraper Works**
"And It Works Like a Charm"
Ucon, Idaho
